INTRODUCTION

This list of the names of the settlements and natural features of the island of Newfoundland was prepared in the Geographical Branch for use in government agencies, and is designed as a guide to the location of places on the island. It was compiled from a map entitled "10-mile Map of Newfoundland", published by the Department of Natural Resources, Newfoundland in 1941. The spelling of all names used in the list is taken directly from this map.

Names in capital letters (e.g. NORTHERN ARM) indicate settlements.

Names in capitals and lower case letters (e.g. Northern Arm) indicate natural features.

Place names with identical spelling are listed in order of ascending latitude.

Place names with identical spelling and having the same latitude are listed in order of increasing longitude.

The positions of hydrographic features are plotted in the following manner:-

Rivers - the location of the mouth.

Tributary streams - the point of junction with the main stream.

Expanses of water (bays, bights, coves, harbours, inlets, ponds, straits) - the location of their central points.

The position of islands and peninsulas are located by **their** central points.
