Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

Introduction

The heavy engineering contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on the inside back cover. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups. (A complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, catalogue number 12-501.) Accordingly, the construction industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of industrial and heavy construction projects, other than building. Highway and road contractors are not included here, but are covered in catalogue number 64-206.

In addition to the primary specializations, this industry derives revenues from other types of contract construction (such as highways or building) as well as from other operations (such as sales of materials or consulting). Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the heavy engineering contracting industry is only a portion of the total value of construction performed in this category. A substantial amount of heavy engineering is done by the labour forces of such industries as hydroelectric utilities and mining. The total volume of this portion, often referred to as own account construction, amounts to between 38 and 40 percent of the total, put in place nationally. Also, between 15 and 25 percent of engineering work in the mining sector relates to services such as oil and gas well drilling, surveying and catering, and 12 to 15 percent is performed as a secondary construction activity by contractors specializing in other types of construction (such as highways or non-residential building).

Introduction

L'industrie des entrepreneurs en gros travaux de génie, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à l'intérieur de la couverture arrière les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs. (On trouvera dans la "Classification type des industries" de Statistique Canada, n° 12-501 au catalogue, une définition complète des principes et des industries). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de tous les établissements de construction lourde et industrielle donc l'activité principale consiste à effectuer des travaux de construction et de réparation autre que des bâtiments. Les entrepreneurs de grandes routes et de chemins ne sont pas inclus ici; ils sont examinés dans la publication n° 64-206 au catalogue.

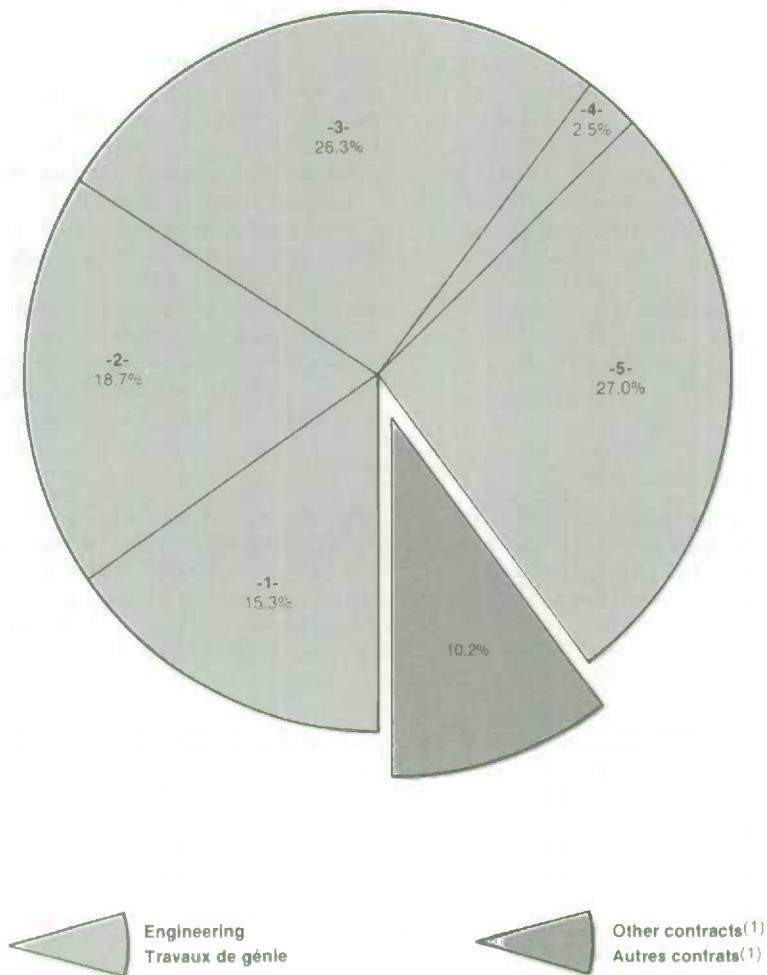

En plus de ses spécialisations principales, cette industrie tire des revenus d'autres genres de construction à contrat (tels que les grandes routes ou les bâtiments) ainsi que d'autres opérations (telles que la vente de matériaux ou la consultation). La figure I montre la distribution de la partie des revenus provenant de la construction à contrat.

L'activité de construction de l'industrie des entrepreneurs en gros travaux de génie ne représente qu'une partie de la valeur totale de la construction exécutée dans cette catégorie. Une grande partie des gros travaux de génie est accomplie par le personnel d'entreprises comme ceux des compagnies d'utilité publiques et les mines. Cette part, souvent appelée construction pour propre compte, compte au total pour 38 à 40% des travaux réalisés à l'échelle du pays. De plus, entre 15 et 25% des travaux de génie du secteur des mines concerne des services comme le forage de puits e pétrole et de gaz, l'arpentage et les services de traiteur, tandis que des entrepreneurs spécialisés dans d'autres genres de construction (tels que les grandes routes et les bâtiments non résidentiels), réalisent, à titre d'activité de construction secondaire, de 12 à 15% des travaux.

The 36.6% of total construction activity, shown in the figure above, for engineering construction, represents an absolute value of \$20,840,454,000 out of a total of \$56,883,932,000 for the total 1981 Canadian construction program (the third line, minus lines 46 to 49 and 80, divided by the total Construction line in text table IV). This value includes the industry output of \$4,996,828,251 (table I, items 3 to 7) as well as other industries' output and own account, as related earlier.

The proportion, by provinces, that the industry commands of the total market is reflected in figure III.

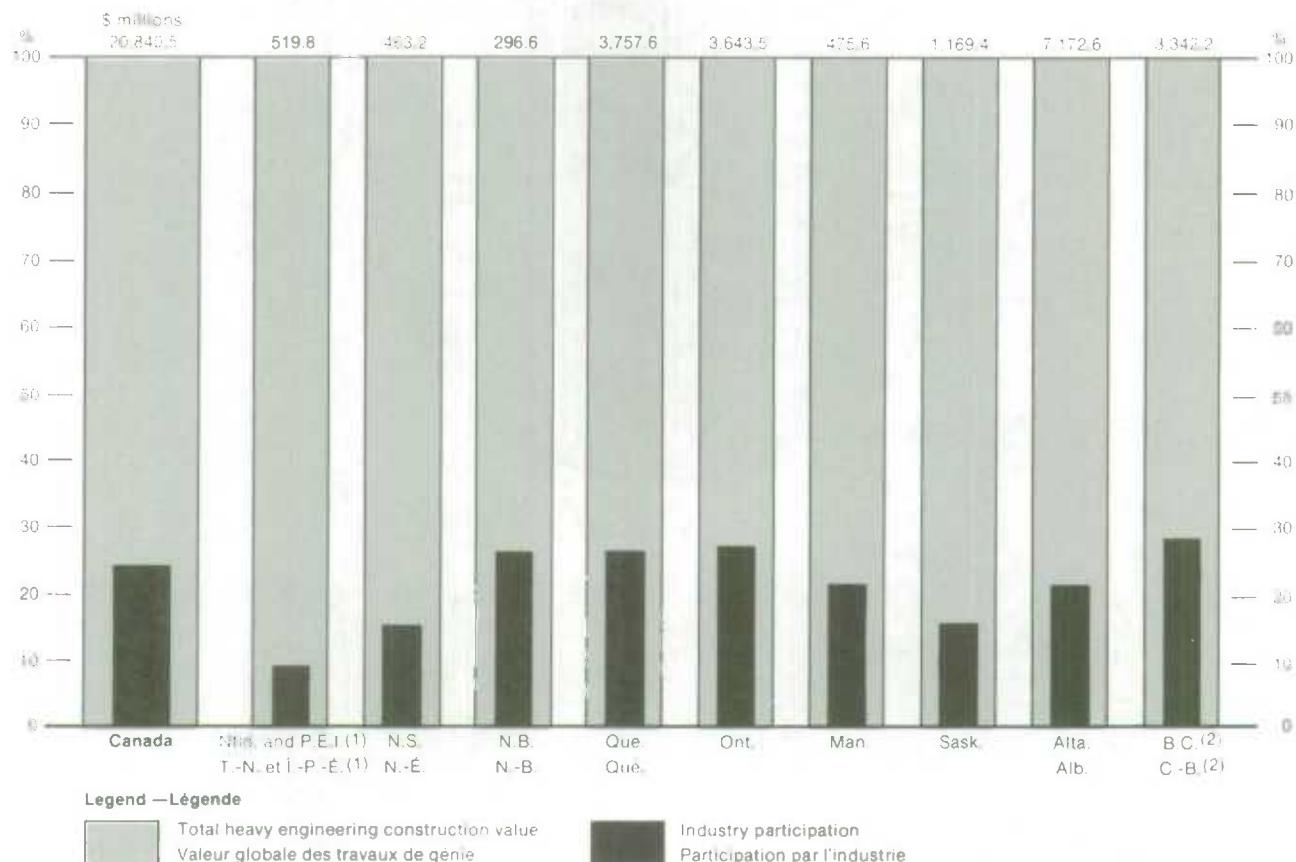

Le 36.6% des activités totale de construction, indiqué dans la figure ci-dessus pour les gros travaux de génie, représente, en valeur absolue, \$20,840,454,000, sur un total de \$56,883,932,000 pour l'ensemble de la construction au Canada en 1981 (la troisième ligne, moins les lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). Ce montant comprend la production de l'industrie, qui s'élève à \$4,996,828,251 (tableau I, postes 3 à 7) ainsi que la production d'autres industries et la production pour propre compte, tels qu'indiqués plus haut.

La figure III donne, par province, la proportion du marché total de la construction réalisée par l'industrie des entrepreneurs en gros travaux de génie.

GENERAL REVIEW

REVUE GÉNÉRALE

Census results for 1981 indicate that engineering contractors performed \$5,565,843,208 worth of construction work (Statistical table 1). This figure includes \$1,121,882,201 of work subcontracted out to the special trades. Additionally, a volume of \$108,559,541 of other revenues was generated, making the total operating revenue for the industry \$5,674,402,749. On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,529 establishments classified to this industry in 1981 were responsible for \$4,443,961,007 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions, first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

Among the four major specialization areas, water and sewer, electric power, gas and oil and other, the bulk of construction in gas and oil facilities, or 66.9% took place in the province of Alberta. In Quebec most of the electric power construction (52.8%) was put in place and most of the social infrastructure type construction, representing 34.5%, in the areas of water, sewer and other engineering, was done in Ontario.

Statistical table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and scale of plant. The largest 200 operations produce 77.8% of total output, the largest 425 produce 90.9% and the largest 497 produce 93.1%. With a 100 firm concentration ratio running at around 55% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical table 2) would indicate a plant size of between \$500,000 and \$749,999 dollars revenue size to have an optimum scale in this industry.

Increases in productivity among the larger size groups, indicate some returns to scale. Compared to other construction industry subgroups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a large extent achieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and

Les résultats du recensement de 1981 indiquent que les entrepreneurs en gros travaux de génie ont réalisé pour \$5,565,843,208 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$1,121,882,201 de travaux cédés en sous-traitance à des entrepreneurs spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$108,559,541, ce qui porte à \$5,674,402,749 les revenus de fonctionnement totaux de l'industrie. En ne prenant compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la sous-traitance), les 1,529 établissements classés dans cette industrie en 1981 ont réalisé pour \$4,443,961,007 de construction. Nous savons que le "total des revenus de constructin" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Dans les quatre principaux domaines de spécialisation (c.-à-d. canalisations et systèmes d'égouts, réseaux électriques, gaz et pétrole, et autres), la plus grande partie de la construction des installations de gaz et de pétrole (66.9%) a été exécutée en Alberta. Le pourcentage des dépenses totales consacrées à la construction de réseaux électriques a été le plus élevé au Québec (52.8%), en Ontario, les travaux d'infrastructure, principalement dans le domaine des canalisations et systèmes d'égouts et autres travaux de gros génie, ont dominé le secteur de la construction (34.5%).

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 200 plus grandes opérations produisent 77.8% de la production totale, les 425 plus grandes en produisent 90.9% et les 497 plus grandes en produisent 93.1%. Avec un taux de concentration pour les 100 principales entreprises d'environ 55%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 2), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$500,000 et \$749,999.

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentation de la production s'accomplice dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'œuvre par les immobilis-

leasing. It should be noted that size groups are based on current dollars; this causes an artificial movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

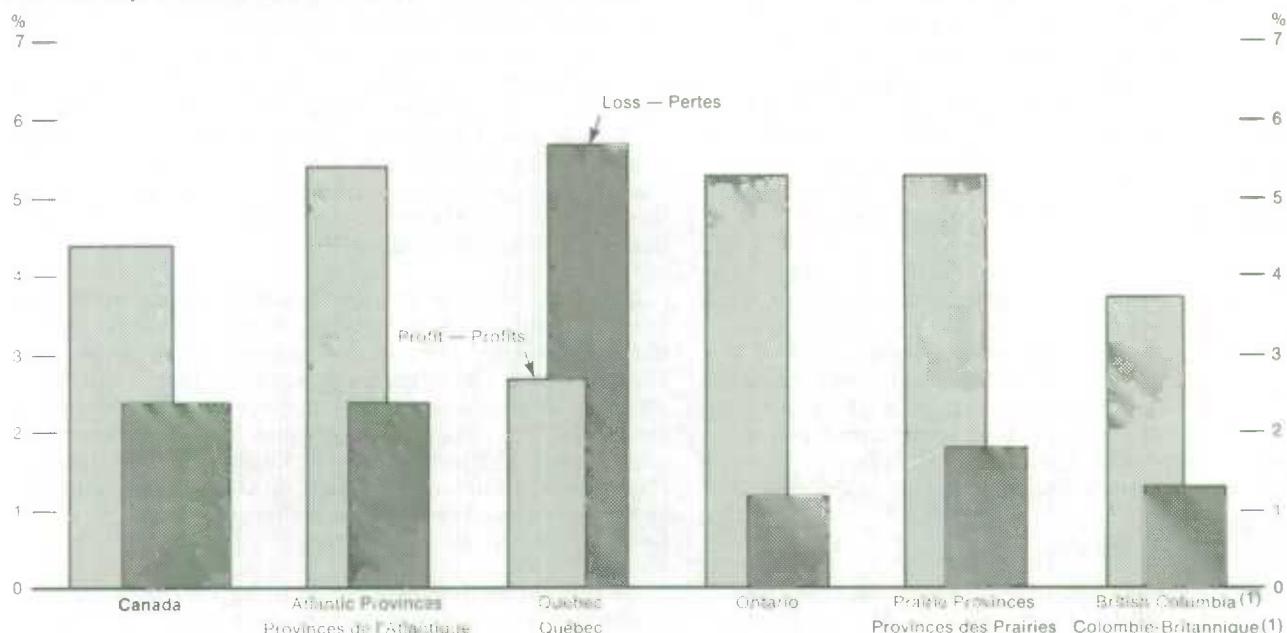

sations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a cross-classification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e. "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 provides operational information for establishments not grouped by revenue size as in table 1, but by major type of construction performed. Heavy industrial structures, recently re-classified from non-residential building to engineering, include smelters, paper mills, steel mills, cement plants and, generally

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recouplements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 donne des renseignements sur les opérations des établissements classés, non pas par tranche de taille comme dans le tableau 1, mais suivant le genre d'activité de construction. Les gros ouvrages industriels qui, à la suite d'une reclassification récente, ne sont plus classés parmi les bâtiments non résidentiels mais parmi les travaux de génie,

any project of which buildings constitute only a minor portion. Sub-contracting is relatively heavy in this area (24.3% of total operating costs) due to scale and complexity. Water and sewer facilities have a relatively high materials content (29.4%) due to the cost of installed equipment, and electric power facility construction is relatively labour intensive due to the nature of the contracted out work. Most of the latter is done by utilities on own account.

Table 4 presents a series of selected financial ratios based on income statement and balance sheet items reported in Table 2. While only the more commonly used financial ratios are published in Table 4, basic data for deriving additional ratios are available from Table 2.

Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for non-response or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from 85% to 90% for most of the various sub-industry groups. For census cycles beginning 1975, a blend of direct survey and random sampling methods is used to provide universe estimates.

For 1981, construction firms were separated by total operating revenue into two groups: those with more than \$500,000 annual revenue and those with annual revenue in the range of \$10,000 to \$500,000. The larger firms received the census long form, of which a copy is provided at the end of this publication. The smaller firms were stratified by sub-industry group size range and province, from which a sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10% and 50% for firms with less than \$50,000 annual revenue. Financial Data were collected for all firms with between \$375,000 and \$500,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e. operating characteristics and labour data) were collected for a sub sample of this group, numbering approximately 7,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate). The large and small firm results were then merged and tabulated to produce the tables contained in this publication.

Over the last three years a comprehensive review was undertaken of sampling procedures, data quali-

incluent les fonderies, les usines de pâtes et papiers, les aciéries, les cimenteries et, d'une façon générale, tous les ouvrages dont les bâtiments ne constituent qu'une petite partie. Il s'effectue beaucoup de sous-traitance dans ce secteur (24.3% du coût d'exploitation total) à cause de l'ampleur et de la complexité des travaux. Les canalisations et systèmes d'égouts comportent une proportion relativement élevée de matériaux (29.4%) à cause du coût du matériel installé, et la construction de réseaux électriques, dont une grande partie est réalisée pour leur propre compte par les entreprises de services publics, est relativement coûteuse en main-d'œuvre, à cause de la nature du travail cédé en sous-traitance.

Le tableau 4 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base du tableau 2 permettent de calculer d'autres proportions.

Méthodologie

Lors des recensements antérieurs à 1975, les données étaient recueillies directement au moyen de questionnaires et diffusées telles quelles. En d'autres termes, aucune estimation n'était faite pour tenir compte des non-répondants ou des entreprises non recensées. On savait toutefois que la plupart des entreprises omises étaient petites et que le volume, en dollars, que représentaient les entreprises recensées se situait entre 85% et 90% pour la plupart des divers sous-groupes de l'industrie. À partir de 1975, on s'est servi pour les recensements à la fois de l'enquête directe et de l'échantillonnage aléatoire pour obtenir des estimations visant l'ensemble de l'univers.

Pour 1981, les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leurs revenus d'exploitation: plus de \$500,000, et \$10,000 à \$500,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, qui est reproduit à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées par sous-groupe, tranche de taille et province avant qu'on ne tire de chaque strate, un échantillon pour la collecte de données financières et autres. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu d'exploitation se situait entre \$375,000 et \$500,000. Elles ont été tirées des dossiers administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d. les caractéristiques d'exploitation et les données sur la main-d'œuvre) on a envoyé à un sous-échantillon de ce groupe, comprenant environ 7,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres obtenus de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque enregistrement de l'échantillon. D'après les calculs, ce coefficient de pondération était égal à l'inverse de la probabilité d'inclusion de l'entreprise dans l'échantillon (fraction de sondage). Les résultats des grandes et des petites entreprises ont ensuite été regroupés et mis en forme pour produire les tableaux de la présente publication.

Au cours des trois dernières années, on a entrepris un examen général des techniques d'échantillonnage, de la quali-

ties and methodologies employed in the generation of the Census of the Construction Industry small firm universe. As a result of this review, improvements were made possible. Statistical users familiar with previous year issues of this publication will note that the 1981 data show an increase in population and activity level some of which is attributable to these improvements.

FURTHER INFORMATION

The data presented in this publication represent only a selected portion of the total available statistical information on the heavy engineering contracting industry. Additional breakdowns, statistics and definitions are available on request to users subject to the conditions of the Statistics Act. Please contact the Construction Division of Statistics Canada for this.

té des données et des méthodes utilisées pour établir l'univers des petites entreprises du recensement de l'industrie de la construction. Cet examen a permis d'apporter certaines améliorations. Les utilisateurs de statistiques qui connaissent bien cette publication pour en avoir consulté les numéros antérieurs noteront que les données de 1981 indiquent une augmentation de la population et du niveau d'activité, augmentation attribuable en partie à ces améliorations.

RENSEIGNEMENTS SUPPLÉMENTAIRES

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1981, sur les entrepreneurs en gros travaux de génie. On peut obtenir sur demande d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Division de la construction de Statistique Canada.

Footnotes

- (1) The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other construction" includes airport runways, parking lots.
- (4) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, engineering fees, sand blasting, etc.
- (5) All values in Tables 2 and 4 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (6) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (7) "Working capital" is defined as the excess of current assets over current liabilities.
- (8) British Columbia includes Yukon and Northwest Territories.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (11) Total capital employed is the sum of long-term liabilities and equity.
- (12) Due to changes in the Standard Industrial Classification, which were implemented during this census cycle, coverage was altered. As a result a shift of establishments from the Non-Residential Building Industry to the Heavy Engineering Industry may have taken place in certain areas.

Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres travaux de construction" comprennent les pistes de roulement d'aéroports, terrains de stationnement.
- (4) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, honoraires de génie, jet de sable, etc.
- (5) Toutes les informations dans les tableaux 2 et 4 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (6) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce regroupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (7) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (8) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (11) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.
- (12) Le champ d'application a été modifié à cause de changements dans la Classification type des industries entrés en vigueur pour ce cycle de recensement. Suite à ces changements, il est possible qu'un nombre d'établissements se sont déplacés de l'industrie non-domiciliaire vers l'industrie des travaux de génie.
