## Executive Summary

The Life After Service Studies (LASS) program of research is designed to further understand the transition from military to civilian life and ultimately improve the health of Veterans in Canada. LASS partners are Veterans Affairs Canada (VAC), the Department of National Defence/Canadian Armed Forces (DND/CAF), and Statistics Canada. LASS 2019 continues with the longitudinal component introduced in 2016 in two major studies: the survey of health and well-being, and the record linkage for pre- and post-release income trends. This technical report provides initial cross-sectional findings for Regular Force Veterans from the 2019 survey.

LASS 2019 survey data was collected by telephone between March 4<sup>th</sup> and May 10<sup>th</sup> 2019 by Statistics Canada interviewers who obtained a 72% response rate. Results describe Veterans who released (at post-entry ranks) from the CAF Regular Force between 1998 and 2018.

Findings indicate that 45% of Veterans reported an easy adjustment to civilian life, while nearly as many, 39%, reported difficulty. Officers had a lower rate of difficult adjustment (21%), compared to 35% of Senior Non-Commissioned Members (SrNCM) and 47% of Junior Non-Commissioned Members (JrNCM). Veterans with recent releases (between 2015 and 2018) had a higher rate of difficult adjustment (47%), compared to earlier releases between 1998 and 2015 (37%). Compared to those with earlier releases, these recently-released Veterans had higher rates of anxiety and depression and were less likely to be working as their main activity, all factors associated with difficult adjustment.

Veterans reported chronic conditions, including arthritis (35%), depression (26%), anxiety (21%), and post-traumatic stress disorder (PTSD) (24%), at higher prevalences than Canadians of comparable age and sex. SrNCM had the highest rate of arthritis (47%), and JrNCM had the highest rates of depression (31%), anxiety (25%), and PTSD (27%). Veterans also reported higher rates than Canadians for hearing problems, pain, and activity limitations. Since LASS 2013, the trend for chronic conditions has been increasing. In LASS 2019 there were significant increases in the rates of arthritis, high blood pressure, depression, anxiety, and PTSD compared to LASS 2016.

Most Veterans were employed (60%). SrNCM had a lower employment rate (50%) compared to Officers (58%), and JrNCM (66%). The unemployment rate for Veterans was 5%, similar to Canadians of comparable age and sex. Non-labour force activities for Veterans included retirement (21%), on disability (12%), and training (4%). Since LASS 2013, the trend for non-labour force activities has been increasing along with the average age of Veterans. The rates of retirement and disability were significantly higher in LASS 2019 compared to LASS 2016.

Some Veterans experienced low income (6%). This was lower than Canadians (12%, not age and sex adjusted), and has not changed significantly since LASS 2010. JrNCM had the highest rate (8%). Most Veterans were satisfied with their finances (72%) and the rate is not significantly different from LASS 2016. Officers had a higher satisfaction rate (90%) compared to SrNCM (77%), and JrNCM (62%).

When asked about the effect their release had on the family, the majority of Veterans reported that the transition was easy for their partner (54%) and their children (56%). However, 32% of Veterans indicated their partners had difficulty with their release, and 23% reported their children had difficulty with their release.

LASS findings have provided evidence to inform the efforts of both VAC and DND/CAF to support transition to civilian life. LASS 2019 findings will continue to contribute to improvements to programs, benefits, communications and outreach, to ultimately improve the health and well-being of Veterans in Canada.

## Sommaire

Le programme de recherche Études sur la vie après le service militaire (EVASM) vise à nous aider à mieux comprendre la transition de la vie militaire à la vie civile et en bout de ligne à améliorer la santé des vétérans au Canada. Les partenaires des EVASM sont Anciens Combattants Canada (ACC), le ministère de la Défense nationale/les Forces armées canadiennes (MDN/FAC) et Statistique Canada. Les EVASM 2019 continuent avec la composante longitudinale introduite en 2016 dans deux études importantes : l'enquête sur la santé et le bien-être et le couplage de données sur les tendances en matière de revenu avant et après la libération. Ce rapport technique fournit les premières constatations transversales de l'enquête de 2019 pour les vétérans de la Force régulière.

Les données de l'enquête dans le cadre des EVASM 2019 ont été recueillies par téléphone entre le 4 mars et le 10 mai 2019 par des intervieweurs de Statistique Canada qui ont obtenu un taux de réponse de 72 %. Les résultats décrivent les vétérans qui ont été libérés (à des grades postérieurs à l'entrée) de la Force régulière des FAC entre 1998 et 2018.

Les constatations indiquent que 45 % des vétérans ont déclaré que leur transition à la vie civile avait été facile, alors que cette transition a été difficile pour 39 % d'entre eux. Les officiers affichaient un plus faible taux de difficulté d'adaptation (21 %), comparativement aux militaires de rang supérieur (MR sup) (35 %) et aux militaires de rang subalterne (MR sub) (47 %). Les vétérans récemment libérés (entre 2015 et 2018) ont affiché un taux plus élevé de difficulté d'adaptation (47 %), comparativement aux vétérans libérés entre 1998 et 2015 (37 %). Comparativement aux vétérans libérés plus tôt, les vétérans récemment libérés affichaient un taux plus élevé d'anxiété et de dépression et étaient moins susceptibles d'avoir le travail comme activité principale, soit tous des facteurs associés à une adaptation difficile.

Les vétérans ont déclaré souffrir d'affections chroniques, comme l'arthrite (35 %), la dépression (26 %), l'anxiété (21 %) et l'état de stress post-traumatique (ESPT) (24 %), à un taux de prévalence plus élevé que dans la population canadienne de même âge et sexe. Le taux d'arthrite était le plus élevé chez les MR sup (47 %), alors que les MR sub affichaient les taux les plus élevés de dépression (31 %), d'anxiété (25 %) et d'ESPT (27 %). Les taux de problèmes d'audition, de douleur et d'incapacités fonctionnelles étaient plus élevés chez les vétérans que chez les Canadiens. Depuis les EVASM 2013, la tendance pour les affections chroniques a augmenté. En les EVASM 2019 il y a eu des augmentations significatives dans les taux d'arthrite, d'hypertension artérielle, de la dépression, d'anxiété, et de ESPT par rapport à les EVASM 2016.

La plupart des vétérans occupaient un emploi (60 %). Le taux d'emploi des MR sup (50 %) était inférieur à celui des officiers (58 %) et des MR sub (66 %). Le taux de chômage chez les vétérans était de 5 %, semblable à celui de la population canadienne de même âge et sexe. Les activités autres que main d'œuvre pour les vétérans comprenaient la retraite (21 %), l'état d'invalidité (12 %) et la formation (4 %). Les taux de retraite et de l'état d'invalidité étaient significativement plus élevés en les EVASM 2019 par rapport à les EVASM 2016.

Certains vétérans avaient un faible revenu (6 %). Le taux était inférieur à celui de la population canadienne (12 %, pas ajusté pour l'âge et le sexe), et il est inchangé depuis les EVASM 2010. Les MR sub affichaient le taux le plus élevé (8 %). La plupart des vétérans étaient satisfaits de leur situation financière (72 %) ce qui n'a pas changé significativement depuis les EVASM 2016. Les officiers affichaient le plus haut taux de satisfaction (90 %) comparativement aux MR sup (77 %) et aux MR sub (62 %).

Lorsqu'on a demandé aux vétérans quelle avait été l'incidence de leur libération sur leur famille, la plupart d'entre eux ont indiqué que la transition avait été facile pour leur partenaire (54 %) et leurs

enfants (56 %). Toutefois, 32 % des vétérans ont indiqué que leurs partenaires avaient de la difficulté avec leur libération, et 23 % ont indiqué que leurs enfants avaient eu de la difficulté avec leur libération.

Les résultats des EVASM ont permis de fournir des éléments de preuve pour documenter les efforts d'ACC et du MDN/FAC et appuyer ainsi la transition vers la vie civile. Les résultats des EVASM 2019 continueront de contribuer à l'amélioration des programmes, des avantages, des communications et de la sensibilisation, pour améliorer en bout de ligne la santé et le bien-être des vétérans au Canada.

# 1. Introduction

The Life After Service Studies (LASS) program of research is designed to enhance understanding of the transition from military to civilian life and ultimately improve the health of Veterans in Canada (VanTil 2011). LASS partners are Veterans Affairs Canada, the Department of National Defence/Canadian Armed Forces and Statistics Canada.

LASS includes two major studies: the survey of health and well-being, and the record linkage for pre- and post-release income trends. LASS 2019 survey expands on the earlier studies in 2010<sup>1</sup>, 2013<sup>2</sup>, and 2016<sup>3</sup>. LASS 2010 studied former Regular Force personnel who released from service during 1998-2007. LASS 2013 studied both Regular Force Veterans and Primary Reserve Force Veterans. LASS 2016 included new family content and longitudinal design methods in both major studies. LASS 2019 continues with the longitudinal design introduced in 2016 and includes Regular Forces Veterans who released during the twenty year period from 1998-2018.

Veterans<sup>4</sup> in Canada are former officers or non-commissioned members of the Canadian Armed Forces (CAF), Regular or Reserve<sup>5</sup>. As of March 2019, there were about 640,000 Veterans living among the general population in Canada. Of these, about 600,000 served after 1953.<sup>6</sup>

This report provides cross-sectional findings for Regular Force Veterans from the 2019 survey, many of which are indicators being used to measure how Veterans are doing in VAC's seven domains of well-being. The objective of this report is to describe the health and well-being of the 64,000 Regular Force Veterans who released from service (at post-entry ranks) during 1998 to 2018.

## 2. Methods

LASS 2019 survey design incorporated both cross-sectional and longitudinal design. The cross-sectional design represents Veterans who released from the Regular Force between 1998 and 2018. The longitudinal design follows Veterans of the Regular and Reserve Forces who participated in LASS 2013 and LASS 2016. Longitudinal results will be described in a subsequent report.

The LASS 2019 cross-sectional survey design describes Veterans who released from the Regular Force between 1998 and 2018. As in LASS 2016, entry ranks<sup>7</sup> were excluded from the survey. Statistics Canada removed out-of-scope records for Veterans residing in the three northern Territories, outside Canada or in an institution, those who were deceased, or who had re-enrolled in the CAF.

The LASS 2019 survey was stratified into three groups by rank<sup>8</sup> at release:

- Officers,
- Senior non-commissioned members (SrNCM),
- Junior non-commissioned members (JrNCM).

Survey data was collected from March 4<sup>th</sup> to May 10<sup>th</sup> 2019 by Statistics Canada interviewers using the Computer Assisted Telephone Interview. Survey questions for LASS 2019 are similar to LASS 2016<sup>9</sup> and used Canadian Community Health Survey (CCHS) modules where possible. Mastery questions, last seen in LASS 2013, were reintroduced in LASS 2019. The SF-12 series of questions was removed in LASS 2019 to make room for the entire HUI (Health Utility Index) series of questions. For the first time in LASS 2019 survey participants were asked both their sex at birth and their gender. Figure 1 shows the sample design, 72% response rate, and 92% agreed to share their data with VAC and DND.

Overall response rate for the Regular Force Veterans in the cross-sectional master file was 53%. This was calculated by combining the results of the cross-sectional releases since 2016 (65% response rate; n=1295) with the longitudinal nonresponse that occurred in previous cycles of the survey since 2013 (47% response rate; n=2105), and were re-weighted for the cross-sectional analysis.

LASS 2019 survey used stratified survey design as well as inclusion of the 2016 survey cohort and oversampling releases since the 2016 survey. This complex design requires all survey estimates and analyses to use sample weights, similar to the methodology of LASS 2016<sup>10</sup>. These weights were calculated by Statistics Canada to incorporate the unequal probabilities of selection, eligibility, non-response, and sharing. This report applied cross-sectional share weights using Stata SVY commands, and excluded missing responses from the denominator.

**Figure 1. LASS 2019 Cross-sectional Sample**

\*Source: VAC Facts & Figures, March 2019

\*\* 72% response rate in 2019; 53% response rate since 2013.

LASS 2019 indicators of well-being are defined in **Appendix 1**. Analysis in the main text of this report is drawn largely from the tables in the Appendices. Veterans in 2019 are described in a series of tables:

- **Appendix 2** lists the indicators by the three rank groups. Additional analysis is required to account for differences in age, sex, and other factors.
- **Appendix 3** lists the indicators by three age groups. Additional analysis is required to account for differences in sex, rank, and other factors.
- **Appendix 4** lists the indicators by sex. Additional analysis is required to account for differences in age, rank, and other factors.
- **Appendix 5** lists the indicators by the four LASS cycles in 2010, 2013, 2016 and 2019. This comparison used only post-entry rank releases for all 4 cycles. Confidence intervals were produced by Stat SVY commands and will differ from those produced using Statistics Canada bootstrap weights. Confidence intervals that do not overlap were considered statistically significant. Additional analysis is required to account for differences in age, sex, rank, and other factors, and to take into account the dependence of the 2013, 2016 and 2019 samples.
- **Appendix 6** lists the indicators by two periods of release: LASS 2019 recent release (2015 to 2018), and LASS 2019 earlier release (1998 to 2015). For comparison LASS 2016 is also listed (1998 to 2015). Additional analysis is required to account for differences in age, sex, rank, and other factors, and to take into account the dependence of the 2013, 2016 and 2019 samples.
- **Appendix 7** lists the indicators from 2019 compared to Canadian data. Most of the Canadian comparators were from the most recent Canadian Community Health Survey available (2015-16), age-sex adjusted to the Veteran population (who are predominantly younger and male).

Strengths of the LASS 2019 survey include the use of DND administrative data to identify Veterans and the use of Statistics Canada resources to survey participants and protect their confidentiality, and achieve a high response rate. The survey content used validated questions, mostly from national Canadian population health studies. Limitations of this report include the cross-sectional design that does not provide evidence about causal relationships between factors such as military service or VAC programs and well-being outcomes, but does allow quantification of the strength of association. Findings cannot necessarily be generalized to all Veterans; however the findings of this report are representative of Regular Force Veterans who released from 1998 to 2018.

### 3. Demographics

The average age of Regular Force Veterans participating in LASS 2019 was 50 years (see Table 1). JrNCM were younger (44 years), compared to SrNCM and Officers (both 57 years). The majority of Regular Force Veterans were male (87%) at the time of the survey; similar results are reported by sex.

The highest level of education attained at the time of the survey is described in Table 1. Overall, 18% of Regular Force Veterans had a university degree. Officers had the highest rate of university graduation (76%), compared to JrNCM (6%) and SrNCM (5%).

**Table 1. Demographic Indicators by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
	≤ 30	F	F	9%	5%	5%	F
	30-39	6%	F	32%	18%	18%	15%
	40-49	14%	16%	24%	20%	18%	27%
	50-59	39%	45%	29%	36%	35%	37%
	60+	40%	38%	7%	22%	23%	16%
<b>Sex</b>	Male	88%	89%	86%	87%		
	Female	12%	11%	14%	13%		
<b>Gender</b>	Male	88%	89%	86%	87%		
	Female	12%	11%	14%	13%		
	Other gender identity	F	F	F	F		
<b>Marital status</b>	Married/Common-law	87%	85%	72%	78%	80%	70%
	Widowed/Separated/Divorced	9%	10%	13%	11%	11%	15%
	Single, never married	4%	5%	16%	10%	10%	16%
<b>Education</b>	Less than high school graduation	F	6%	5%	4%	5%	F
	High school graduation	12%	51%	37%	37%	39%	28%
	Post-secondary graduation	11%	38%	51%	40%	39%	46%
	University degree	76%	5%	6%	18%	17%	24%

F = too few to calculate a reliable estimate

Since LASS 2016, the age of participants has increased (see Appendix 5). Appendix 3 lists the indicators by three age groups. The trends for sex and marital status have not changed while the proportion with a university degree has started to rise (see Appendix 5).

Compared to Canadians of similar age and sex, Veterans report higher rates of married or common-law (78% vs. 73%), and lower rates of post-secondary education (58% vs. 67%), see Appendix 7.

The large differences in the age and sex distribution of the Veteran population compared to the Canadian population require comparisons that adjust for age and sex.

## 4. Military Characteristics

The majority of Regular Force Veterans had service in the Army (51%), 32% in the Air Force, and 16% in the Navy (see Table 2). JrNCM had the highest rate of service in the Army (61%), compared to SrNCM (42%) and Officers (38%).

About half of Veterans had 20 or more years of military service, 54% of Regular Force Veterans (see Table 2). JrNCM had the lowest rate (25%), compared to Officers (79%) and SrNCM (91%). This pattern across rank groups was also observed for the rate of deployment during military service.

**Table 2. Military Characteristics by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Service Environment</b>	Air*	42%	37%	26%	32%	31%	43%
	Land*	38%	42%	61%	51%	53%	40%
	Sea*	20%	21%	13%	16%	16%	17%
<b>Enrolment Era</b>	1954-1975	26%	25%	F	13%	14%	F
	1976-1990	53%	63%	36%	47%	47%	45%
	1991-2000	11%	10%	17%	14%	14%	18%
	2001-2015	10%	F	45%	26%	25%	32%
<b>Length of Service</b>	< 10 years	9%	F	48%	27%	27%	31%
	10 to 19 years	13%	8%	27%	19%	17%	27%
	≥ 20 years	79%	91%	25%	54%	56%	42%
<b>Release Type</b>	Voluntary	80%	66%	60%	65%	66%	57%
	Involuntary	F	F	F	4%	F	F
	Medical	19%	33%	34%	31%	30%	42%
<b>Deployment</b>	Deployed during military service	79%	90%	67%	76%	79%	58%

\* also known as Air Force, Army, Navy.

F = too few to calculate a reliable estimate

Since LASS 2016, most military characteristics have not changed (see Appendix 5). The trend for medical releases has been increasing.

Compared to males, more females are in the Air Force and fewer females have 20 or more years of service or have been deployed.

## 5. Health

Self-rated health of very good or excellent was reported by 39% of Regular Force Veterans (see Table 3). SrNCM had the lowest rate (34%), compared to JrNCM (36%) and Officers (59%). This pattern across rank groups was also observed for arthritis, diabetes, bowel disorders, hearing problems, chronic pain, activity limitations, needing help with activities of daily living, and obesity.

Self-rated mental health of very good or excellent was reported by 48% of Regular Force Veterans (see Table 3). JrNCM had the lowest rate (43%), compared to SrNCM (47%) and Officers (68%). This pattern across rank groups was also observed for depression, anxiety, PTSD, asthma, moderate or severe psychological distress, probable PTSD symptoms, and suicidal ideation<sup>11</sup>.

**Table 3. Health Indicators by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Self-Rated health</b>	Very good or excellent	59%	34%	36%	39%	39%	40%
<b>Self-Rated mental health</b>	Very good or excellent	68%	47%	43%	48%	49%	44%
<b>Chronic Conditions</b>	Arthritis	29%	47%	30%	35%	35%	38%
	Depression	15%	23%	31%	26%	24%	35%
	Anxiety	10%	21%	25%	21%	21%	25%

<b>PC-PTSD Screen</b>	Probable PTSD (3+ symptoms)	11%	22%	27%	23%	23%	20%
<b>BMI</b>	Obese	27%	37%	35%	34%	35%	27%
<b>Suicidal Ideation</b>	12-Month Ideation	4%	9%	12%	10%	10%	11%

F = too few to calculate a reliable estimate

<sup>11</sup> Thompson JM, Zamorski MA, Sweet J, et al. Roles of physical and mental health in suicidal ideation in Canadian Armed Forces Regular Force veterans. Can J Public Health 2014;105(2):e109-e115. Avail: <http://journal.cpha.ca/index.php/cjph/article/view/4217>

For the first time a question on mobility was included in LASS 2019. Most Veterans are able to walk without difficulty (87%). The rate is highest for Officers (94%) and lowest for SrNCMs (83%).

Compared to males, more females have depression and more females need help with at least one daily activity.

The prevalence of most chronic health conditions increase with age, however the mental health conditions are most prevalent in mid-life (see Appendix 3). Chronic health conditions are associated with chronic pain<sup>12</sup> and with activity limitations<sup>13</sup>.

Since LASS 2013, the trend for chronic conditions has been increasing (see Appendix 45). A number of conditions, including arthritis, high blood pressure, depression, anxiety, PTSD, and TBI effects, are significantly higher in 2019 compared to 2016. Veterans with recent releases (between 2015 and 2018) had a lower rate of excellent/very good mental health (41%), compared to earlier releases between 1998 and 2015 (50%, see Appendix 6).

For most health indicators, Veterans reported higher prevalences than Canadians of comparable age and sex (see Appendix 7). There are multiple hypotheses for the higher prevalence of mental health disorders in Veterans that span their life course before, during, and after service<sup>14</sup>. Additional health indicators can be derived from the survey data (see Table 4). These include comorbidity by count of conditions<sup>15</sup> and a composite indicator to describe a comprehensive picture of the full spectrum of mental health problems<sup>16</sup>. Different measures of hearing problems have also been measured<sup>17</sup>.

Prevalence of having a regular medical doctor was 86% (see Table 4). Differences by province were not statistically significant (see Fig 2), and the trend was for lower prevalence for the more recently released Veterans.

	Diabetes	6.3% (5.4, 7.3)	6.7% (5.6, 8.0)	7.2% (6.2, 8.5)	8.5% (7.3, 9.9)
	Cancer	1.4% (1.0, 1.9)	1.7% (1.3, 2.3)	2.6% (2.0, 3.4)	2.6% (2.0, 3.3)
	Urinary	--	3.2% (2.5, 4.2)	4.1% (3.3, 5.0)	4.5% (3.4, 5.8)
	Central Nervous System (migraine, dementia, TBI effects)	--	16.9% (15.0, 18.9)	16.6% (14.8, 18.6)	22.0% (19.7, 24.4)
	Obesity	29.8% (28.0, 31.6)	27.4% (25.2, 29.7)	28.8% (26.6, 31.1)	34.1% (31.6, 36.7)
<b>Mental Health Condition (MHC)</b>	Any MHC	25.8% (24.2, 27.3)	25.4% (23.2, 27.7)	30.3% (28.0, 32.7)	36.7% (34.1, 39.3)
	Mood disorder	--	18.1% (16.2, 20.2)	20.5% (18.5, 22.7)	25.7% (23.4, 28.1)
	Anxiety Disorder	11.2% (10.2, 12.4)	11.8% (10.2, 13.6)	14.6% (12.9, 16.4)	21.3% (19.2, 23.5)
	PTSD	12.8% (11.8, 13.9)	15.2% (13.5, 17.2)	16.4% (14.7, 18.3)	23.7% (21.5, 26.1)
<b>Comorbid Condition</b>	Both PHC* and MHC	23.4 (21.9, 24.9)	21.7% (19.7, 23.9)	24.7% (22.6, 26.9)	32.0% (29.6, 34.5)
	No PHC* or MHC	21.9 (20.1, 23.8)	27.0% (24.8, 29.4)	25.5% (23.3, 27.8)	18.2% (16.1, 20.6)
<b>Suicidal Ideation</b>	12-Month Ideation	6.2% (5.4, 7.2)	6.8% (5.6, 8.2)	8.1% (6.8, 9.5)	9.8% (8.3, 11.5)
	Lifetime Ideation	18.6% (17.2, 20.2)	20.8% (18.8, 23.0)	21.7% (19.6, 23.9)	26.2% (23.9, 28.6)
<b>Health Services</b>	Have a regular medical doctor	83.6% (81.9, 85.1)	83.1% (80.9, 85.0)	82.8% (80.8, 84.7)	86.4% (84.4, 88.2)
	Unmet health care need in past year	--	16.3% (14.5, 18.3)	10.7% (9.2, 12.3)	13.3% (11.5, 15.3)

\*PHC includes musculoskeletal, cardiovascular, gastrointestinal, respiratory conditions, diabetes, cancer, obesity.

## 6. Employment, Main Activity

The employment rate of Regular Force Veterans was 60% (see Table 5). SrNCM had the lowest rate (50%), compared to Officers (58%) and JrNCM (66%). This pattern across rank groups is similar to work as the main activity in the past year. Veterans not in the workforce report their main activity as retired (21%), on disability (12%), or training (4%). Veterans not in the workforce was associated with older age and female gender<sup>18</sup>.

Satisfaction with their main activity was reported by 72% of Regular Force Veterans (see Table 5). JrNCM had the lowest rate (65%), compared to SrNCM (75%) and Officers (84%). This pattern across rank groups was also observed for transferability of military skills to a civilian job.

**Table 5. Employment Indicators by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Labour Force Status (current)</b>	Unemployment Rate	F	F	7%	5%	5%	F
	Employment Rate	58%	50%	66%	60%	61%	49%
	Not in the workforce	40%	48%	30%	37%	36%	46%
<b>Main activity (past year)</b>	Work	56%	50%	67%	60%	61%	51%
	Retired	34%	33%	11%	21%	21%	21%
	On disability	5%	13%	13%	12%	11%	15%
	Training	F	F	5%	4%	4%	F
<b>Satisfaction with main activity</b>	Satisfied or very satisfied	84%	75%	65%	72%	71%	74%
<b>Skills transferability</b>	Agree/strongly agree	71%	64%	43%	53%	55%	38%

F = too few to calculate a reliable estimate

In LASS 2019, of those who listed working as their main activity, 79% were satisfied or very satisfied with their main activity.

Since LASS 2013, the trend for non-labour force activities has been increasing. In 2019 the percentage who were retired and the percentage who were on disability both increased compared to 2016 (see Appendix 5). Satisfaction with main activity and transferability of military skills have not changed.

Compared to Canadians of similar age and sex, Veterans report higher rates of being not in the workforce (see Appendix 7).

Female Veterans were less likely to be employed than male Veterans and were less likely to agree that their skills were transferable to a civilian job.

<sup>18</sup> MacLean MB, Keough J, Poirier A, et al. Labour-market outcomes of Veterans. VAC Research Directorate Technical Report. 15 February 2016. <http://publications.gc.ca/pub?id=9.811336&sl=0>

## 7. Finances

Some Veterans experienced low income, 6% of Regular Force Veterans reported incomes below the Low Income Measure (see Table 6). JrNCM had the highest rate (8%), compared to SrNCM (5%). The number of Officers experiencing low income was too small to report.

Satisfaction with finances was reported by 72% of Regular Force Veterans (see Table 6). JrNCM had the lowest rate (62%), compared to SrNCM (77%) and Officers (90%). This pattern across rank groups was also observed for other satisfaction measures such as satisfaction with work.<sup>19</sup>

**Table 6. Financial Indicators by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Low Income Measure</b>	Below LIM	F	5%	8%	6%	5%	F
<b>Household income</b>	\$0 to <\$50,000	F	10%	14%	11%	10%	17%
	\$50,000 to <\$100,000	20%	41%	42%	38%	39%	30%
	\$100,000 to <\$150,000	27%	27%	22%	24%	25%	24%
	\$150,000+	51%	22%	22%	27%	27%	29%
<b>Satisfaction with Finances</b>	Satisfied or very satisfied	90%	77%	62%	72%	71%	75%

F = too few to calculate a reliable estimate

The low income rate has increased in LASS 2019, compared to the other cycles of LASS (Appendix 5), but it is not a significant difference. The trend for satisfaction with finances has not changed.

Compared to Canadians of similar age and sex, Veterans report lower rates of low income (6% vs. 12%), see Appendix 7.

Income of Veterans will be described in a subsequent report, using the LASS 2019 income linkage study.

Male and female Veterans have a similar income distribution and satisfaction with finances.

<sup>19</sup> MacLean MB, VanTil L, Sweet J, et al. Factors associated with work satisfaction among veterans. J Military Veteran Family Health, 2017.

## 8. Social Indicators

An easy adjustment to civilian life was reported by 45% of Regular Force Veterans, while 39% reported difficulty (see Table 7). Officers had the lowest rate of difficult adjustment (21%), compared to SrNCM (35%) and JrNCM (47%). This pattern across rank groups is similar to a number of other social indicators, including social support<sup>20</sup>, life satisfaction, family satisfaction, sense of community belonging and alcohol use.

Mastery, a feeling that you have control over your life, was reintroduced in LASS 2019. About one quarter of Regular Force Veterans (26%) experienced high mastery. The rate was highest for Officers (41%) and much lower for SrNCM (22%) and JrNCM (23%).

**Table 7. Social Indicators by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Adjustment to Civilian Life</b>	Very or moderately easy	67%	49%	36%	45%	45%	43%
	Neither difficult nor easy	13%	16%	18%	16%	16%	18%
	Very or moderately difficult	21%	35%	47%	39%	39%	40%
<b>Satisfaction with Life</b>	Satisfied or very satisfied	93%	83%	78%	82%	82%	81%
<b>Social Support</b>	High support	91%	83%	76%	81%	80%	84%
<b>Satisfaction with Family</b>	Satisfied or very satisfied	91%	87%	75%	82%	81%	84%
<b>Sense of Community Belonging</b>	Very or somewhat strong	67%	58%	46%	53%	53%	53%
<b>Mastery</b>	High ( $\geq 23$ )	41%	22%	23%	26%	25%	31%
	Middle	58%	75%	72%	71%	71%	66%
	Low ( $\leq 7$ )	F	4%	5%	4%	4%	F
<b>Alcohol use</b>	Heavy drinker	17%	22%	27%	24%	25%	17%
<b>Life Stress</b>	Extremely or quite a bit stressful	21%	21%	31%	26%	25%	32%

F = too few to calculate a reliable estimate

In LASS 2019 the rate of difficult adjustment has significantly increased compared to other LASS cycles (see Appendix 5). The percentage reporting that they are satisfied or very satisfied with their family decreased significantly in LASS 2019. Other social indicators have not changed.

Veterans with recent releases (between 2015 and 2018) had a higher rate of difficult adjustment (47%), compared to earlier releases between 1998 and 2015, 37% (see Appendix 6). Compared to those with earlier releases, these recently-released Veterans had higher rates of anxiety (30% versus 20%) and depression (33% versus 24%). Recently-released Veterans were less likely to have a main activity of working (50%), compared to Veterans with earlier releases

<sup>20</sup> Hachey K, Sudom K, Sweet J, et al. Transitioning from military to civilian life: The role of mastery and social support. J Military Veteran Family Health, 2016; 2(1): 9–18. <http://dx.doi.org/10.3138/jmvfh.3379>

(62%). These factors are associated with difficult adjustment <sup>21, 22, 23</sup>.

Compared to Canadians of similar age and sex, Veterans report a similar rate of life stress, and lower satisfaction with life and community belonging (see Appendix 7).

Female and male Veterans are similar across social indicators.

<sup>23</sup> Thompson JM, Sweet J, VanTil L, et al. Correlates of mental health problems in CAF Veterans, LASS 2013. VAC Research Directorate Technical Report, 14 September 2016.

## 9. Health Services

Most Veterans visited a family doctor in the year prior to the survey, reported by 76% of Regular Force Veterans (see Table 8). Officers had the highest rate (83%), compared to SrNCM (81%) and JrNCM (71%).

More than half were receiving services from VAC, reported by 52% of Regular Force Veterans (see Table 8). SrNCM had the highest rate (61%), compared to JrNCM (51%) and Officers (38%). Characteristics of VAC clients were described in an earlier report<sup>24</sup>.

**Table 8. Utilization of Health Services in the Past Year by Rank Group and by Sex**

Indicator	Category	Officers (17%)	Senior NCM (30%)	Junior NCM (52%)	Regular Force (100%)	Males (87%)	Females (13%)
<b>Age</b>	Mean (years)	57	57	44	50	50	49
<b>Service Use in past year</b>	Family doctor visit	83%	81%	71%	76%	76%	80%
	Mental health visit	20%	28%	36%	31%	29%	46%
	Home care	8%	15%	12%	12%	11%	20%
	Hospitalization	6%	10%	8%	8%	8%	F
	VAC client	38%	61%	51%	52%	52%	51%

F = too few to calculate a reliable estimate

Since LASS 2010, VAC clients have increased and now stand at 52% of the LASS 2019 population. Mental health visits also increased significantly in 2019. Other service use has not changed (see Appendix 5).

Female Veterans reported higher rates of home care usage and mental health visits than male Veterans.

Compared to Canadians of similar age and sex, Veterans report higher rates of visits to family doctors and hospitals (see Appendix 7).

<sup>24</sup> Thompson JM, Poirier A, Sweet J, et al. Health and Well-being of Canadian Armed Forces Veterans, LASS 2013. VAC Research Directorate Technical Report. 3 July 2014. <http://publications.gc.ca/pub?id=9.818364&sl=0>

## 10. Family

The majority of Veterans have a current partner; 78% are married or common-law (see Appendix 4). For Veterans with a current partner, 82% of partners experienced the Veteran's release from the military. This was most common for Veterans aged 55 or older (91%), 78% for Veterans aged 35 to 54, and 65% for Veterans under the age of 35.

The majority of Veterans report high social support (81%, see Appendix 5), and 96% of Veterans agreed they had people to count on in an emergency. For these Veterans, 72% indicated their partner was the person they can count on in an emergency for support (see Table 9). Friends or neighbours provided the majority of support for 12% of Veterans.

**Table 9. Source of Social Support in an Emergency by Age Group and by Sex**

LASS 2019	Age Groups				Males	Females
	<35	35-54	55+	Total		
Spouse or partner	60%	72%	75%	72%	73%	64%
Parent or sibling	21%	11%	5%	10%	9%	15%
Friends or neighbours	15%	11%	11%	12%	11%	12%
Son or daughter	F	F	6%	4%	4%	F
Other extended family	F	F	3%	3%	3%	F
Total	100%	100%	100%	100%	100%	100%

F = too few to calculate a reliable estimate

One quarter of Veterans report they need help with daily activities of living (25%, see Appendix 5). For these Veterans, 79% indicated their partner was the person who provides the most unpaid help (see Table 10).

**Table 10. Source of Support for ADL Needs by Age Group and by Sex**

LASS 2019	Age Groups				Males	Females
	<35	35-54	55+	Total		
Spouse or partner	F	78%	84%	79%	81%	70%
Parent or sibling	F	F	F	F	F	F
Friends or neighbours	F	F	F	7%	F	F
Son or daughter	F	F	F	6%	F	F
Other extended family	F	F	F	F	F	F
Total	100%	100%	100%	100%	100%	100%

F = too few to calculate a reliable estimate

Since partners (married or common-law) are an important part of the Veteran's family, their characteristics of level of education, main activity, and activity limitations are described in Table 11.

**Table 11. Characteristics of Veteran Partners by Age Group and by Sex**

LASS 2019		Age Group of Veterans				Males	Females
		<35	35-54	55+	Total		
<b>Partner's Highest Education</b>							
	Less than high school	F	F	5%	3%	3%	F
	High school graduation	F	26%	37%	29%	28%	36%
	Post-secondary graduation	53%	42%	36%	40%	40%	41%
	University degree	32%	31%	23%	28%	28%	21%
Total		100%	100%	100%	100%	100%	100%
<b>Partner's Main Activity</b>							
	Working	68%	73%	46%	60%	60%	62%

Total		100%	100%	100%	100%	100%	100%

F = too few to calculate a reliable estimate

Nearly 4 in 10 Veterans report they had a difficult adjustment to civilian life (39%, see Appendix 5). Of the 78% of Veterans who described the effect of their release on their partner, 32% reported their partner had difficulty with their release. Of the 55% of Veterans who described the effect of their release on their children, 23% reported their children had difficulty with their release (see Table 12).

**Table 12. Difficult Adjustment to Civilian Life by Age Group and by Sex**

LASS 2019		Age Group of Veterans				Males	Females
		<35	35-54	55+	Total		
Veteran	Easy	37%	37%	56%	45%	45%	43%
	Neither	17%	17%	16%	16%	16%	18%
	Difficult	46%	46%	28%	39%	39%	40%
Partner	Easy	49%	48%	61%	54%	54%	56%
	Neither	F	15%	14%	14%	14%	14%

## Appendix 1. Definitions of LASS 2019 Indicators of Well-being

Indicator	Definition	Source
<b>Demographics</b>		
Age	Age at survey.	DND
Sex	Sex at birth - male or female.	LASS 2019
Gender	Current gender (may identify as different from sex at birth or legal documents) – male, female, other gender identity	LASS 2019
Marital Status	Are you ... married, living common-law, widowed, separated, divorced, single never married.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Education	What is the highest certificate, diploma or degree that you have <u>completed</u> ? Less than high school; High school or equivalent; Post-secondary grad (Trade certificate; College/CEGEP diploma; University certif); University degree (Bachelor or above).	LASS 2010 LASS 2013 LASS 2016 LASS 2019
<b>Military Characteristics</b>		
Rank	Rank <sup>25</sup> at release, grouped as Officer, Senior NCM, Junior NCM Excludes Entry Ranks – (Recruit, Officer Cadet, 2 <sup>nd</sup> Lieut).	DND
Service Environment	Environment at release: Air (Air Force), Land (Army), Sea (Navy).	DND
Enrolment Era	Year of CAF enrolment grouped into 4 periods.	DND
Length of Service	Years of Regular Force service calculated from the first date of enrolment to last date of release.	DND
Release Type	Voluntary (Immediate Annuity, Fixed Service, Retirement, Service Complete); Involuntary (dismissal, misconduct, illegally absent, fraudulent/irregular enrollment, unsatisfactory conduct, reduction in strength, not advantageously employed); Medical (career-limiting medical limitations 3a, 3b).	DND
Deployment	During your military service, did you ever deploy? Include international or domestic deployments, exclude training exercises.	LASS 2010 LASS 2016 LASS 2019
<b>Health</b>		
Self-rated health	In general, would you say your health is...? Excellent, Very good, Good, Fair, Poor.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Self-rated mental health	In general, would you say your mental health is...? Excellent, Very good, Good, Fair, Poor.	LASS 2010 LASS 2013 LASS 2016 LASS 2019

<sup>25</sup> [www.forces.gc.ca/en/honours-history-badges-insignia/rank.page](http://www.forces.gc.ca/en/honours-history-badges-insignia/rank.page)

Indicator	Definition	Source
Chronic Conditions (>6 month duration)	Do you currently have any of the following diagnosed by a health professional? ... <b>back problems</b> , excluding fibromyalgia and arthritis? ... <b>arthritis</b> , excluding fibromyalgia? ... <b>high blood pressure</b> ? ... mood disorder such as <b>depression</b> , mania, dysthymia or bipolar disorder? ... <b>anxiety</b> disorder such as phobia, obsessive-compulsive or panic disorder? ... <b>PTSD</b> ? ... <b>migraine</b> headaches? ... <b>diabetes</b> ? ... <b>bowel disorder</b> such as Crohn's, ulcerative colitis, Irritable Bowel, bowel incontinence? ... <b>asthma</b> ? ... <b>heart disease</b> ? ... intestinal or stomach <b>ulcers</b> ? ... <b>urinary</b> incontinence? ... effects of a traumatic brain injury ( <b>TBI</b> ) or concussion? ... <b>cancer</b> ? [ever diagnosed with cancer?] ... chronic bronchitis, emphysema or chronic obstructive pulmonary disease ( <b>COPD</b> )? ... effects of a <b>stroke</b> ? ... Alzheimer's Disease or any other <b>dementia</b> ?	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Hearing Problem	Scale of 5 questions on hearing from the Health Utilities Index Mark 3 scale (HUI3), derived by CCHS into 6 levels; this report used "not able to hear conversation in a group of three other persons without a hearing aid" (levels 2-6).	LASS 2013 LASS 2016 LASS 2019
Chronic Pain	Scale of 3 questions on chronic pain or discomfort from the Health Utilities Index Mark 3 scale (HUI3), derived by CCHS into 5 levels; this report used pain that prevents a few, some, or most activities (levels 3-5).	LASS 2013 LASS 2016 LASS 2019
Vision	Scale of 5 questions on vision from the Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
Speech	Scale of 4 questions on speech from the Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
Mobility	Scale of 7 questions on ability to walk and wheelchair use from the Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
Dexterity	Scale of 4 questions on use of hands and fingers from the Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
Happiness	Would you describe yourself as being usually? Happy and interested in life, somewhat unhappy, unhappy with little interest in life, so unhappy that life is not worthwhile from Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
Memory and Thinking	Two questions on memory and ability to think from the Health Utilities Index Mark 3 Scale (HUI3).	LASS 2019
SF-12	Quality Metric's SF-12 Health Survey is a short form scale that uses proprietary software to generate a physical component score (PCS) and mental component score (MCS).	LASS 2010 LASS 2013 LASS 2016
Activity Limitations	Scale of 5 questions to measure health-related reduction of activity in life domains of home, school/work, or other activities such as transportation or leisure. Ranked as none, sometimes, often (RACDIMP).	LASS 2010 LASS 2013 LASS 2016 LASS 2019
ADL Need	Scale of 6 questions that list basic and instrumental activities of daily living; ADL need included help with any of: personal care, indoor mobility; meals, errands, housework, or bill payment.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Psychological Distress	Kessler's scale of 10 questions on symptoms of depression and anxiety; low distress (score 0-9), mild distress (score 10-14); moderate distress (score 15-19); severe distress (score 20 to 40, likely severe mental disorder).	LASS 2013 LASS 2016 LASS 2019
PC-PTSD screen	Primary Care PTSD scale of 4 questions on the symptoms of re-experiencing trauma, numbing, avoidance, and hyper-arousal. Probable PTSD if score 3+.	LASS 2013 LASS 2016 LASS 2019

Indicator	Definition	Source
Body Mass Index (BMI)	Series of questions on self-reported weight and height are used to calculate BMI. BMI = [weight in kilograms / height in metres] SQUARED BMI categories use the international standard: Underweight (< 18.5), Normal weight (18.50 - 24.99), Overweight (25.00 - 29.99), <b>Obese</b> (30.00+).	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Suicidal ideation	Have you ever seriously considered committing suicide or taking your own life, in the past 12 months?	LASS 2010 LASS 2013 LASS 2016 LASS 2019
<b>Employment, Main Activity</b>		
Labour Force Status	Unemployment Rate: Looking for work in past 4 weeks, of those in the labour force. Employment Rate: Have a job (working or absent), of those in the population. Not in the labour force: Neither employed nor unemployed, of those in the pop'n. <i>NOTE:</i> Status at time of survey; LFS definitions of categories do not total 100%.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Main Activity	Main activity in the past 12 months: Worked at a job or ran a business; Retired and not looking for work; Attended school or training; Looked for work; Cared or nurtured a family member or partner; Was disabled or on disability.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Satisfaction with main activity	How satisfied are you with your main activity? Very satisfied, satisfied, neither satisfied nor dissatisfied, dissatisfied, very dissatisfied.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Military skills transfer	The knowledge and skills at current job are the same as used in military service. Strongly agree, Agree, Neither agree nor disagree, Disagree, Strongly disagree.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
<b>Finances</b>		
Low income	Household income below the Low Income Measure. Calculated by household size, and corresponding LIM thresholds published by Statistics Canada.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Household Income	Estimate of income (before taxes) received by all household members, from all sources, for the 2018 year.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Satisfaction with finances	How satisfied are you with your financial situation? Very satisfied, satisfied, neither satisfied nor dissatisfied, dissatisfied, very dissatisfied.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
<b>Social Indicators</b>		
Adjustment to civilian life	In general, how has the adjustment to civilian life been since you were released from the Canadian Forces? Very Difficult, Moderately Difficult, Neither Difficult nor Easy, Moderately Easy, Very Easy.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Satisfaction with life	How do you feel about your life as a whole right now? (Score 0-10). Converted to very satisfied (9-10), satisfied (6-8), neither (5), dissatisfied (2-4), very dissatisfied (0-1).	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Mastery	In this module, respondents are asked how much control they have over their life. Answer categories are used to produce measures or sense of mastery, that is, the extent to which individuals believe that their life-chances are under their control. For example "You have little control over the things that happen to you." strongly agree, agree, neither agree nor disagree, disagree, strongly disagree. Score 0-35 low to high.	LASS 2010 LASS 2013 LASS 2019

Indicator	Definition	Source
Social Support	Social Provisions Scale of 10 questions on perceived social support. High social support for SPS score 30-40 (strongly agree or agree).	LASS 2013 LASS 2016 LASS 2019
Satisfaction with family	How satisfied are you with your relationships with family members? very satisfied, satisfied, neither, dissatisfied, very dissatisfied.	LASS 2010 LASS 2016 LASS 2019
Community belonging	How would you describe your sense of belonging to your local community? very strong/ somewhat strong; somewhat weak/ very weak	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Heavy drinking	5 or more drinks per occasion, at least monthly in the past year. In 2016 & 2019, used 4 or more for women.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Life stress	Thinking about the amount of stress in your life, would you say that most days are...? Not at all, not very, a bit, quite a bit, extremely (stressful).	LASS 2010 LASS 2013 LASS 2016 LASS 2019
<b>Health Services</b>		
Family Doctor	Seen or talked to a family doctor or general practitioner, in the past year.	LASS 2010 LASS 2013 LASS 2016 LASS 2019
Mental Health	Seen or talked to a health professional about your emotional or mental health, in the past year.	LASS 2016 LASS 2019
Home Care	Received any home care services, in the past 12 months.	LASS 2013 LASS 2016 LASS 2019
Hospitalization	Overnight patient in a hospital, in past 12 months.	LASS 2013 LASS 2016 LASS 2019
VAC Client	Veteran received any benefit from VAC as of 31 March 2019; includes all disability benefit clients (DA and/or DP).	VAC
