# IMPLEMENTATION OF THE WORLD HEALTH ORGANIZATION’S BEHAVIOURAL INSIGHTS COVID-19 SURVEY TOOL IN THE CANADIAN CONTEXT: RAPID AND COST-EFFECTIVE MONITORING OF PUBLIC PERCEPTIONS, KNOWLEDGE AND BEHAVIOURS 

Executive Summary<br>Prepared for Privy Council Office of Canada<br>Supplier Name: Leger<br>October 2020

This public opinion research methodological report presents the technical aspects of a web survey conducted by Leger Marketing Inc. on behalf of the Privy Council Office of Canada. The research was conducted with Canadians 18 and over who could understand and express themselves in either French or English.

Cette publication est aussi disponible en français sous le titre :
Mise en œuvre de l'outil de sondage de l'Organisation mondiale de la santé sur les comportements liés à la COVID-19 dans le contexte canadien : une surveillance rapide et économique des perceptions, des connaissances et des comportements du public.

## 1. Executive Summary

Leger is pleased to present The Privy Council Office of Canada, as well as the Government of Canada, with this technical report describing the methodology used for the longitudinal study on public perceptions, knowledge and behaviours during the COVID-19 pandemic.

This report was prepared by Leger who was contracted by The Privy Council Office (contract number 35035-192504/001/CY awarded April 1 ${ }^{\text {st }}, 2020$. This contract has a value of $\$ 248,342.93$ including HST).

### 1.1 Background and Objectives

In the context of the COVID-19 pandemic, the Privy Council Office (PCO), the secretariat responsible for providing nonpartisan advice to the Prime Minister and coordinating the work of federal government departments and agencies, needed ongoing access to quantitative data describing the evolution of Canadians' perceptions, attitudes, knowledge, and behaviours in this uncertain context. The Behavioural Insight Tool (BI), developed by the World Health Organization (WHO), was used as the data collection tool for this study. At each survey wave, the collection tool was adjusted to reflect the evolution of the pandemic and the primary data needs of PCO.

The main objectives of this study were to provide PCO and other government departments (e.g., Health Canada \& Public Health Agency of Canada) with research-based information on Canadians' perceptions, knowledge and behaviours relating to COVID-19. This includes:

- trust in health authorities, recommendations, and information;
- risk perceptions;
- acceptance of recommended behaviours;
- knowledge;
- barriers/drivers to recommended behaviours;
- misperceptions;
- and stigma.

The results of this public opinion study has been and will be put to various uses by PCO and other federal departments and agencies:

- Track Canadians' evolving perceptions, knowledge and behaviours relating to COVID19 , to better understand how public awareness campaigns and broader government
response efforts have been affecting the population more holistically and to inform whole-of-government decision-making moving forward;
- Compare data trends cross-nationally (i.e., with other allied countries that adopt the WHO BI protocol) in a standardized manner, facilitating a better understanding how the Canadian populace fares relative to other nations on an ongoing basis in their perceptions, attitudes, and knowledge; and
- Enable the Government of Canada to further develop and refine COVID-19 response efforts to meet the specific needs of Canadians. This study was seen as an element of broader public engagement efforts in response to COVID-19 that intend to proactively and iteratively educate and encourage Canadians to play their part in sustained response efforts.

### 1.2 Notes on The Interpretation of The Findings

Since a sample drawn from an Internet panel is not probabilistic in nature, the margin of error cannot be calculated for this survey. Respondents for this survey were selected from among those who have volunteered to participate/registered to participate in online surveys. The results of such surveys cannot be described as statistically projectable to the target population. The data have been weighted to reflect the demographic composition of the target population. Because the sample is based on those who initially self-selected for participation, no estimates of sampling error can be calculated.

### 1.3 Declaration of Political Neutrality and Contact Information

I hereby certify, as chief agent of Leger, that the deliverables are in full compliance with the neutrality requirements of the Policy on Communications and Federal Identity and the Directive on the Management of Communications-Appendix C (Appendix C: Mandatory Procedures for Public Opinion Research).

Specifically, the deliverables do not include information on electoral voting intentions, political party preferences, party positions, or the assessment of the performance of a political party or its leaders.

Signed by:

### 1.4 Methodology

This study was conducted through a web-based survey of the Canadian population aged 18 and over who can speak English or French. The respondents were randomly selected through the Leo panel, our panel of Canadian Internet users comprising nearly half a million Internet users.

Eight waves of studies were completed for this research project. A sample of 2,000 respondents was collected each wave. Since this was a longitudinal study, the objective was to re-invite the 2,000 respondents from wave 1 in subsequent survey waves. Our goal was to maximize the number of respondents who respond to the maximum number of survey waves. Respondents who cease to participate in subsequent waves were replaced following the gender, age and regional quotas that was be implemented in the project.

All respondents were contacted via email by Leger. All invitations were bilingual to ensure that no respondent gets a unilingual invitation in the wrong official language. Each respondent was provided with an invitation that includes preapproved information from PCO regarding the nature of the research (i.e. Government of Canada) including the required information for consent and the rights and obligations of respondents.

Fieldwork for this survey took place from April 10, 2020 to September 16, 2020. Details of the eight waves are provided in the following sections.

### 1.5 Quotas

A series of quotas were implemented for this project. Quotas were cross-referenced by gender and age groups and were also imposed on the region of residence of respondents. The first quota is $50 \%$ men and $50 \%$ women for the gender sample. These gender quotas were also respected within the following age groups: 18-34, 35-54 and 55 and over. Those gender and age quotas had to be respected at the regional level. The Canadian regions were split as follows:

- Atlantic Canada (Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick);
- Quebec;
- Ontario;
- Manitoba/Saskatchewan/Nunavut;
- Alberta/Northwest Territories;
- British Columbia/Yukon.

The following table details the expected distribution of the sample across the provinces and territories for each wave.

The sample distribution was planned as follows:

| Provinces and Territories | NL | NS | PE | NB | QC | ON | MB | SK | AB | BC | NU | NT | YT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \# of Respondents | 40 | 80 | 22 | 60 | 400 | 620 | 126 | 106 | 260 | 280 | 2 | 2 | 2 |

As there were no respondents from Nunavut, the two planned respondents were replaced by respondents from Manitoba and Saskatchewan. As for any general population sample derived from a national survey, the final results were weighted by region, age groups, gender, education and the presence of children in the household to make the final samples representative of the actual population of Canada. Details on the weighting factors are presented in a subsequent section of this report.

## 2. Details for Each Wave

### 2.1 Pretest

To validate the programming of the questionnaire, a pre-test was conducted in both languages before each wave of the project. The following table shows the details of those pre-tests. A validation of frequencies and databases was done after each pre-test to ensure that the programming was accurate and functional.

Table 1. Pretest details for waves 1 through 8

|  | Wave 1 |  |
| :--- | :---: | :---: |
| Date of the pre-test |  | April 10 ${ }^{\text {th, } 2020 ~}$ |

| Number of completed questionnaires | 46 |
| :---: | :---: |
| Average length during pre-test | 17.34 min . |
|  | Wave 2 |
| Date of the pre-test | April $21{ }^{\text {st }}, 2020$ |
| Number of completed questionnaires | 31 |
| Average length during pre-test | 12.25 min . |
|  | Wave 3 |
| Date of the pre-test | May $5^{\text {th }}, 2020$ |
| Number of completed questionnaires | 24 |
| Average length during pre-test | 17.47 min . |
|  | Wave 4 |
| Date of the pre-test | May 27 ${ }^{\text {th }}, 2020$ |
| Number of completed questionnaires | 34 |
| Average length during pre-test | 15.04 min |
|  | Wave 5 |
| Date of the pre-test | June $23^{\text {rd }}$, 2020 |
| Number of completed questionnaires | 30 |
| Average length during pre-test | 18.32 min |
|  | Wave 6 |
| Date of the pre-test | July $17^{\text {th }}, 2020$ |
| Number of completed questionnaires | 55 |
| Average length during pre-test | 18.02 |
|  | Wave 7 |
| Date of the pre-test | August 13 ${ }^{\text {th, }} 2020$ |
| Number of completed questionnaires | 36 |
| Average length during pre-test | 16.17 min . |
|  | Wave 8 |
| Date of the pre-test | September $10^{\text {th, }} 2020$ |
| Number of completed questionnaires | 53 |

| Average length during pre-test | 20.42 min |
| :--- | :--- |

### 2.2 Data collection

Data collection for this project began in April 2020 and was carried out over several waves until September 2020. Each wave lasted between four and six days in field. A minimum target of 2,000 respondents for each wave was established. Following the first wave, Léger conducted recontacts to maximize the number of respondents who participated in previous waves and replaced respondents who ceased to participate in subsequent waves following the gender, age and regional quotas. The first days of data collection were aimed at recontacting previous respondents, while the last days of data collection were aimed at replacing the non-returning respondents, due to attrition. The following table details the collection dates and the number of respondents and recontacts for each wave.

Table 2. Data collection details for waves 1 through 8

| Wave 1 |  |
| :---: | :---: |
| Start of data collection | April 10 ${ }^{\text {th }}, 2020$ |
| End of data collection | April 14 ${ }^{\text {th }}, 2020$ |
| Invitations sent | 19,123 |
| Number of completed interviews | 2,023 |
| Survey Length (Average) | 26 minutes |
| Survey Length (Median) | 22 minutes |
| Wave 2 |  |
| Start of data collection | April 21 ${ }^{\text {st, }}, 2020$ |
| End of data collection | April 25 ${ }^{\text {th }}, 2020$ |
| Invitations sent | 16,514 |
| Recontact | 1,703 |
| New respondents | 14,811 |
| Number of completed interviews | 2,098 |
| Recontact | 1,489 |
| New respondents | 609 |

| Survey Length (Average) | 23 minutes |
| :---: | :---: |
| Survey Length (Median) | 20 minutes |
| Wave 3 |  |
| Start of data collection | May 5 ${ }^{\text {th }}, 2020$ |
| End of data collection | May $10^{\text {th }}, 2020$ |
| Invitations sent | 8,012 |
| Recontact | 2,002 |
| New respondents | 6,010 |
| Number of completed interviews | 2,000 |
| Recontact | 1,733 |
| New respondents | 267 |
| Survey Length (Average) | 23 minutes |
| Survey Length (Median) | 20 minutes |
| Wave 4 |  |
| Start of data collection | May 27 ${ }^{\text {th }}, 2020$ |
| End of data collection | June ${ }^{\text {st, }}$,2020 |
| Invitations sent | 12,380 |
| Recontact | 1,987 |
| New respondents | 10,393 |
| Number of completed interviews | 2,152 |
| Recontact | 1,702 |
| New respondents | 450 |
| Survey Length (Average) | 25 minutes |
| Survey Length (Median) | 21 minutes |
| Wave 5 |  |
| Start of data collection | June 23 ${ }^{\text {rd }}$, 2020 |
| End of data collection | June $28{ }^{\text {th, }} 2020$ |
| Invitations sent | 15,880 |
| Recontact | 2,128 |
| New respondents | 13,752 |
| Number of completed interviews | 2,169 |
| Recontact | 1,847 |
| New respondents | 322 |

| Survey Length (Average) | 23 minutes |
| :---: | :---: |
| Survey Length (Median) | 20 minutes |

| Start of data collection | July $17^{\text {th }}, 2020$ |
| End of data collection | July 22 ${ }^{\text {nd }}, 2020$ |
| Invitations sent | 7,408 |
| Recontact | 2,169 |
| New respondents | 5,239 |
| Number of completed interviews | 2,141 |
| Recontact | 1,885 |
| New respondents | 256 |
| Survey Length (Average) | 23 minutes |
| Survey Length (Median) | 20 minutes |
| Wave 7 |  |
| Start of data collection | August 13 ${ }^{\text {th, }} 2020$ |
| End of data collection | August 17 ${ }^{\text {th }}, 2020$ |
| Invitations sent | 9,857 |
| Recontact | 2,141 |
| New respondents | 7,716 |
| Number of completed interviews | 2,129 |
| Recontact | 1,776 |
| New respondents | 353 |
| Survey Length (Average) | 24 minutes |
| Survey Length (Median) | 21 minutes |
| Wave 8 |  |
| Start of data collection | September $10{ }^{\text {th }}$,2020 |
| End of data collection | September $16^{\text {th }}$, 2020 |
| Invitations sent | 9,442 |
| Recontact | 2,129 |
| New respondents | 7,313 |
| Number of completed interviews | 2,117 |
| Recontact | 1,822 |
| New respondents | 295 |

| Survey Length (Average) | 29 minutes |
| :--- | :--- |
| Survey Length (Median) | 24 minutes |

### 2.3. Participation rate

Below is the calculation of the participation rate to the web survey for all eight waves. The participation rate is calculated using the following formula: Participation rate / response rate $=\mathrm{R} \div(\mathrm{U}+\mathrm{IS}+\mathrm{R})$. The table below provides details of the calculation. For all waves, the participation rate ranges between $11,4 \%$ and $30 \%$.

Table 3. Participation rate for wave 1

| Base Sample | 19,123 |
| :---: | :---: |
| Invalid cases | 0 |
| Invitations mistakenly sent to people who did not qualify for the study | 0 |
| Incomplete or missing email addresses | 0 |
| Unresolved (U) | 16,255 |
| Email invitations bounce back | 0 |
| Email invitations unanswered | 16,255 |
| EFFECTIVE SAMPLE* | 2,319 |
| In-scope non-responding units (IS) | 211 |
| Non-response from eligible respondents | 0 |
| Respondent refusals | 0 |
| Language problem | 0 |
