BIBLIOGRAPHIE SIGNALÉTIQUE
PRÉCIPITATIONS ACIDES

COMPILÉE PAR LUCIE BRUNELLE

JUILLET 1982

Canada

AVANT-PROPOS

Cette bibliographie a été préparée afin de répondre à deux objectifs: premièrement mettre à la disposition du public et de la communauté scientifique autant d'information que possible sur le problème des précipitations acides et deuxièmement, faciliter l'accès à un nombre toujours croissant de documents.

L'ancienne classification a été modifiée de façon à faciliter la recherche par sujet. Ainsi, les références bibliographiques sont classées selon sept (7) catégories subdivisées en plusieurs sous-catégories et les documents traitant de plusieurs aspects sont cités à l'intérieur de chacune des catégories concernées.

Comme elle a d'abord été conçue pour satisfaire les besoins des scientifiques de la Direction générale des eaux intérieures, la présente publication n'a pas la prétention d'être exhaustive. Nous tentons cependant de repérer et d'intégrer à notre documentation autant de références que possible et nous nous proposons de publier régulièrement une version révisée de la bibliographie.

Dans le but de garantir la disponibilité des documents, seule la consultation sur place est autorisée. Nous tenons enfin à remercier toutes les personnes de la Direction générale des eaux intérieures qui ont collaboré à la réalisation de ce document.

Pour plus de renseignements,
s'adresser à:

Lucie Brunelle

FOREWORD

This bibliography has been prepared to serve two purposes: firstly, to make as much information as possible on the subject of acid precipitation available to the general public and the scientific community; secondly, to provide easier accessibility to an ever-increasing number of documents.

Previous classification has been modified in order to simplify research related to more specific subject matter. Therefore, references have been divided into seven (7) sections which in turn are subdivided into various subsections. Documents concerned with multiple aspects will be referred into each of the relevant categories.

Especially designed to fulfil our requirements, this bibliography is by no means exhaustive. However we have attempted to integrate into our publication bank as many documents as possible and intend to publish a revised, updated version of this document on a regular basis.

To insure constant availability, all documents are only available for consultation on the premises. Finally, we would like to acknowledge the collaboration of the Inland Waters Directorate personnel who contributed to making this publication possible.
