Errata – Supply and Distribution of Registered Nurses in Canada, 2000.

Please find attached an errata for Supply and Distribution of Registered Nurses in Canada, 2000.

Full Time / Part Time Status

You will find attached revised tables for the field 'Full Time / Part Time', for the following provinces and territories:

- Ontario
- Saskatchewan
- Northwest Territories

The following pages and tables have been revised and are attached: Pages - 36, 37 and 53 to 65; Tables - 4.0, 8.0, 14.0, 15.0, 16.0, 19.0, and 25.0.

If you have any questions, please contact Francine Anne Roy, Consultant, Nursing Databases at Tel: (613) 241-7860, Fax: (613) 241-8120, email froy@cihi.ca.

Employment Status

In 2000, the number of RNs employed in nursing in Canada was 232,412. Of those, 197,880 (85.1%) were employed on a regular basis, and 34,532 (14.9%) were employed on a casual basis.

As shown in Figure 4, the 2000 total represents the lowest percentage of casual employment in Canada since before 1994.

In fact, the number of RNs employed on a casual basis decreased in eight of twelve jurisdictions from 1999 to 2000, with only British Columbia, the Northwest Territories, and Nunavut experiencing an increase. The Yukon remained unchanged.

Figure 4. Percentage of RNs with Casual Employment, Canada, 1994-2000

As previously discussed, of the 254,628 registered nurses in Canada in the year 2000, 91.3% (232,412) were employed in nursing, 1.8% (4,506) were employed in other than nursing, 1.8% (4,490) were not employed, and 5.2% (13,220) did not state their employment status.

Full-Time/Part-Time Status

Figure 5. Percentage of RNs Employed in Nursing by Full-Time/Part-Time Status, Canada, 1994 and 2000

The percentage of RNs employed full-time in Canada is almost identical between 1994 and 2000 figures. In 1994, 54.9% (128,796) of RNs were employed full-time; in 2000, it was 55.0% (127,782).

The percentage employed part-time increased substantially, from 39.5% (92,570) in 1994 to 45.0% (104,581) in 2000. The percentage of 'Not Stated' records decreased from 5.6% in 1994 to less than 0.1% in 2000.

Accurate comparisons amongst the intervening years are difficult, as the percentage of 'Not Stated' records ranges between 1.6% and 10.3%. In comparison to 1999 data, however, the percentage of RNs working full-time increased from 51.1% to 55.0%, while the percentage working part-time decreased slightly (from 45.3% to 45.0%). The percentage of 'Not Stated' records decreased from 3.6% to less than 0.1%.

Table 9 compares the number and percentage of RNs by full-time/part-time status for each province/territory for 1994 and 2000.

Source: RNDB/CIHI

Notes:

CIHI data will differ from provincial/territorial data due to the CIHI collection period, the removal of interprovincial duplicates, and provincial/territorial data cleaning at year-end.

Data from 1994 have been revised from previous Statistics Canada RNDB publications.

British Columbia, Alberta, and Manitoba data prior to 1999 erroneously include non-practicing registrations, and are subject to future revision.

Northwest Territories/Nunavut data for the year 2000 were derived using a modified methodology.

Nunavut data were identified using the Postal Code of Residence, a method that undercounts the number of employed RNs. Please review the Methodological Notes for more comprehensive information regarding data collection and processing, data accuracy, and data comparability.

When comparing the provincial/territorial statistics presented in Table 9 above, the number of 'Not Stated' records must be noted; many apparent changes can be partially explained by a substantial decrease in the number of 'Not Stated' records.

Figure 6. Percentage of RNs Employed in Nursing by Age Group and Full-Time/Part-Time Status, Canada, 2000

In Canada, RNs aged 35 years or less are more likely to work part-time than RNs aged 50 years or older. Among the 48,787 RNs in Canada aged 35 years or less in the year 2000, 46.0% were employed full-time and 54.0% part-time. In contrast, among the 67,300 RNs in Canada aged 50 years or older, 61.2% were employed full-time and 38.7% part-time. Figure 6 illustrates this breakdown for 2000.

The average age of RNs employed full-time in 2000 was 44.3 years, compared to an average age of 42.1 years for RNs employed part-time.

CIHI data differ from provincial/territorial data due to the CIHI collection period, the removal of interprovincial duplicates, and provincial/territorial data cleaning at year-end.

Northwest Territories/Nunavut data for the year 2000 were derived using a modified methodology.

For the 2000 data year, Northwest Territories/Nunavut data defaulted blank responses in the field Full-Time/Part-Time Status as 'part-time'; in previous years blank responses were defaulted as 'not stated'.

Please review the Methodological Notes for more detailed information regarding data collection and processing, data accuracy, and data comparability.

CIHI data differ from provincial/territorial data due to the CIHI collection period, the removal of interprovincial duplicates, and provincial/territorial data cleaning at year-end.

Northwest Territories/Nunavut data for the year 2000 were derived using a modified methodology.

For the 2000 data year, Northwest Territories/Nunavut data defaulted blank responses in the field Full-Time/Part-Time Status as 'part-time'; in previous years blank responses were defaulted as 'not stated'. Please review the Methodological Notes for more detailed information regarding data collection and processing, data accuracy, and data comparability.

Other Positions includes data from: Clinical Nurse Specialist, Instructor/Professor/Educator, Researcher, Consultant, Other

Not Stated includes data from: Not Stated

CIHI data differ from provincial/territorial data due to the CIHI collection period, the removal of interprovincial duplicates, and provincial/territorial data cleaning at year-end.
Northwest Territories/Nunavut data for the year 2000 were derived using a modified methodology.British Columbia year 2000 data is not directly comparable to previous data for the categories of Chief Nursing Officer/Chief Executive Officer, Director/Assistant Director, and Manager/Assistant Manager.
For time-series analysis, it is more appropriate to compare British Columbia data by the broader grouping of 'Managerial Positions'.For the 2000 data year, Northwest Territories/Nunavut data defaulted blank responses in the field Full-Time/Part-Time Status as 'part-time'; in previous years blank responses were defaulted as 'not stated'.
Please review the Methodological Notes for more detailed information regarding data collection and processing, data accuracy, and data comparability.
