Under the authority of the [Pest Control Products Act](#), Health Canada's Pest Management Regulatory Agency (PMRA) has received applications to register technical grade broflanilide and the end-use products Cimegra, Teraxxa and Teraxxa F4 for use in Canada on potato, corn (all types) and small grains.

The evaluation of these broflanilide applications indicated that the end-use products have value, and the human health and environmental risks associated with their proposed uses are acceptable. Details regarding these applications can be found in [Proposed Registration Decision PRD2020-06, Broflanilide](#), posted to the Canada.ca website on 11 June 2020.

Before registering a pesticide for food use in Canada, the PMRA must determine the quantity of residues that are likely to remain in or on the food when the pesticide is used according to label directions and that such residues will not be a concern to human health. This quantity is then legally specified as a maximum residue limit (MRL). An MRL applies to the identified raw agricultural food commodity as well as to any processed food product that contains it, except where separate MRLs are specified for the raw agricultural commodity and a processed product made from it.

In addition, the PMRA is proposing to specify MRLs for broflanilide on amaranth grain, annual canarygrass seeds, cañihua seeds, chia seeds, cram-cram seeds, huauzontle grain, quinoa, teff grain, wheat spelt grain, and all other food commodities (other than those listed in this PMRL) to permit the import and sale of food containing such residues. The PMRA has determined the quantity of residues that are likely to remain in or on the imported commodities when broflanilide is used according to label directions in the exporting country, and that such residues will not be a concern to human health. Details regarding the proposed MRLs on imported commodities can also be found in PRD2020-06.

Consultation on the proposed MRLs for broflanilide is being conducted via PRD2020-06. Information regarding the proposed MRLs can be found in Sections 3.5 and 7.1. Supporting field trial residue data are also provided in the PRD. The PMRA invites the public to submit written comments on the proposed MRLs for broflanilide in accordance with the guidance found in PRD2020-06.

To comply with Canada's international trade obligations, consultation on the proposed MRLs is also being conducted internationally by notifying the [World Trade Organization](#), as coordinated by [Canada's Notification Authority and Enquiry Point](#).

The proposed MRLs for broflanilide are as follows.

**Table 1 Proposed Maximum Residue Limits for Broflanilide**

Common Name	Residue Definition	MRL (ppm) <sup>1</sup>	Food Commodity
Broflanilide	3-(benzoylmethylamino)- <i>N</i> -[2-bromo-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]-6-(trifluoromethyl)phenyl]-2-fluorobenzamide	0.04	Tuberous and corm vegetables (crop subgroup 1C)
		0.01	Cereal grains (crop group 15, except rice and wild rice), amaranth grain, annual canarygrass seeds, cañihua seeds, chia seeds, cram-cram seeds, huauzontle grain, quinoa, teff grain, wheat spelt grain
		0.01	Food commodities (other than those listed in this item)
	3-(benzoylmethylamino)- <i>N</i> -[2-bromo-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]-6-(trifluoromethyl)phenyl]-2-fluorobenzamide and the metabolite 3-(benzoylamino)- <i>N</i> -[2-bromo-4-(1,1,1,2,3,3,3-heptafluoropropan-2-yl)-6-(trifluoromethyl)phenyl]-2-fluorobenzamide, expressed at parent equivalents	0.02	Eggs; fat, meat, and meat byproducts of cattle, goats, hogs, horses, poultry and sheep; milk

<sup>1</sup> ppm = parts per million

MRLs are proposed for each commodity included in the listed crop groupings in accordance with the [Residue Chemistry Crop Groups](#) webpage in the Pesticides section of the Canada.ca website.

MRLs established in Canada may be found using the [Maximum Residue Limit Database](#) on the [Maximum Residue Limits for Pesticides](#) webpage. The database allows users to search for established MRLs, regulated under the *Pest Control Products Act*, both for pesticides or for food commodities.

### International Situation and Trade Implications

Broflanilide is a new active ingredient that is concurrently being registered in Canada and the United States. The MRLs proposed for broflanilide in Canada are the same as corresponding tolerances to be promulgated in the United States.

Once established, the American tolerances for broflanilide will be listed in the [Electronic Code of Federal Regulations](#), 40 CFR Part 180, by pesticide.

Currently, there are no Codex MRLs<sup>1</sup> listed for broflanilide in or on any commodity on the Codex Alimentarius [Pesticide Index](#) webpage.

### **Next Steps**

The PMRA invites the public to submit written comments on the proposed MRLs for broflanilide up to 75 days from the date of publication of this document. Please forward your comments to Publications (see the contact information on the cover page of this document). The PMRA will consider all comments received before making a final decision on the proposed MRLs. Comments received will be addressed in a separate document linked to this PMRL. The established MRLs will be legally in effect as of the date that they are entered into the [Maximum Residue Limit Database](#).

---

<sup>1</sup> The Codex Alimentarius Commission is an international organization under the auspices of the United Nations that develops international food standards, including MRLs.
