FOREWORD

This bibliography lists titles of studies carried out on the soils of Canada by Canadian and other scientists and on the soils of countries other than Canada by Canadians, published in journals, books, bulletins, and theses. Because of the close relationship between soil fertility and plant nutrition, an appreciable number of titles concern plant nutrition. Entries, arranged chronologically by year and alphabetically by senior author within the year, include papers published through 1969.

The decision to include or omit a few titles of doubtful merit or usefulness was my own. In addition to titles that I purposely omitted, there may be others that I failed to locate in the literature. I should be pleased to know of omissions or errors. This bibliography is intended to be updated every 2 or 3 years.

I extend my sincere thanks to all those who helped in compiling the entries and preparing the book for publication.
