LET GOOD CYBER SECURITY RUN IN THE FAMILY

More of your family's life is taking place online every day. Whether kids are attending online classes, guardians are working from home or you're simply staying connected through social media, take these steps to protect yourself online so you can enjoy your digital life while keeping safe.

STRENGTHEN YOUR PASSWORDS

Secure your family's accounts and devices with strong passwords or passphrases

Make sure passwords are unique to each account

Have a talk with family members about not sharing passwords with others

SECURE YOUR NETWORK

Change your router's username and password from the default settings

Create a guest network for smart devices and visitors

If possible, move your router to a central spot in your home, away from windows

GET SCHOOLED ABOUT PHISHING

Learn the signs of a phishing message

Talk with family members about the dangers of opening links and attachments

Review phishing messages together to learn how to spot the signs of a scam

DO SOME HOUSEKEEPING

Regularly back up the data on your devices

Uninstall apps and software you no longer use

Unpair Bluetooth devices you no longer own or use

STAY UPDATED

- Update the operating systems on all devices in your home, including smart devices
- Update software and apps on your computers, tablets and phones
 - Enable automatic updates where available

Help your kids learn more about cyber security by looking at Get Cyber Safe's kid-friendly resources with them.
