International Travel Survey
OVERSEAS RESIDENT TRIPS TO CANADA
MICRODATA FILE DOCUMENTATION
2008

BACKGROUND

The International Travel Survey (ITS) is an ongoing survey conducted by Statistics Canada since 1920 to meet the requirements of the Balance of Payments of the Canadian System of National Accounts (BOP). Through the years, questions directed at collecting detailed characteristics of travellers for market research and industry planning were gradually incorporated in the survey. Today, the ITS provides a full range of statistics on the volume of international travellers and detailed characteristics of their trips such as expenditures, activities, places visited and length of stay.

The ITS covers both Canadian residents returning from trips outside Canada and international visitors to Canada. In addition to fulfilling BOP requirements, the ITS is also being used by the Tourism Satellite Account (TSA), Canada Border Services Agency (CBSA), the Canadian tourism Commission (CTC), provincial tourism agencies, the United States Department of Commerce and a number of private sector industries. The ITS is also used for reporting to international organizations such as the World Tourism Organization (WTO), the Organization for Economic Co-operation and Development (OECD) and the Pacific-Asia Tourism Association (PATA).

DATA COLLECTION METHODS

The ITS consists of two main components: the frontier counts and the questionnaires. Both these methods depend greatly on the co-operation of CBSA in the collection of the number of border crossings and the distribution of questionnaires. The following is a brief description of each of these methods.

Frontier Counts – International Travellers Entering or Canadians Re-entering Canada

The frontier count component is simply an enumeration of all international travellers recorded on forms used by Canada Border Services officials to register entries into Canada. In the 18 largest international airports, data is recorded on Customs Declaration (E-311) cards. Number of travellers, country of residence and type of entry¹ are captured from these forms for the estimation of frontier counts by flow and airport. With each airport classified as large, medium or small², data capture is done on a sample basis for several combinations of flows and port sizes, and on a census basis for the remaining combinations. Since the 1920's CBSA has supplied Statistics Canada with administrative data on all international travellers who have been cleared for entry into Canada.

1 Type of entry applies to Canadian and overseas travellers only. For Canadian travellers, there are three types of entry: from the U.S. only, directly from overseas, from overseas via the U.S. In the case of overseas travellers, there are two types of entry: directly to Canada, to Canada via the U.S.

2 The large airports are Montreal-Trudeau, Toronto (T1 and T3), Calgary and Vancouver. Medium-large size airports are Halifax, Winnipeg and Edmonton and Ottawa is a medium-small size airport. Small size airports are St. John's, Gander, Quebec (Ancienne-Lorette), London, Saskatoon, Regina and Victoria.

The main objective of the survey is to produce traveller flows for the administrative use of different government departments and to satisfy the requirements of the Balance of Payments. The Frontier Counts survey provides a full range of statistics on the number of international travellers by several categories (country of residence, type of transportation, etc.) as well as the number of automobiles, trucks and other vehicles (motorcycles, snowmobiles, bicycles) entering Canada. These data are also used in weighting the questionnaire component of the survey.

Questionnaires - International Travel Characteristics

The questionnaire component of the survey is used to secure quarterly information on the characteristics of international travellers and trips. These details include purpose of trip, size of travelling party, places visited, activities participated in during the trip, length of trip and trip spending. This component of the survey is used to update the Canadian Balance of International Payments. In addition, the federal and provincial governments, the tourism industry, businesses and the general public use quarterly and annual estimates of international trip and traveller characteristics.

The questionnaires are obtained via the mail-back questionnaire survey and the air-exit survey of overseas travellers.

Mail-back questionnaires survey

This is a sample survey, where questionnaires are distributed only to part of the traveller population. Canada Border Services officials hand out the questionnaires to the travel party on entry according to pre-arranged schedules. A stint distribution system has been developed to survey international travellers based on previous year's traffic. A stint consists of a selected period of several days during which questionnaires are to be distributed to eligible travellers. Each port involved in this scheme receives, for each of its stints, a specific quantity of numbered questionnaires and a date when to start the distribution. On the start date, the officers hand out the questionnaires on a continuous basis to the appropriate travelling population until they have all been distributed. Respondents are requested to mail back their completed questionnaires in Canada (for Canadian and overseas travellers) or in the United States (for U.S. travellers). The number of questionnaires distributed in 2007 was about one million questionnaires for all flows.

Canada Border Services officials hand out one of five questionnaires to the travel party on entry or re-entry to Canada. The questionnaires are distributed to the following:

- **Residents of countries other than the United States visiting Canada (or Overseas residents);**
- United States travellers visiting Canada;
- United States residents visiting Canada by auto on the same day (less than 24 hours);
- Canadian residents returning from trips outside Canada;
- Canadian residents returning from the United States by auto on the same day (less than 24 hours).

Air Exit Survey of overseas travellers

In the case of overseas travellers returning directly to selected overseas countries, additional questionnaires are obtained via the Air Exit Survey (AES). At the international airports in five cities (Halifax, Montreal, Toronto, Calgary and Vancouver), Statistics Canada's interviewers conduct personal interviews with overseas travellers as they await their return flights to targeted overseas countries. These interviews are conducted each month and the collection period lasts 5 to 7 days. In 2007, about 8,000 interviews were completed. The targeted countries are those from which we attract the most visitors. They include principally the United Kingdom, France, Japan and Germany as well as a number of smaller markets, such as the Mexico, Australia, South Korea and China. The interviewing team consists of interviewers of different language skills, enabling interviews to be conducted in the native language of the travellers where possible. The questionnaire is available in 10 languages.

CONCEPTS AND DEFINITIONS

International Traveller

The term international traveller applies to all persons arriving in Canada who are cleared through CBSA points of entry. Any person may cross into Canada more than once in the same period. The method of collection counts each crossing made. Therefore, the figures represent the number of crossings (entries or re-entries), and include double counting of travellers who cross the border more than once in the time period. The term international traveller is divided into three groups: non-resident traveller, resident traveller and other traveller.

Non-resident Traveller

A non-resident traveller is an international traveller resident of a country other than Canada who is cleared through CBSA points of entry on a visit for a period of less than 12 months. Canadian citizens residing in other countries coming to Canada on leave are included. This category includes persons entering Canada for the following reasons:

- Business, business meetings, commuting to work, seasonal or temporary employment;
- attending a convention, conference or seminar;
- educational study; summer resident;
- visiting friends or relatives;
- pleasure, holiday, vacation, attend events or attractions, shopping;
- personal reasons (medical, wedding, etc.)
- persons travelling in transit who clear Canada Customs.

Resident Traveller

A resident traveller is an international traveller resident of Canada who has travelled outside of Canada for a period of less than 12 months for the same reasons as given above and who is returning to Canada through Canada Border Services Agency. Foreign citizens, who are residing in Canada, travelling abroad on leave or for other reasons are included.

Other Traveller

Other travellers include the following types of international travellers:

- **Immigrants.** Citizens of other countries entering Canada to take up permanent residence for more than one year.
- **Former residents.** Canadian citizens returning to Canada to re-establish permanent residence after residing outside Canada for more than one year.
- **Military personnel, diplomats and dependents.** Canadian citizens and dependents who have been stationed abroad for more than one year and who are returning from postings. Foreign citizens and dependents entering Canada on military or diplomatic posting.
- **Crews.** Persons engaged in the operation of a transport: air, sea, truck, train, etc.

Type of entry in the country

Resident travellers and non-resident travellers from countries other than the United States are grouped by type of entry used to enter or re-enter Canada. There are four categories:

Direct to Canada

Non-residents entering or Canadian residents returning from countries other than the United States directly to Canada, regardless of the mode of transportation used to enter or leave Canada.

Via the United States - by land - same-day trip

Non-resident travellers entering or Canadians returning from countries other than the United States through or by way of the United States. The length of stay in the United States has no bearing on the classification, a person could be in transit through the United States or could have stayed several days. Three examples follow: a non-resident visiting the United States who during his visit enters Canada would be counted as entering via the United States; a non-resident entering direct to Canada who visits the United States during his trip would be counted direct on his first entry and via the United States on his second entry; and, a returning resident vacationing in the southern United States who travels to the Caribbean or other countries during his trip would be classified as returning via the United States. This latter group is difficult to identify at the border point and may be categorized as returning from the United States only.

Travel by land includes automobile, bus and rail traffic as well as cycle (bicycle, motorcycle) and pedestrian. Included is traffic entering on ferries either by car or foot.

In this category, only travellers entering and leaving Canada in less than 24 hours are included.

Via the United States - by land - overnight trip

Same definition as above except that the trip duration must be more than 24 hours.

Via the United States - by other methods

This category includes non-resident travellers entering or Canadians returning from countries other than the United States via the United States by a mode of transportation other than land regardless of the trip duration. Other modes of transportation include persons travelling by air or sea using commercial and charter services. Also included are persons travelling in owned or rented planes or boats whereby a fare has not been charged for an individual seat. Plane owned or rented by companies to transport employees to business meetings are included.

Travel Party

Persons from the same country travelling together (whether they are from the same household or not) who are willing to report collectively their trip spending and activities.

Party composition

The travel party composition refers to the number of adults and/or children who are part of the same travel party.

Person-trip

Each time a non-resident traveller enters Canada marks the beginning of a person-trip. The traveller's entry is recorded by Canada Border Services Agency (CBSA) officials. The person-trip concludes when the traveller leaves Canada. For residents, each time a person departs from Canada, a person-trip begins. The person-trip ends when the traveller returns to Canada. His/her re-entry is recorded by CBSA.

Same-day trip

Same-day travel encompasses travellers who enter and leave a country in less than 24 hours. This category includes persons resident in one country and commuting daily to and from work in another country.

Overnight trip

Travel of one or more nights includes travellers staying at least 24 hours in a country other than that where he/she resides. This classification closely approximates the term «tourist» although it includes temporary and seasonal workers, students, and in transit travellers.

Purpose of Trip

The main reason for the trip to a country is generally summarized as follows:

- **Business.** Includes attending a meeting or convention, a conference, trade show or seminar, or other work.
- **Visiting friends or relatives.**
- **Pleasure.** Includes holiday, vacation, visiting second home, cottage or condo, and attending events and attractions.
- **Other purposes.** Includes personal, in transit, shopping, educational study and other.

Origin or Residence

The origin or residence is the place of last permanent residence normally summarized by census region for United States residents, by country for other residents, and by province for Canadian residents.

Area of Destination

The area of destination is the place where the traveller spends most of his/her time. If two or more main areas are listed on the questionnaire, they are coded and split in the tabulation according to the number of nights spent in each area.

Mode of transportation

The mode of transportation to *enter* and *exit* Canada is captured as well as any mode of transportation that was used *while in* Canada or the country visited.

Trip duration

A trip starts when a person crosses the border and ends when he/she leaves the country. The trip duration is measured by the number of nights a non-resident traveller spends in Canada or the number of nights a resident traveller spends outside Canada.

Person-trip-night

Each night a non-resident traveller spends in Canada, or a resident traveller spends outside Canada, during a person-trip is considered a person-night.

Visit

A **non-resident traveller** may stay in several locations on one trip to Canada; each stay represents a visit. A **resident traveller** may cross into several countries or states before being recorded as having re-entered Canada; each of these crossings represents a visit. Estimates of visits are derived from the questionnaire component.

Same-day visit

On the course of a same-day trip, a traveller may visit different location(s). However, only one location is captured on a same-day trip. On the course of an overnight trip, every location visited where the respondent has not spent a night is recorded as a same-day visit.

Overnight visit

An overnight visit can only be done on an overnight trip. In such a case, the location visited is defined as the location where the respondent has spent at least one night. If, during the same trip, multiple nights are spent at the same location, or the same location is travelled to multiple times, only one visit is recorded for that location.

Person-visit

Same-day or overnight visit made by a person taking a trip. The total number of person-visits is the total number of visits made by each person, in each travel party, on each trip taken.

Visit duration

The visit duration is measured by the number of nights a visitor spends in a specific location.

Person-visit-night

One night spent in the visited location by a person taking a trip. For example, a person who spends three nights in the visited location has a count of three person-visit-nights in that location.

Accommodation

The accommodation used in each location visited: Hotel, Motel, Home of friends or relatives, Camping, Cottage or cabin and Other.

Activities

Travellers report all activities in which they have taken part during the *trip* rather than during their *visit*. For this reason, an activity cannot be associated with a precise location. For example, during the same trip, a person may visit Vancouver and Whistler, and declare they have done some downhill skiing. In this case, when compiling data, the «downhill skiing» activity will be attributed to both Vancouver and Whistler. However, since activity information is only collected at the trip level, this activity may have occurred only in Vancouver or only in Whistler.

Activities are not available for American or Canadian travellers on a same-day trip by car.

Expenditures

Trip expenditures made by all members of the travelling party. Expenditures may have been paid for by individuals, by government or by a private sector business. The expenditures are broken down into the following categories: accommodation, transportation in Canada (include gasoline expenditures, rented car, intercity plane, bus and train fares, boat tours, local bus, taxi), food and beverage, recreation and entertainment, and other (souvenirs, shopping, photos, etc.). Expenditures are reported in Canadian dollars or are converted to Canadian dollars.

For the non-resident travellers, the expenditures do not represent where money was spent on a specific trip, but rather how much money was spent, and in which category of expenditures. It is associated with the trip as a whole.

For resident travellers, two sets of expenditures are reported. One set includes a breakdown by category; another set includes a breakdown by country visited.

Fares

For non-resident travellers, amount spent by all members of the travelling party on commercial transportation (plane, bus, train or boat) to travel to and out of Canada. For resident travellers, amount spent by all members of the travelling party on commercial transportation to travel out and back to Canada or outside Canada. Fares are reported in Canadian dollars or are converted to Canadian dollars. For travellers from the United States, both Canadian and U.S. fares are available. For travellers from countries other than the United States, only Canadian fares are available. For resident travellers, up to a maximum of 12 different fares are available according to the country of residency of the carrier used (including Canadian, U.S. and other foreign fares). For countries other than the United States, only the Canadian fare is available.

Census Metropolitan Area (CMA) and Census Agglomeration (CA)

CMAs are defined as the main labour market area of an urbanized core having 100,000 or more population. Smaller urban areas, with an urban core with populations of at least 10,000 are defined as CAs. For more details, refer to the Standard Geographical Classification SGC 2001.

Census Division (CD)

Areas established by provincial laws that are intermediate geographic areas between the municipality (Census Subdivision) and the province level. Census Divisions represent counties, regional districts, regional municipalities and other types of provincially legislated areas. For more details, refer to the Standard Geographical Classification SGC 2001.

Tourism Region (TR)

From a touristic point of view, homogeneous regions defined by each province.

SURVEY PROCESSING

Like all Statistics Canada surveys, the ITS has many processing stages. All mail-back and AES questionnaires are manually edited for completeness and consistency, and the reported data are captured, coded and verified. In particular, a certain amount of editing must be done involving the breakdown of expenses on package tours into spending components, the calculation of derived variables and the separation of reported data for trips that involved multiple entries into Canada.

A certain amount of data imputation is performed in the ITS. Missing transportation fares and/or total trip spending are imputed if the remainder of the fields on the questionnaire is valid.

Total imputation (i.e. imputation of complete questionnaires) is also performed for any in-scope Port Factor Groups (PFGs)³ for which we have received an insufficient number of questionnaires for the quarter. In these instances, all the questionnaires from the same quarter of the previous year that belong to the PFG are brought forward and added to the sample of that PFG for the reference quarter.

WEIGHTING

As with the other flows, the overseas travellers are stratified into PFGs. Each traveller is coded by country of residence (or, in some instances, combinations of countries) to obtain a country group (SGR) code. The SGR is then cross-classified with the type of entry⁴ to obtain the PFG. All overseas questionnaires (from both the regular distribution and the AES) are weighted to ensure that the derived weighted estimates of the number of travellers correspond to the frontier counts by PFG.

For overseas air travellers originating from the four major SGRs (the United Kingdom, Germany, France, and Japan), information on the duration and purpose of trip is collected from their Customs Declaration (E311) cards on a census basis at the national level. Using this information, a second stage bias adjustment is done to the initial weights of the questionnaires completed by these travellers to better reflect the distribution of duration of trip and purpose of trip obtained from the E311 cards.

A third stage, called the regional weighting adjustment, is performed in the weighting of overseas questionnaires. Using the raking-ratio statistical technique, this procedure ensures that the derived estimates of the number of travellers from the questionnaires closely match the frontier counts at the region of entry level (by type of entry), while maintaining an exact match at the SGR level. In addition, for 61 pre-identified SGR/region of entry/type of entry combinations, the weights assigned to the questionnaires are adjusted so

³ In the International Travel Survey, the target populations (American, Overseas and Canadian international travellers) are partitioned into Port Factor Groups, based on selected traveller characteristics, such as country of residence, mode of entry and duration of stay.

⁴ There are four categories of type of entry: directly from overseas, via the U.S. by land for same-day trips, via the U.S. by land for overnight trips, and via the U.S. by air or sea.

as to obtain an exact match to the corresponding frontier counts. Referred to as Direct Weighting Groups (DWGs), these SGR/region of entry/type of entry combinations represent portions of the overseas travel market with high volumes of travellers and for which we obtain a sufficient number of questionnaires. Also, the DWGs have been selected so that there are sufficient questionnaires left over in the non-selected combinations to ensure convergence of the raking-ratio technique.

SURVEY ESTIMATION

For estimation purposes, the responses obtained through the questionnaire surveys must be treated as a simple random sample from the total traffic in each stratum (port or group of ports, by type of traffic, by quarter). The data may in fact be subject to some degree of «distribution bias» due to the fact that not all categories of travellers are represented in the distribution, or to a «non-response bias» due to the fact that the individuals replying may not be representative of the travelling population.

Weighting techniques used in the estimation process attempt to reduce the effect of biases. Responses are disaggregated by known characteristics into homogeneous groups. For example, each country grouping is divided into four types of entry (directly from overseas, via the U.S. by land for same-day trips, via the U.S. by land for overnight trips, and via the U.S. by air or sea). Further, the region of entry is established for each group to take into account geographical distribution prior to the application of weights.

Using the calculated weights, estimates can be obtained for a variety of trip and traveller characteristics. These estimates take the form of totals, averages and percentages, and can be obtained at different geographical levels.

SAMPLING VARIABILITY

The ITS is based on data gathered from only a part (sample) of the population. It is important to mention that results are only estimations of «true» values. These results are, therefore, only estimates of the «true» values for the travelling population, values which could only be obtained through a census. Since differences always exist between sample and census data, statistical measures have been developed which indicate the expected size of the differences. Such measures allow analysts to assess the reliability of statistics produced from sample surveys.

The expected difference between the sample estimate and the corresponding census value is known as the sampling variability. The coefficient of variation (CV) is the standard error of an estimate expressed as a percentage of the estimate. As a rule, the larger of two estimates will have a smaller CV, and therefore will be more reliable. Also, of two estimates of the same size, the one referring to a characteristic more evenly distributed throughout the population will tend to have a smaller CV.

Because of the complex nature of the ITS design, simple variance calculations using standard methods tend to under-estimate the variance. For the ITS, Statistics Canada uses the bootstrap method of variance

MICRODATA FILE

The microdata file of the ITS contains information on the travel habits of overseas residents travelling to Canada. Here are the different characteristics available on the overseas residents microdata file:

Trip characteristics:

- Date of entry and exit (Day, month, year)
- Canadian border crossing at entry and exit (land port, airport, seaport)
- Route used to enter and exit Canada
- Mode of transportation used while in Canada
- Purpose of trip
- Activities
- Rating of different aspects of trip in Canada (transportation, accommodation, hospitality of local people, value of money, variety of things to do and see)
- International transportation costs (fares paid to Canadian carriers)
- Total trip spending (less international fares)
- Spending by category
- Percentage of expenditures paid personally by travellers, by business and by government
- Indicator of ownership of accommodation
- Number of nights spent in US before entering Canada
- Number of nights spent in Canada
- Number of nights by province
- Number of person-visits by province
- Country of residence
- Travelling party size
- Weighting factor group code (SGR)
- Person factor weight

Demographic characteristics:

- Composition of travelling party by age group and sex

Places visited:

- Place visited (province, tourism region, Census Metropolitan Area /Census Agglomeration, Census Division) (max. of 15)
- Length of stay in place visited (number of nights)
- Accommodations used in place visited

estimation. Under this method, the sampling units are sub-sampled and re-weighted many times over (the ITS currently uses 200 bootstrap sub-samples). From these sub-samples an estimated variance is obtained to derive the CV.

WEIGHTING PROCEDURE

The *initial* ITS weighting procedure is based on *Person Factor Weight* (**PERSFAC**), where:

$$\text{PERSFAC} = \frac{\text{Volume counts (Customs) of persons in the factor group}}{\text{Number of sampled persons in the factor group}}$$

Factor Groups for Overseas Residents are:

- **based on BOP country grouping (SGRCODE)**
- **based on Type of entry (Direct, Via the U.S. - Land Same-day, Land 1+ Nights and Other)**

For more details, please refer to the « **Overseas Factor Groups** » section.

| <u>Type of entry</u> | <u>No. of Factor Groups</u> |
|------------------------------|-----------------------------|
| Directly from overseas | 56 |
| Via the U.S. : Land Same-day | 56 |
| Land One plus Nights | 56 |
| Other | 56 |

Once the initial weights are assigned, a **second** stage, called the **bias adjustment** is done to the initial weights of the questionnaires completed by British, German, French and Japanese travellers to better reflect the distribution of duration and purpose of their trip obtained from their E311 cards.

A **third** stage, called the **regional weighting** adjustment, is performed in the weighting of overseas questionnaires. This procedure ensures that the derived estimates of the number of travellers from the questionnaires closely match the frontier counts at the region of entry level (by type of entry), while maintaining an exact match at the SGR level.

All information collected on the overseas residents questionnaire refer specifically to the travelling party. The person weight is used to calculate all estimates.

The following section gives an overview of the Overseas weighting by components. For a more detailed explanation of ITS Weighting Methodology, please refer to subject matter area: Tourism Statistics Program, International Travel Section, Statistics Canada Tel.: 613-951-9169 or 1-800-307-3382; Fax: 613-951-9040; (tourism@statcan.ca).

IMPORTANT - With the introduction of the **regional weighting** adjustment, the derived estimates of the number of travellers from the questionnaires match **exactly** the frontier counts at the SGR level nationally and regionally. However, the derived estimates only **closely** match the frontier counts by type of entry nationally and regionally.
