International Travel Survey

OVERSEAS RESIDENT TRIPS TO CANADA

MICRO DATA FILE DOCUMENTATION

1999

BACKGROUND

The International Travel Survey (ITS) is an ongoing survey conducted by Statistics Canada since the 1920s to meet the requirements of the Canadian System of National Accounts (Balance of Payments (BOP)). Through the years, the need for detailed characteristics of travellers for market research and industry planning was gradually incorporated in the survey. Today, the ITS provides a full range of statistics on the volume of international travellers and detailed characteristics of their trips such as expenditures, activities, places visited and length of stay.

The ITS covers both Canadian residents returning from trips outside Canada and international visitors to Canada. In addition to fulfilling BOP requirements, the ITS is also being used by the Tourism Satellite Account (TSA), Customs Canada, the Canadian tourism Commission (CTC), provincial tourism agencies, the United States Department of Commerce and a number of private sector industries. The ITS is also used for reporting to international organizations such as the World Tourism Organization (WTO), the Organization for Economic Co-operation and Development and the Pacific-Asia Tourism Association.

DATA COLLECTION METHODS

The ITS has two main data collection methods: Frontier Counts and Questionnaire Surveys. Both these methods depend greatly on the cooperation of Revenue Canada, Customs Border Services in the collection of the number of crossings and the distribution of travel questionnaires. The following is a brief description of each of these methods.

Frontier Counts - Travellers Entering or Re-entering Canada

With the help of Revenue Canada, Customs Border Services, all ports of entry across Canada participate in determining the number of travellers by selected categories, by type of transportation, as well as the number of cars, trucks, motorcycles and bicycles in the case of highway and ferry points. As of 1998, all port of entry traveller counts are conducted on a census basis. Prior to then, seven ports of entry were estimated based on a sampling method to estimate United States and Canadian vehicles and travellers.

International Travel Characteristics - Questionnaire Surveys

Continuous questionnaire surveys are used to secure quarterly information on the expenditures and other characteristics of the international traveller. These are sample survey, where questionnaires are distributed only to part of the traveller population. The questionnaires are handed out to the travel party on entry by Canada Customs officials according to pre-arranged schedules. Although about 40,000 questionnaires were received from non-resident parties entering Canada in 1998, these numbers represent less than 1% of the total traffic.

All international travel surveys operated by the International Travel Section use the stint distribution system at all border ports sampled. A stint consists of a selected period of several days during which each questionnaires are to be distributed to eligible travellers. Each port involved in this scheme receives, for each of its stints, a specific quantity of numbered questionnaires and a date on which to start the distribution. On the start date, the officers hand out the questionnaires on a continuous basis to the appropriate travelling population until they have all been distributed. The Liaison staff of the International Travel Section calls each port the day before the stint is to start to make sure that the questionnaires have arrived and to remind the officers to start the distribution the next day. Approximately 10 days after the start of the stint, the port is contacted again to ascertain the finishing date. In this way, the response rate of each stint, the coverage rate of the traffic and the length of the stint can all be used as a measure of performance for each stint.

One of five questionnaires is handed out to the travel party on entry or re-entry to Canada by Canada Customs officials. The questionnaires are distributed to the following:

- ***Residents of countries other than the United States visiting Canada;***
- United States travellers visiting Canada;
- United States residents visiting Canada by auto on the same day (less than 24 hours);
- Canadian residents returning from trips outside Canada;
- Canadian residents leaving and returning to Canada by auto on the same day (less than 24 hours).

The questionnaire is then completed by a member of the travelling party and returned to Statistics Canada. Only those questionnaires acceptable to the edit system are subsequently used in estimation. In order to produce quarterly estimates, the responses are weighted to represent the whole population.

CONCEPTS AND DEFINITIONS

International Traveller

The term international traveller applies to all persons arriving in Canada who are cleared through Customs and Immigration points of entry. Any person may cross into Canada more than once in the same period. The method of collection counts each crossing made. The numbers, therefore, represent numbers of crossings (entries or re-entries), not individual travellers. The term international traveller is divided into three groups: non-resident traveller, resident traveller and other traveller.

Non-resident Traveller

A non-resident traveller is an international traveller resident of a country other than Canada who passes through Canada Customs on a visit for a period of less than 12 months. Canadian citizens residing in other countries coming home on leave are included. This category comprises persons entering Canada for the following reasons:

- business, commuting to work, seasonal or temporary employment;
- attending a convention, conference or seminar;
- study, summer resident;
- visiting friends or relatives;
- pleasure, holiday, vacation, health and shopping; and
- persons travelling in transit who clear Canada Customs.

Resident Traveller

A resident traveller is an international traveller resident of Canada who has travelled outside of Canada for a period of less than 12 months for the same reasons as given above and who is returning to Canada through Canada Customs. Foreign citizens, who are residing in Canada, travelling abroad on leave or for other reasons are included.

Other Travellers

Other traveller include the following types of international travellers:

- **Immigrants.** Citizens of other countries entering Canada to take up permanent residence for more than one year.
- **Former residents.** Canadian citizens returning to Canada to re-establish permanent residence after residing outside Canada for more than one year.
- **Military personnel, diplomats and dependents.** Canadian citizens and dependents who have been stationed abroad for more than one year and who are returning from postings. Foreign citizens and dependents entering Canada on military or diplomatic posting.
- **Crews.** Persons engaged in the operation of a transport: air, sea, truck crews, etc.

Type of entry in the country

Travellers are grouped by type of entry and mode of transportation used to enter or re-enter Canada. Four categories are found:

Direct to Canada

Non-residents entering or Canadian residents returning from countries other than the United States directly to Canada, regardless of the mode of transportation used to enter or returning to the country.

Via the United States - by land - same-day trip

Non-residents entering or Canadians returning from countries other than the United States through or by way of the United States. The length of stay in the United States has no bearing on the classification, a person could be in transit through the United States or could have stayed several days. Three examples follow: a non-resident visiting the United States who during his visit enters Canada would be counted as entering via the United States; a non-resident entering direct to Canada who visits the United States during his trip would be counted direct on his first entry and via the United States on his second entry; and, a returning resident vacationing in the southern United States who travels to the Caribbean or other countries during his trip would be classified as returning via the United States. This latter group is difficult to identify at the border point and may be categorized as returning from the United States only.

International Travel Survey

Travel by land includes automobile, bus and rail traffic as well as cycle (bicycle, motorcycle) and pedestrian. Included is traffic entering on ferries either by car or foot.

In this category only travellers entering and leaving Canada in less than 24 hours are included.

Via the United States - by land - overnight trip

Same definition as above except that the trip duration must be more than 24 hours.

Via the United States - by other methods

This category includes travellers entering and exiting Canada via the United States by a mode of transportation other than land regardless of the trip duration. Other modes of transportation include persons travelling by air or sea using commercial and charter services. Also included are persons travelling in owned or rented planes or boats whereby a fare has not been charged for an individual seat. Plane owned or rented by companies to transport employees to business meetings are included.

Travel Party

Persons from the same country travelling together (whether they are from the same household or not) who agree to report collectively their trip characteristics.

Party composition

The travel party composition refers to the number of adults and/or children who are part of the same travel party.

Person-trip

Each time a non-resident traveller enters Canada marks the beginning of a person-trip. The traveller's entry is recorded by Canada Customs. The person-trip concludes when the traveller leaves Canada. For residents, each time a person departs from Canada, a person-trip begins. The person-trip ends when the traveller returns to Canada. His/her re-entry is recorded by Canada Customs.

Same-day trip

Same-day travel encompasses travellers who enter and leave the country in less than 24 hours. This category includes persons resident in one country and commuting daily to and from work in another country.

Overnight trip

Travel of one or more nights includes travellers staying at least 24 hours in a country other than that in which he/she resides. This classification closely approximates the term «tourist» although including temporary and seasonal workers, students, and in transit travellers.

Purpose of Trip

The main reason for the trip to a country is generally summarized as follows:

- **Business.** Includes attending a meeting or convention, a conference, trade show or seminar, or other work.
- **Visiting friends or relatives.**
- **Pleasure.** Includes holiday, vacation, visiting second home, cottage or condo, and attending events and attractions.
- **Other purposes.** Includes personal, in transit, shopping, educational study and other.

Origin or Residence

The origin or residence is the place of last permanent residence normally summarized by census region for United States residents, by country for other residents and by province for Canadian residents.

Area of Destination

The area of destination is the place in a country where the traveller spends most of his/her time. If two or more main areas are inserted on the questionnaire, they are coded and split in the tabulation according to the number of nights spent in each area.

Mode of transportation

The mode of transportation to *enter* and *exit* Canada is captured as well as any mode of transportation that was used to travel *while in* Canada or other country.

Trip duration

A trip starts when a person crosses the border and ends when he/she leaves the country. The trip duration is measured by the number of nights a traveller spends in Canada.

Person-trip-night

Each night a non-resident traveller spends in Canada, or a resident traveller spends outside Canada, during a person-trip is considered a person-night.

Visit

A **non-resident traveller** may stay in several locations on one trip to Canada; each stay represents a visit. A **resident traveller** may cross into several countries or states before being recorded as having re-entered Canada; each of these crossings represents a visit. Estimates of visits are derived from sample questionnaire surveys.

Same-day visit

On the course of a same-day trip, a non-resident traveller may visit different location(s); each location visited will be assigned a visit. However, only one location is captured on a same-day trip. On the course of an overnight trip, every location visited where the respondent has not spent a night is recorded as a same-day visit.

Overnight visit

An overnight visit can only be done on an overnight trip. In such a case, the location visited is defined as the location where the respondent has spent at least one night. If, during the same trip, multiple nights are spent at the same location, or the same location is travelled to multiple times, only one visit is recorded for that location.

Person-visit

Same-day or overnight visit made by a person taking a trip.

The total number of person-visits made by a travellers is the total number of visits made by each person, on each travel party, on each trip taken.

Visit duration

The visit duration is measured by the number of nights a visitor spends in a specific location in the visited location.

Person-visit-night

One night spent in the visited location by a person taking a trip e.g. a person who spends three nights in the visited location has a count of three person-visit-nights at that location.

Accommodation

The accommodation used in each location visited: Hotel, Motel, Home of friends or relatives, Camping or trailer park, Cottage or cabin and Other.

Activities

Travellers report all activities in which that have taken part during the *trip* rather than during their *visit*. For this reason, an activity cannot be associated to a precise location. For example, during the same trip, a person may visit Vancouver and Whistler, and declare having done some downhill. In this case, when compiling data, the «downhill skiing» activity will be attributed to both Vancouver and Whistler. However, since activity information is only collected at the trip level, this activity may have occurred only in Vancouver or only in Whistler.

As well, in the ITS, activities are not available for visitors on same-day trips by car.

Expenditures

Trip expenditures made by all persons in the travelling party who went on the trip. Expenditures may have been paid for by individuals, by government or by a private sector business. In the ITS, the expenditures are broken down in the following categories: accommodation, transportation in Canada (include gasoline expenditures, rented car, intercity plane, bus and train fares, boat tours, local bus, taxi), food and beverage, recreation and entertainment, and other (souvenirs, shopping, photos, etc.). Expenditures are reported in Canadian dollars and do not represent where money was spent on a specific trip, but rather how much money was spent, and in which category of expenditures. It is associated with a trip as a whole.

Census Metropolitan Area (CMA)

Main labour market area of an urbanized core having 100,000 or more population. For more details, refer to the Standard Geographical Classification SGC 1991.

Census Division (CD)

Areas established by provincial laws which are intermediate geographic areas between the municipality (Census Subdivision) and the province level. Census Divisions represent counties, regional districts, regional municipalities and other types of provincially legislated areas. For more details, refer to the Standard Geographical Classification SGC 1991.

Tourism Region (TR)

From a touristic point of view, homogeneous regions defined by each province.

MICRO DATA FILE

The micro data file of the International Travel Survey (ITS) contains information on the travel habits of Overseas residents travelling to Canada. Here are the different characteristics available on the Overseas micro data file:

Trip characteristics:

- Date of exit and re-entry (Day, month, year);
- Canadian border crossing at entry and exit (land port, airport, seaport);
- Route used to enter and exit Canada;
- Mode of transportation used while in Canada;
- Purpose of trip;
- Activities;
- Rating of different aspects of trip compared with country of residence (transportation, accommodation, hospitality, value of money, variety of things to do and see);
- International transportation costs (fares paid to all carriers other than Canadians and Americans);
- Total trip spending (less fares);
- Spending by category;
- Percentage of expenditures paid personally by travellers, by business and by government;
- Indicator of ownership of accommodation;
- Number of nights spent in US before entering Canada;
- Country of residence;
- Travelling party size;
- Factor group code;
- Person factor weight.

Demographic characteristics:

- Age group of each traveller;
- Sex of each traveller.

State-visit or country-visit characteristics:

- Place visited (province, tourist region, census division) (max. of 15);
- Length of stay in place visited (number of nights);
- Accommodations used in place visited.

ESTIMATION METHOD

For estimation purposes, the responses obtained through the questionnaire surveys must be treated as a simple random sample from the total traffic in each stratum (port or group of ports, by type of traffic, by quarter). The data may in fact be subject to some degree of «distribution bias» due to the fact that not all categories of travellers are represented in the handout, or to a «non-response bias» due to the fact that the individuals replying may not be representative of the population.

The number of questionnaires returned may be adequate if the above restrictions could be evaluated. In 1990, such an evaluation was done. Results from this study on selected Québec and Ontario ports can be obtained from the International Travel Section of Statistics Canada. Weighting techniques used in the estimation process attempt to reduce the effect of biases. Response is disaggregated by known characteristics into homogeneous groups. For example, three main groups are United States automobiles entering and leaving same-day, those staying on night and those staying two or more nights. Further, the port or area of entry is established for each group to take into account geographical distribution prior to the application of weights. In one quarter (three-month period), 605 individual weights are applied in the estimation of expenditures and trip characteristics of international travellers.

SAMPLING VARIABILITY

The International Travel Survey (ITS) is based on data gathered from only a part (sample) of the population. It is important to mention that results are only estimations of «true» values. These results are, therefore, only estimates of the «true» values for the Canadian population, values which could only be obtained through a census. Since differences always exist between sample and census data, statistical measures have been developed which indicate the expected size of the differences. Such measures allow analysts to assess the reliability of statistics produced from sample surveys.

The expected difference between the sample estimate and the corresponding census value is known as the sampling variability. The CV is the standard error of an estimate expressed as a percentage of the estimate.

As a rule, the larger of two estimates will have a smaller CV, and therefore will be more reliable. Also, of two estimates of the same size, the one referring to a characteristic more evenly distributed throughout the population will tend to have a smaller CV.

The application of the CV to the ITS data has been simplified. When the CV is between 16,6% and 25,0%, data must be used with caution due to high sampling variability. When it is over 25,0%, the data is not reliable, sampling variability being too high. Only data with sampling variability less than 16,6% can be used without restriction.

WEIGHTING PROCEDURE

The ITS weighting procedure is based on *Person Factor Weight (PERSFAC)*, where:

$$\text{PERSFAC} = \frac{\text{Volume counts (Customs) of persons in the factor group}}{\text{Number of sampled persons in the factor group}}$$

Factor Groups (SGRCODE) for Overseas Residents are:

- *based on Type of entry (Direct, Via the U.S. - Land Same-day, Land 1+ Nights and Other), and*
- *based on BOP country grouping.*

For more details, please refer to the « *Overseas Factor Groups* » section.

<u>Type of entry</u>	<u>No. of Factor Groups</u>
Directly from overseas	59
Via the U.S. : Land Same-day	59
Land One plus Nights	59
Other	59

All information collected on the Overseas residents questionnaire will refer specifically to the travelling party. The person weight will be used to calculate all estimates.

The following section gives an overview of the Overseas weighting by components. For a more detailed explanation of ITS Weighting Methodology, please refer to subject matter area: Tourism Statistics Program, International Travel Section, Statistics Canada. Tel.: 613-951-9169; Fax: 613-951-2909.
