Collaborating laboratories

Laboratory component leads

National Microbiology Laboratory @ Winnipeg

- Reference Services Unit: Sara Christianson
- Antimicrobial Susceptibility Testing: Amrita Bharat and Stacie Langner

National Microbiology Laboratory @ Guelph

- Guelph Reference Services Unit (Salmonella Typing): Matt Cook, Nina Dougherty, Bob Holtslander, Suzanne Johnson, Ketna Mistry, Betty Wilkie, Pauline Zhang, and Kim Ziebell
- Antimicrobial Susceptibility Testing: Andrea Desruisseau and Chad Gill

National Microbiology Laboratory @ Saint-Hyacinthe

- Antimicrobial Susceptibility Testing: Danielle Daignault, Manon Caron, and Sophia Sheriff
- Primary Isolation: Louise Beausoleil, Sindy Cleary, Marie-Claude Deshaies, Julie Roy, and Lien Mi Tien

Provincial public health laboratories

We gratefully acknowledge the provincial public health laboratories for their longstanding support and for providing data and bacterial isolates for CIPARS:

- British Columbia Public Health Microbiology and Reference Laboratory, Provincial Health Services Authority, British Columbia (Linda Hoang)
- Provincial Laboratory for Public Health, Alberta (Marie Louie)
- Saskatchewan Laboratory and Disease Control Services (Greg Horsman)
- Cadham Provincial Laboratory, Manitoba (John Wylie)
- Public Health Ontario Laboratory, Public Health Ontario (Vanessa Allen)
- Laboratoire de santé publique du Québec de l'Institut national de santé publique du Québec (Sadja Bekal)
- New Brunswick Enteric Reference Centre (Sameh El Bailey)
- Microbiology Laboratory, Queen Elizabeth II Health Sciences Centre, Nova Scotia (David Haldane)
- Laboratory Services, Queen Elizabeth Hospital, Prince Edward Island (Greg German)
- Newfoundland Public Health Laboratory (George Zahariadis)

Provincial animal health laboratories

We gratefully acknowledge the provincial animal health laboratories for their longstanding support and for providing data and bacterial isolates for CIPARS:

- Animal Health Centre, British Columbia Ministry of Agriculture (Erin Zabek)
- Prairie Diagnostic Services, Saskatoon (Kathy Dielschneider and Musangu Ngeleka)
- Veterinary Services Branch Laboratory, Manitoba (Neil Pople)
- The Animal Health Laboratory, University of Guelph, Ontario (Durda Slavic)
- IDEXX Laboratories, Ontario (Hani Dick)
- Laboratoire d'épidémiologie animale du Québec (Julie-Hélène Fairbrother)
- Provincial Veterinary Laboratory, Department of Agriculture, Fisheries, and Aquaculture, New Brunswick (Jim Goltz)
- Veterinary Pathology Laboratory, Nova Scotia (Catherine Graham)
- Diagnostic Services, Atlantic Veterinary College, Prince Edward Island (Jan Giles)
- Animal Health Laboratory, Department of Fisheries, Forestry and Agrifoods, Newfoundland and Labrador (Laura Rogers)
- Department of Fisheries and Agriculture (Jeannie Tucker)

Surveillance components

Retail meat surveillance

We would like to extend our thanks to the following organizations for their participation in CIPARS Retail Meat Surveillance:

- Centre for Coastal Health (Carl Ribble and Stefan Iwasawa)
- Agriculture and Agri-Food Canada (Mueen Aslam, Tineke Jones, Cara Service, and Tim McAllister)

We also thank the following health unit managers, public health inspectors, and environmental health officers: Bob Bell, Tanya Musgrave, Torsten Schulz, and Lee Siewerda.

Abattoir surveillance

We would like to thank the abattoir operators and the Canadian Food Inspection Agency's regional directors, inspection managers, and on-site staff, for their extensive voluntary participation in CIPARS Abattoir Surveillance.

Farm surveillance

We are grateful for the support of the Canadian Poultry Research Council, the Ontario Ministry of Agriculture, Food and Rural Affairs, and the Saskatchewan Ministry of Agriculture, as well as the sentinel veterinarians and the producers who participated in Farm Surveillance by providing data and enabling collection of samples for bacterial culture.

We would like to acknowledge the following organizations for their contribution to the CIPARS Farm Surveillance components:

- Alberta Chicken Producers
- Alberta CAP (Canadian Agricultural Partnership) Funding
- Alberta Beef Producers
- Alberta Cattle Feeders Association
- Bayer Animal Health
- Beef Cattle Research Council/Canadian Cattleman's
- Beef Farmers of Ontario
- British Columbia Chicken Marketing Board
- British Columbia Turkey Farmers
- Canadian Hatcheries Federation
- Canadian Pork Council and Provincial Pork Boards
- Canadian Poultry and Egg Processors Council
- Chicken Farmers of Canada
- Chicken Farmers of Ontario
- CIPARS Farm Broiler Chicken Industry Antimicrobial Use/Resistance Working Group
- CIPARS Farm Feedlot Cattle Expert Group and Advisory Committee
- CIPARS Farm Swine Advisory Committees
- Les Éleveurs de volailles du Québec
- McDonald's
- Ontario CAP Funding
- Prairie Diagnostic Services, Saskatoon
- Saskatchewan Cattle Feeders Association
- Turkey Farmers of Ontario
- Turkey Farmers of Canada
- Vetoquinol

Quantities of antimicrobials distributed for sale in animals

Surveillance component coordinators

- Health Canada's Veterinary Drugs Directorate: Manisha Mehrotra
- Public Health Agency of Canada – Centre for Foodborne, Environmental and Zoonotic Infectious Diseases: Carolee Carson
- Public Health Agency of Canada – Canadian Network for Public Health Intelligence (CNPHI): Shamir Mukhi

Health Canada data validation and communication

- Xian-Zhi Li, Annika Flint, Megan Rose-Martel, Valentine Usongo, Mark Reist, Holly Hutchings, Naida Hyndman, and Tushar Shakya

Veterinary Antimicrobial Sales Reporting (VASR) database operations in Canadian Network for Public Health Intelligence (CNPHI)

- The CNPHI team

Integrated AMU information

- Data on antimicrobials used as pesticides on food crops: Brian Belliveau
- Data on antimicrobials dispensed by community pharmacies or purchased by hospitals for use in people: Glenys Smith and Jayson Shurgold
- Data on CIPARS farm-use: Agnes Agunos, David Léger, Sheryl Gow, and Anne Deckert
- Data on aquaculture: John Martell and Ed Porter

Additional thanks for Veterinary Antimicrobial Sales Reporting (VASR)

A very sincere appreciation to input and help along the way from David Léger and Brent Avery for the development of VASR. We appreciate the advice and support of Mary-Jane Ireland, Steven Sternthal, and Stephen Parker. We would also like to thank the data providers, for both their data and for their feedback about improving the VASR system.

Other participants

We gratefully acknowledge the efforts of field workers, laboratory technicians, and data managers for their contributions. The careful collection of samples, processing of isolates, and recording of results are essential to the ongoing success of CIPARS.

We are grateful to the National Antimicrobial Resistance Monitoring System of the United States for sharing information and facilitating harmonization with CIPARS.

We would also like to thank the following individuals and organizations for their contribution to CIPARS in 2019:

Public Health Agency of Canada

Ashleigh Andrysiak, Louise Bellai, Mark Blenkinsop, Ann-Marie Cochrane, George Golding, Saarah Hussain, Dolly Kambo, Nicol Janecko, Stefanie Kadykalo, Ora Kendall, Lisa Landry, Julie Légaré, Sarah Martz, Ryan McKarron, Ali Moterassed, Manuel Navas, Linda Nedd-Gbedemah, Derek Ozunk, Allison Roberts, Mythri Viswanathan, Rama Viswanathan, Victoria Weaver, and Irene Yong.

We are grateful for the support for antimicrobial use metrics development: Angelina Bosman, Daleen Loest, and Lucie Collineau.

Canadian Food Inspection Agency

Daniel Leclair, Debbie Roffe, and Marina Steele

Canadian Meat Council

Independent Contractors

John Ranson and Ron Templeman

Stephanie Brault

Grace Kuiper

Dana Ramsay

What's new for CIPARS in 2019

Antimicrobial use

- In 2019, sales data collected from Veterinary Antimicrobial Sales Report (VASR), a collaborative initiative between Public Health Agency of Canada and Health Canada, were included in this report. Regulatory changes to the Food and Drug Regulations for annual sales reporting came into force in 2017 to increase oversight of antimicrobials available for use in animals, to support antimicrobial resistance (AMR) surveillance and antimicrobial stewardship. These changes require manufacturers, importers, and compounders to report annual sales of medically important antimicrobials intended for use in animals (those important to human medicine). To implement the regulatory reporting requirements, Health Canada and the Public Health Agency of Canada developed the Veterinary Antimicrobial Sales Reporting (VASR) system. The VASR system collects data on volumes of antimicrobials and total quantity sold or compounded by animal species, and by province/territory. The reporting year reflects data collected for the period of January 1 to December 31. Additionally, CIPARS is working on revising the population denominators used to contextualize the sales data.
- In 2019, the methodology for estimating the quantity of antimicrobials administered via water for farm animals was revised (not based on water consumed and inclusion rate per liter) and followed the OIE protocol. The total milligrams of active ingredient was estimated based on the number of packages multiplied by the pack content and the strength (e.g., grams of antimicrobial per unit or percentage of active ingredient) of the product.
- The first year of antimicrobial use data for Canadian feedlot beef cattle was collected in 2019. Data to be released in future reports.

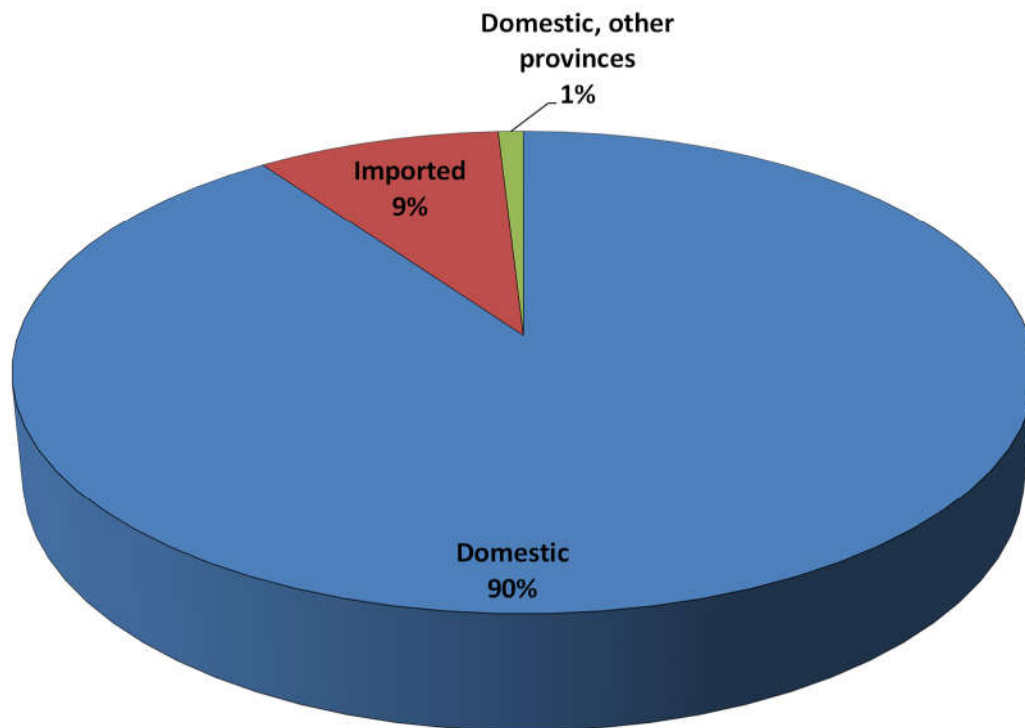

Antimicrobial resistance

- In 2019, thanks to external funding, sampling was conducted in the 3 major feedlot cattle producing provinces of Alberta, Saskatchewan, and Ontario.
- In 2019, telithromycin resistance was no longer reported in *Campylobacter* temporal figures and multiclass resistance tables.
- Only a partial year of retail sampling was conducted in Ontario and the Prairies, and no sampling occurred in the Atlantic region; therefore no temporal retail meat data from these regions are presented in 2019.

Chapter 1 Animal health status and farm information

Broiler chickens

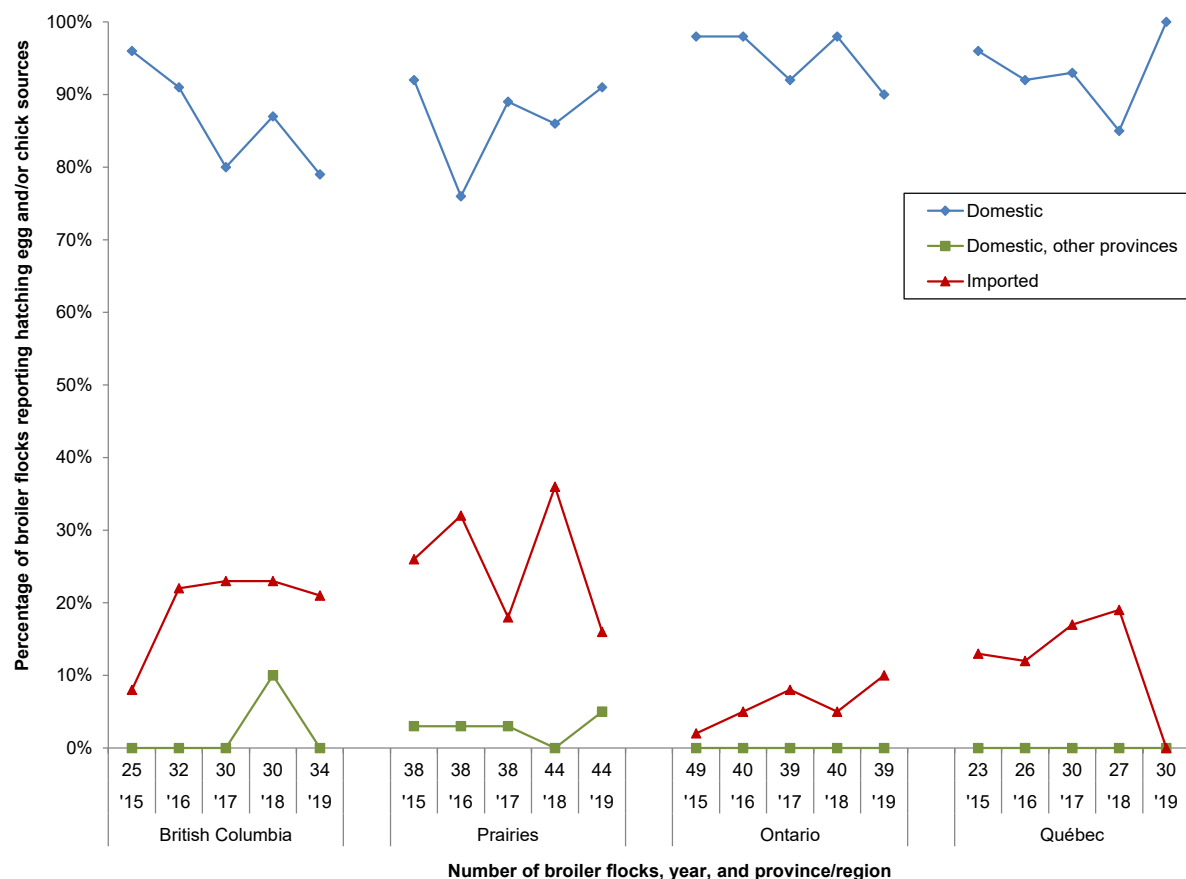

Figure 1. 1 Relative distribution of chick sources, 2019

Domestic = hatched within the province where the birds were raised.

Domestic, other provinces = hatched in a different province from where the birds were raised.

Imported = hatching eggs and/or chicks were sourced by the importing hatchery from the United States or other countries.

Figure 1. 2 Sources of hatching eggs and/or chicks placed in the barn sampled, by province/region, 2015 to 2019

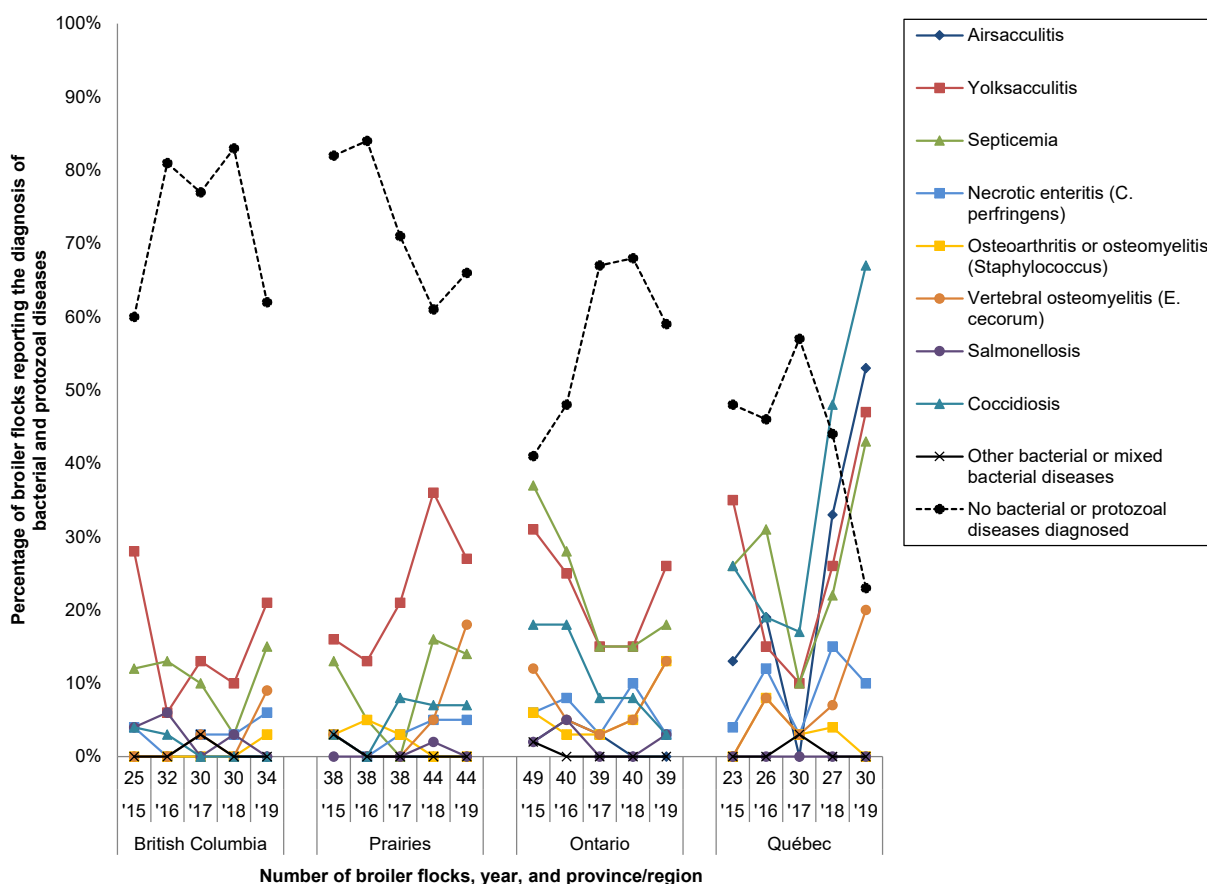

Province/region	British Columbia					Prairies					Ontario					Québec				
Year	'15	'16	'17	'18	'19	'15	'16	'17	'18	'19	'15	'16	'17	'18	'19	'15	'16	'17	'18	'19

Health status was considered to be positive if the questionnaire response was "Confirmed positive" or "Likely positive". Health status was considered to be negative if the questionnaire response for any of the viral diseases was "Confirmed negative" or "Likely negative". No diseases diagnosed pertains to flocks reporting "Likely Negative" in all the viral diseases listed on the questionnaire.

In 2019, ascites was reported (metabolic noninfectious disease).

The Prairies is a region including the provinces of Alberta and Saskatchewan.

Grower-finisher pigs

Figure 1. 5 Number of infectious diseases reported by grower-finisher pig herds (n = 107), by province/region, 2019

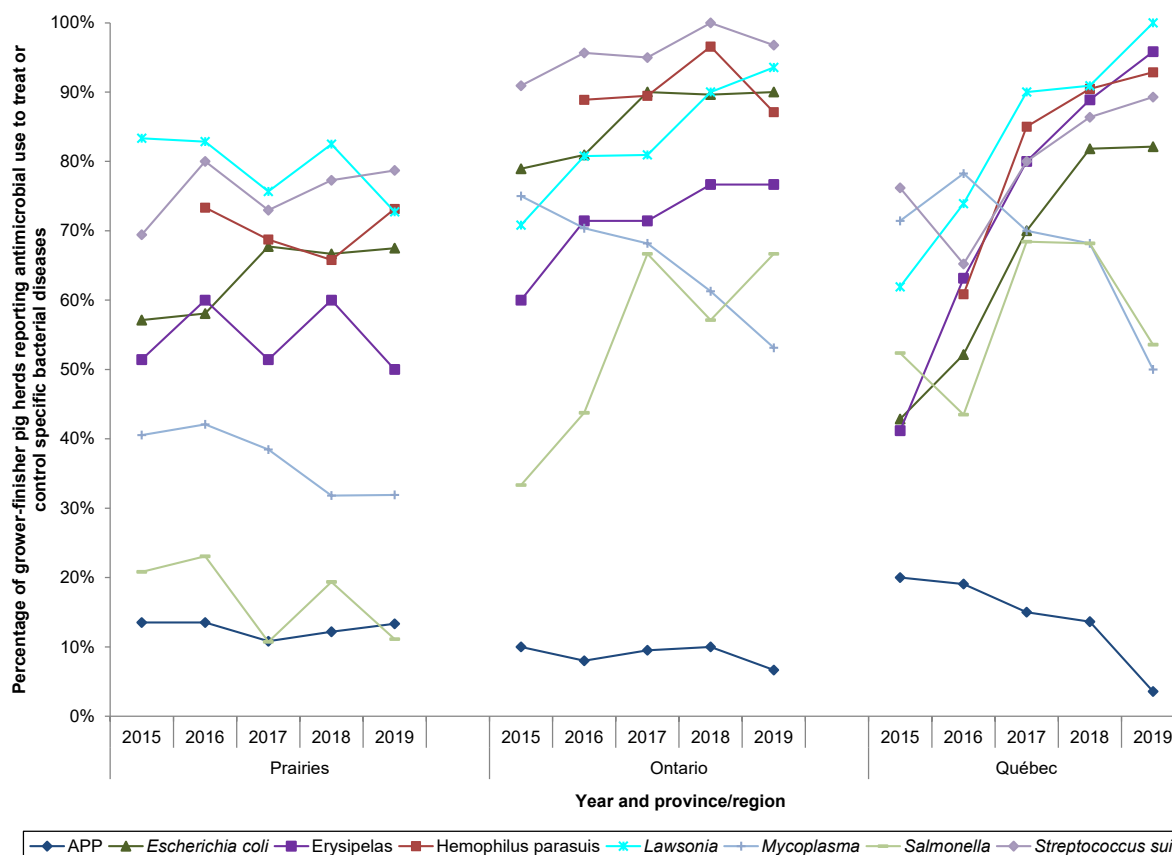

Number of diseases is tabulated based on the 13 diseases listed on the questionnaire.

All farms in Ontario reported at least 1 disease on the questionnaire.

Health status was considered to be positive if the questionnaire response was "Confirmed positive" or "Likely positive". Health status was considered to be negative if the questionnaire response was "Confirmed negative" or "Likely negative".

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

TGE = Transmissible Gastroenteritis.

Not all questionnaires were completed for all diseases listed.

Health status was considered to be positive if the questionnaire response was "Confirmed positive" or "Likely positive". Health status was considered to be negative if the questionnaire response was "Confirmed negative" or "Likely negative".

There are 3 primary stages of pig production: suckling pigs (pre-weaning, in sow herds), nursery pigs (weaning to 25 kg), and grower-finisher pigs (25 kg to market weight). Data on antimicrobial use in suckling and nursery pigs is required to understand total antimicrobial exposure.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Figure 1. 9 Reported antimicrobial use for specific diseases in sow herds supplying grower-finisher pig herds, by province/region, 2015 to 2019**a) Bacterial diseases****b) Viral diseases**

See corresponding footnotes on next page.

Figure 1. 9 Reported antimicrobial use for specific diseases in sow herds supplying grower-finisher pig herds, by province/region, 2015 to 2019 (continued)

APP = *Actinobacillus pleuropneumoniae*.

Hemophilus parasuis, added to the questionnaire in 2016.

PCVAD = Porcine Circovirus Associated Disease.

PED = Porcine Epidemic Diarrhea, added to the questionnaire in 2016.

PRRS = Porcine Reproductive and Respiratory Syndrome.

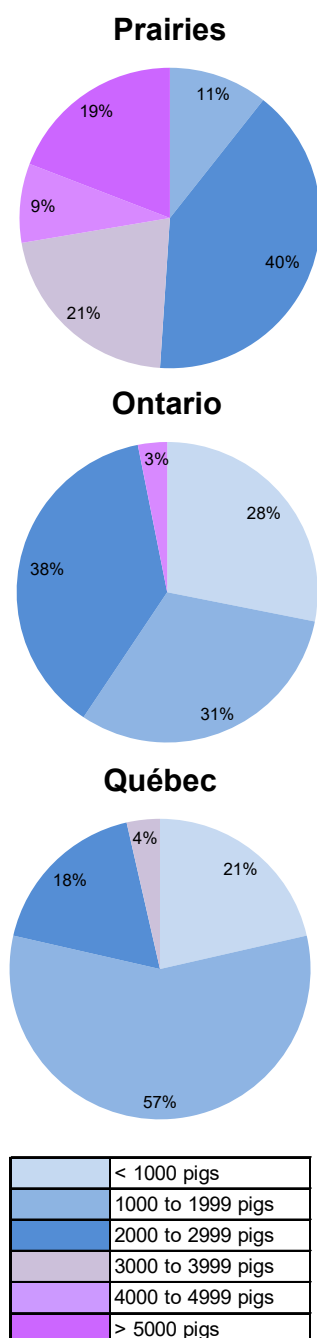

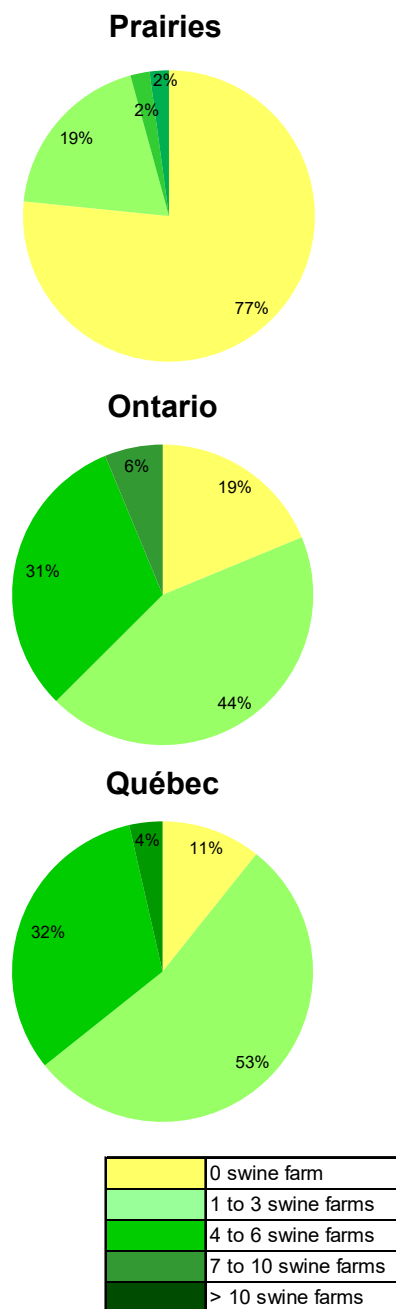

Transmissible Gastroenteritis (TGE) was not included in the sow herd survey.

Not all questionnaires were completed for all diseases listed.

Health status was considered to be positive if the questionnaire response was "Confirmed positive" or "Likely positive". Health status was considered to be negative if the questionnaire response was "Confirmed negative" or "Likely negative".

There are 3 primary stages of pig production: suckling pigs (pre-weaning, in sow herds), nursery pigs (weaning to 25 kg), and grower-finisher pigs (25 kg to market weight). Data on antimicrobial use in suckling and nursery pigs is required in order to understand total antimicrobial exposure.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Figure 1. 10 Demographics of grower-finisher pig herds, by province/region (n = 107), 2019**a) Barn Capacity****b) Number of swine farms within 2 km**

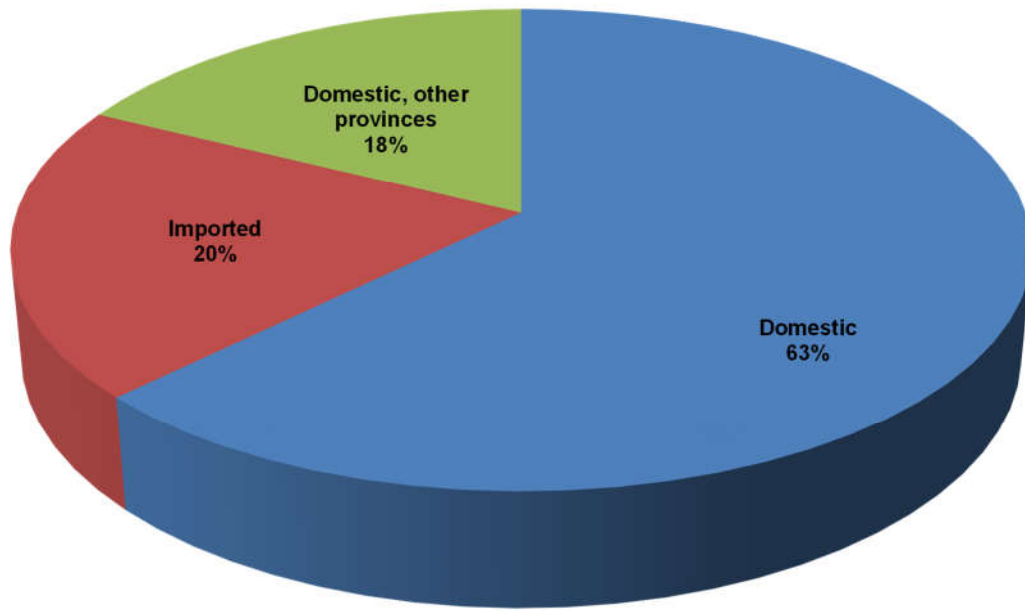

Capacity indicates the maximum number of pigs that the barn is designed to house.

Participating herds may have additional barns that were not sampled for the CIPARS program therefore this barn capacity is not necessarily equivalent to grower-finisher herd size.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Turkeys

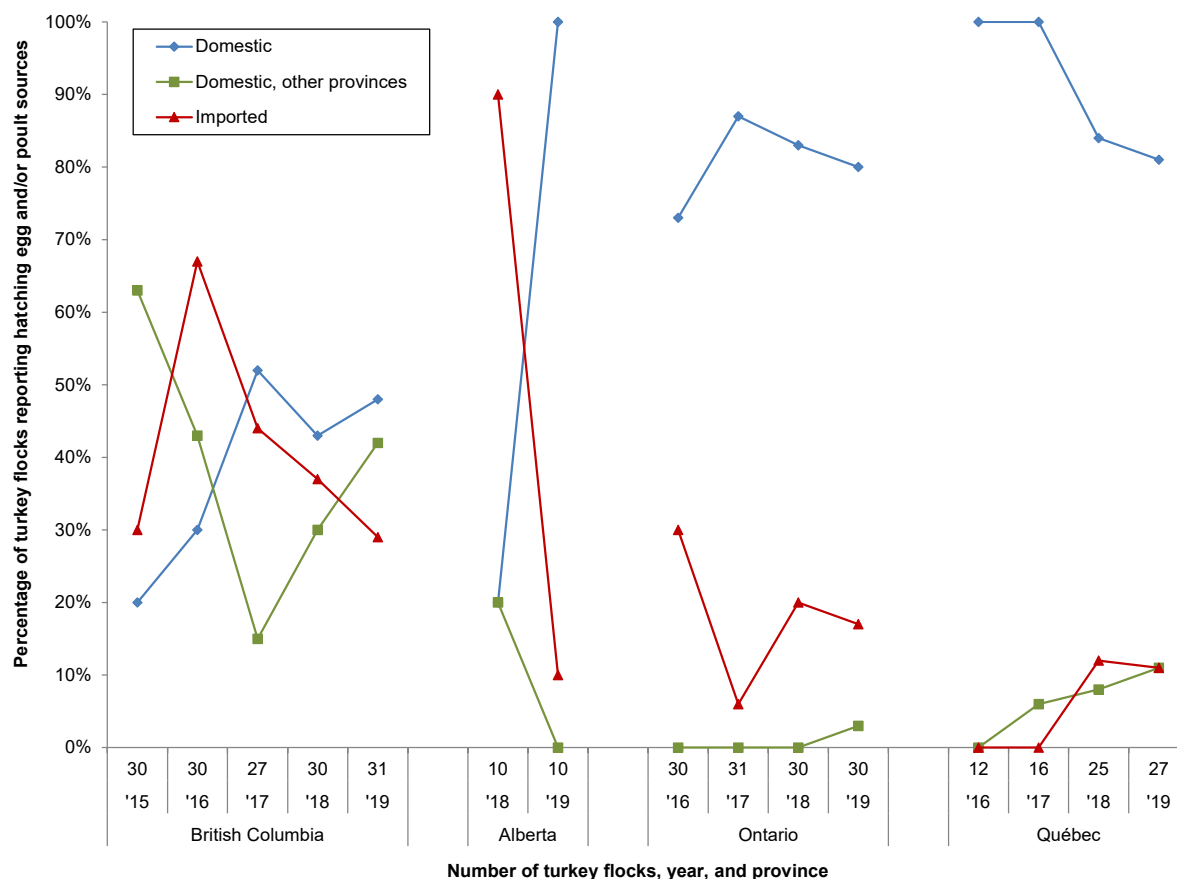

Figure 1. 11 Relative distribution of turkey poult sources, 2019

Domestic = hatching eggs originated and/or poults hatched from hatcheries located in the province where the birds were raised.

Domestic, other provinces = hatching eggs originated and/or poults hatched from hatcheries located in provinces other than the province where the birds were raised.

Imported = hatching eggs/poults were sourced by the importing hatchery from the United States or other countries; there were hatching eggs from domestic breeders hatched in United States hatcheries and then delivered/reared in Canadian turkey farms.

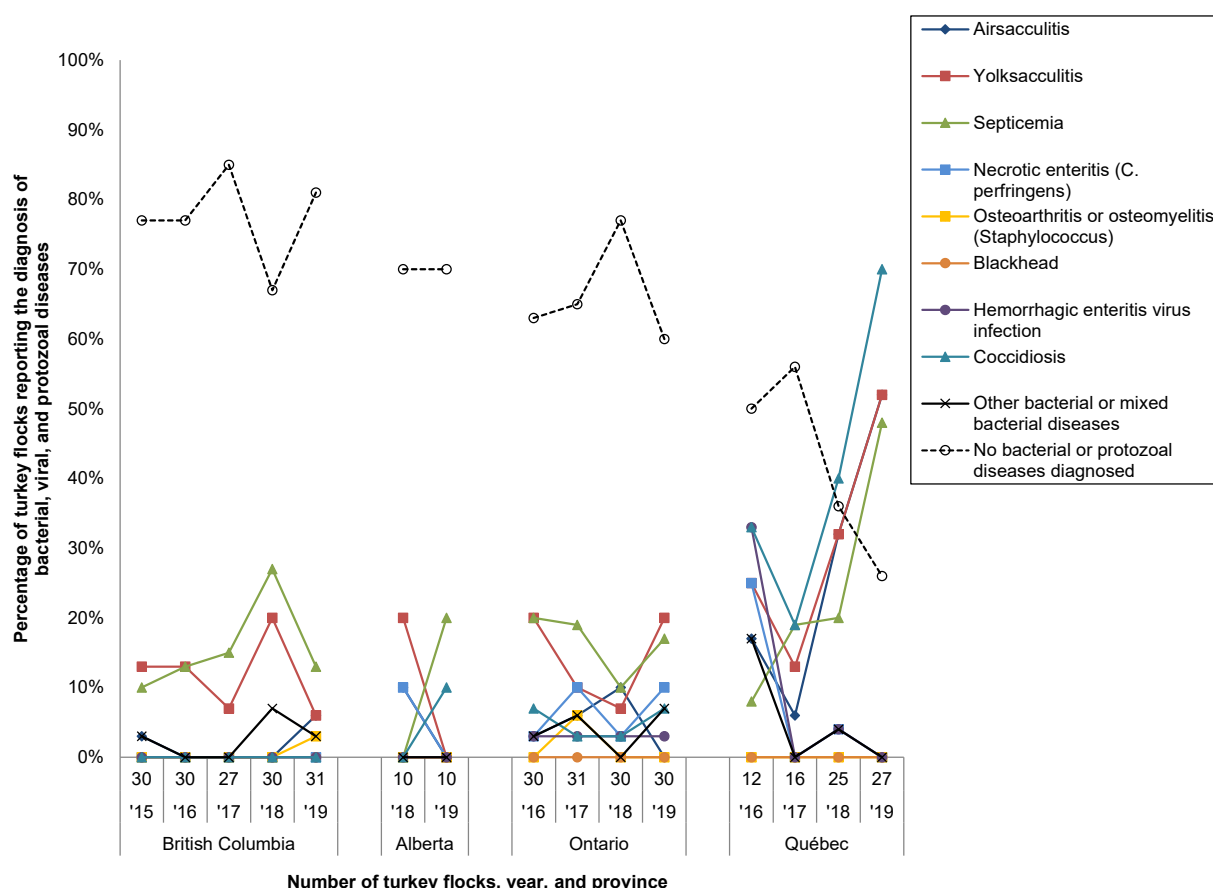

Figure 1. 12 Sources of hatching eggs and/or poults placed in the barn sampled, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario					Québec				
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'19	'16	'17	'18	'19	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	30	12	16	25	27	27
Hatching egg and/or poult sources																	
Domestic	20%	30%	52%	43%	48%	20%	100%	73%	87%	83%	80%	80%	100%	100%	84%	81%	81%
Domestic, other provinces	63%	43%	15%	30%	42%	20%	0%	0%	0%	0%	3%	0%	0%	6%	8%	11%	11%

Domestic = hatched from hatcheries located in the province where the birds were raised.

Domestic, other provinces = hatched from hatcheries located in provinces other than the province where the birds were raised.

Imported = hatching eggs and/or poults were sourced by importing hatchery from the United States or other countries.

Figure 1. 13 Percentage of turkey flocks reporting bacterial, viral, and protozoal diseases, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	12	16	25	27
Bacterial, viral, and protozoal diseases															
Airsacculitis	3%	0%	0%	0%	6%	10%	0%	3%	6%	10%	0%	17%	6%	32%	52%
Yolk sacculitis	13%	13%	7%	20%	6%	20%	0%	20%	10%	7%	20%	25%	13%	32%	52%
Septicemia	10%	13%	15%	27%	13%	0%	20%	20%	19%	10%	17%	8%	19%	20%	48%
Necrotic enteritis (<i>C. perfringens</i>)	0%	0%	0%	0%	0%	10%	0%	3%	10%	3%	10%	25%	0%	4%	0%
Osteoarthritis or osteomyelitis (<i>Staphylococcus</i>)	0%	0%	0%	0%	3%	0%	0%	0%	6%	0%	0%	0%	0%	0%	0%
Blackhead	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Hemorrhagic enteritis virus infection	0%	0%	0%	0%	0%	0%	0%	3%	3%	3%	3%	33%	0%	4%	0%
Coccidiosis	0%	0%	0%	0%	0%	0%	10%	7%	3%	3%	7%	33%	19%	40%	70%
Other bacterial or mixed bacterial diseases	3%	0%	0%	7%	3%	0%	0%	3%	6%	0%	7%	17%	0%	4%	0%
No bacterial or protozoal diseases diagnosed	77%	77%	85%	67%	81%	70%	70%	63%	65%	77%	60%	50%	56%	36%	26%

Health status was considered to be positive if the questionnaire response was "Confirmed positive" or "Likely positive". Health status was considered to be negative if the questionnaire response was "Confirmed negative" or "Likely negative". No diseases diagnosed pertains to flocks reporting "Likely Negative" in all diseases listed on the questionnaire.

In 2019, other bacterial diseases reported were pneumonia and sinusitis caused by *Ornithobacterium rhinotracheale* and salmonellosis. Other viral disease diagnosed was bluecomb enteritis, a Turkey Coronavirus Infection (TCoV).

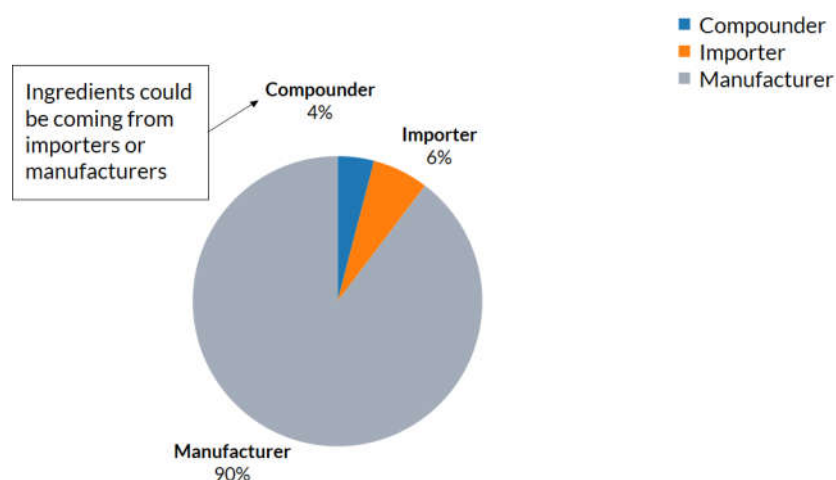

Chapter 2 Antimicrobials intended for use in animals

Antimicrobial sales: Veterinary Antimicrobial Sales Reporting (VASR)

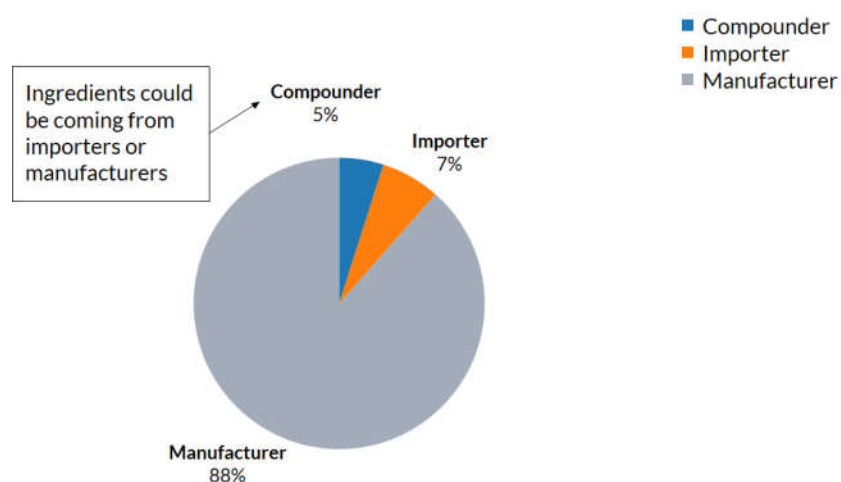

Data providers and quantities of antimicrobials reported

Figure 2. 1 Sources of medically important antimicrobials intended for use in animals, by percentage of kg sold, 2018 and 2019

a) 2018

b) 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials. Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Coverage of provincial/territorial data

Table 2. 1 Comparison of the quantities of medically important antimicrobials reported to be sold for use in animals at the provincial-level and at the national-level, all data providers, 2018 and 2019

2018	All data providers	Manufacturers	Importers	Compounders
# of data providers	204	30	5	169
Total kg reported at the national-level	1,135,230	1,017,979	71,162	46,089
Total kg reported at the provincial-level	1,079,004	983,688	52,533	42,783
% provincial reported (kg prov/kg national)	95.0%	96.6%	73.8%	92.8%
2019	All data providers	Manufacturers	Importers	Compounders
# of data providers	84	28	5	51
Total kg reported at the national-level	1,026,915	908,494	67,930	50,491
Total kg reported at the provincial-level	1,024,181	905,986	67,705	50,490
% provincial reported (kg prov/kg national)	99.7%	99.7%	99.7%	100.0%

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

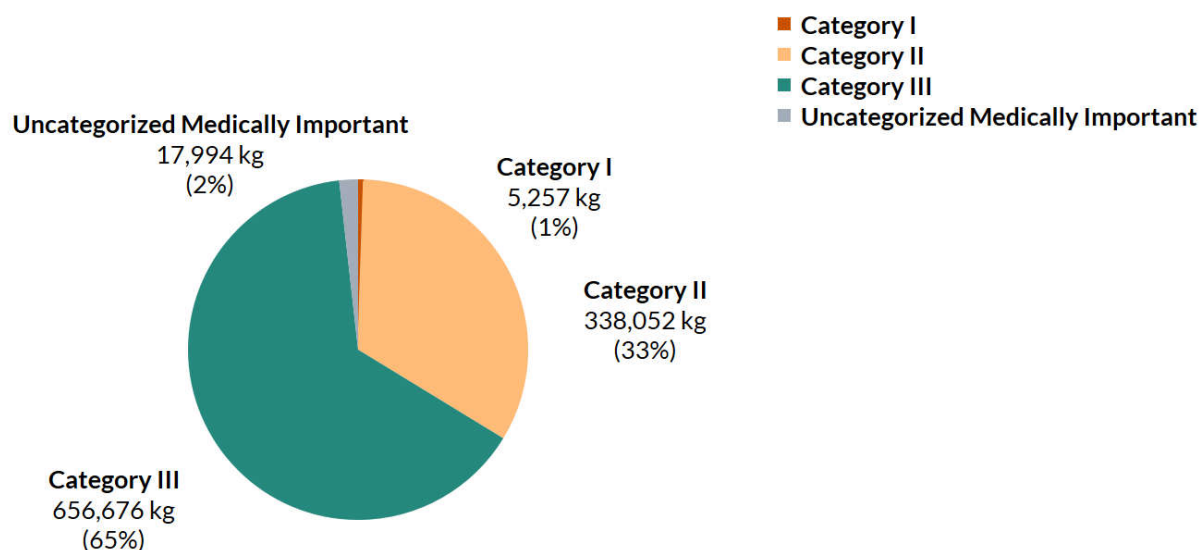

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

The numbers in the table are for data providers reporting > 1 mg of medically important antimicrobials.

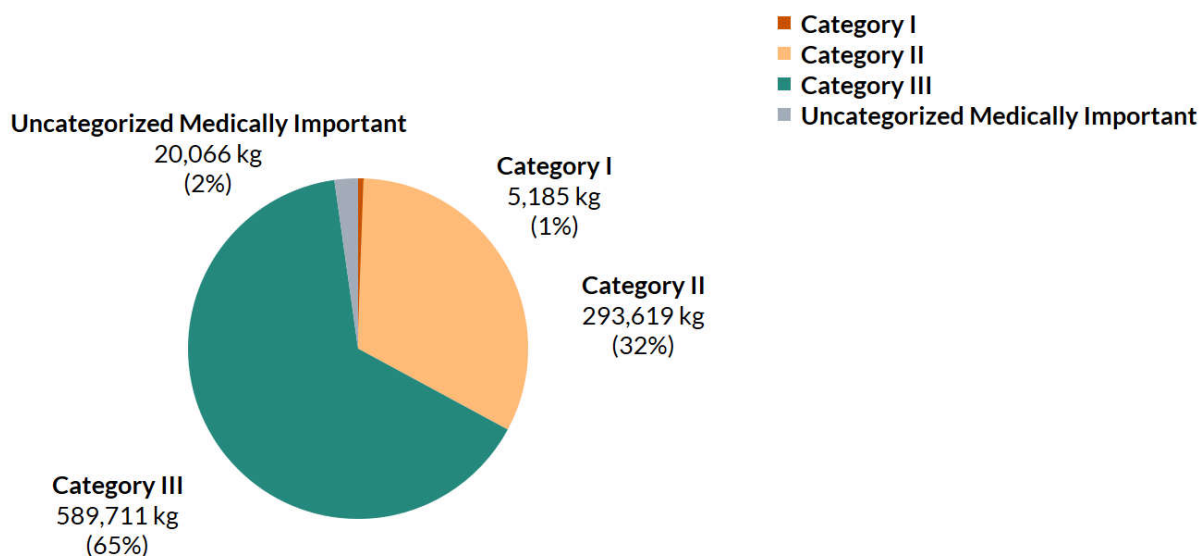

Antimicrobials sold by manufacturers

Figure 2. 2 Relative percentages of the quantities of medically important antimicrobials sold for use in animals (manufacturers), by category of importance to human medicine, 2018 and 2019

a) 2018

b) 2019

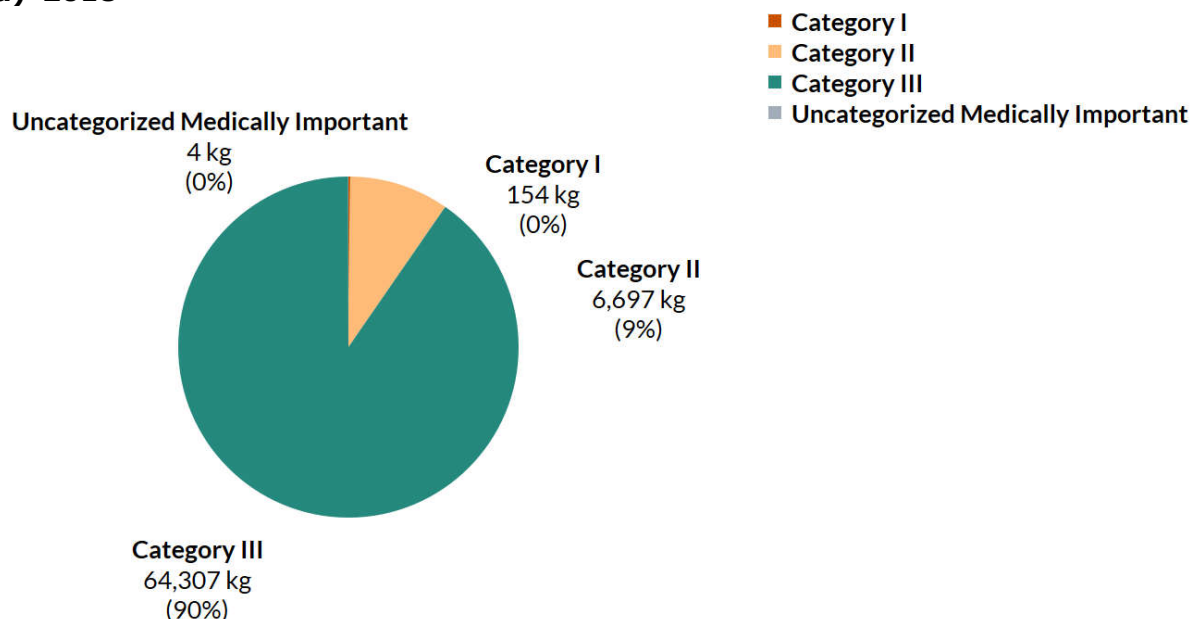

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

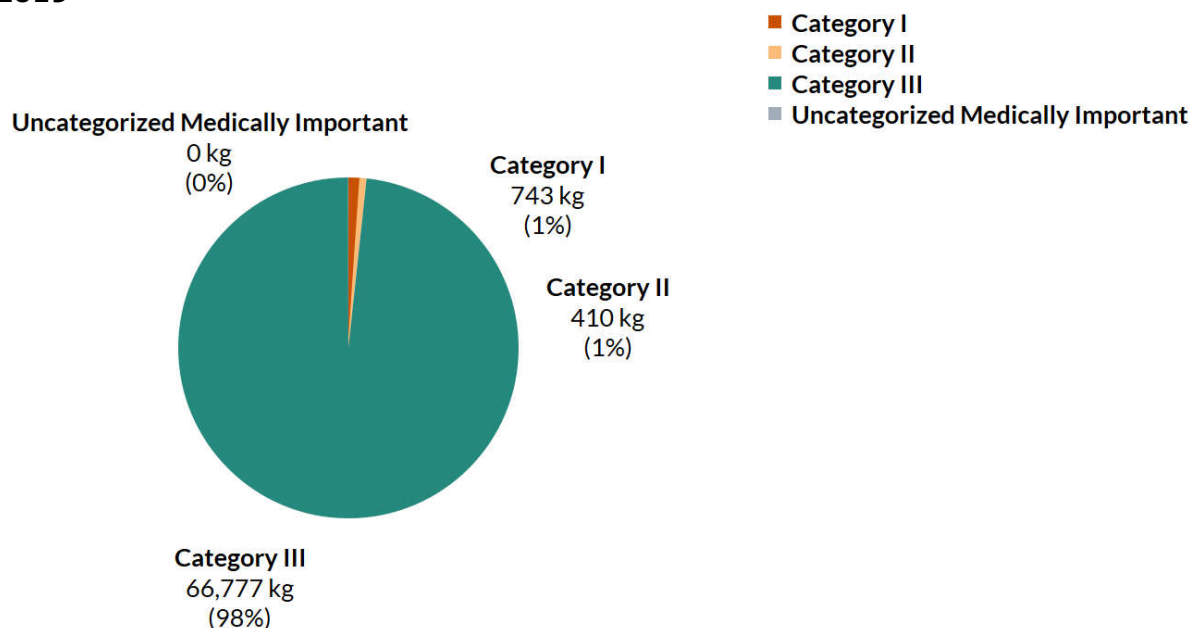

Antimicrobials sold by importers

Figure 2. 3 Relative percentages of the quantities of medically important antimicrobials sold for use in animals (importers), by category of importance to human medicine, 2018 and 2019

a) 2018

b) 2019

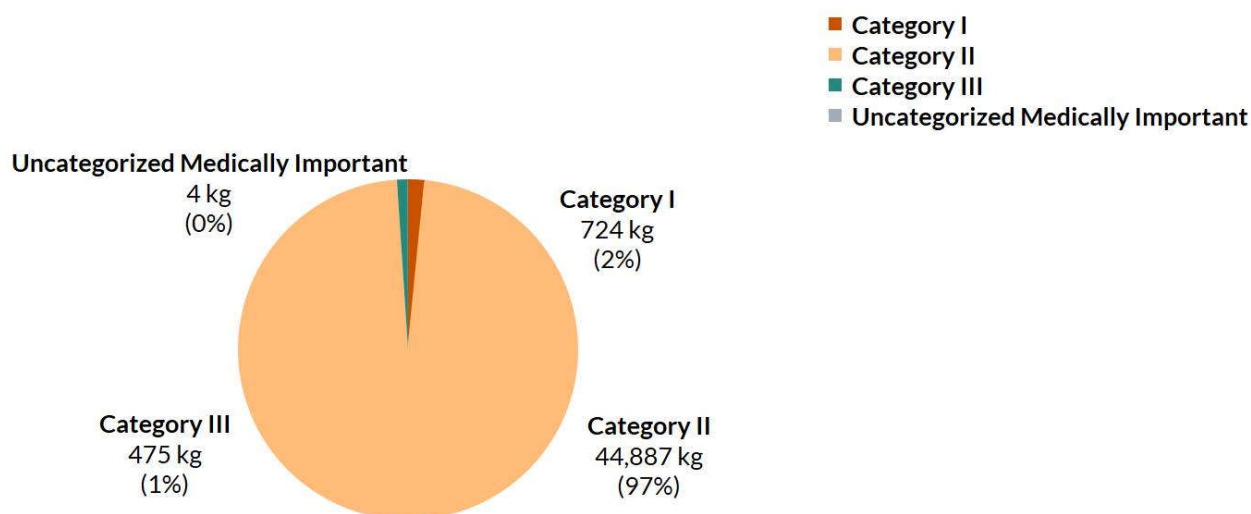

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

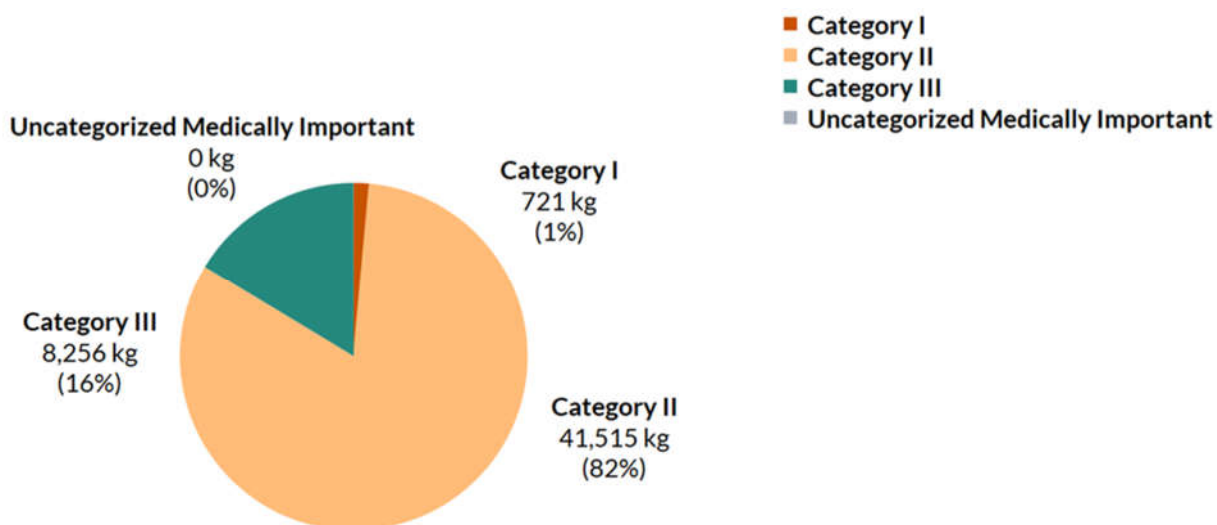

Antimicrobials sold by compounders

Figure 2. 4 Relative percentages of the quantities of medically important antimicrobials sold for use in animals (compounders), by category of importance to human medicine, 2018 and 2019

a) 2018

b) 2019

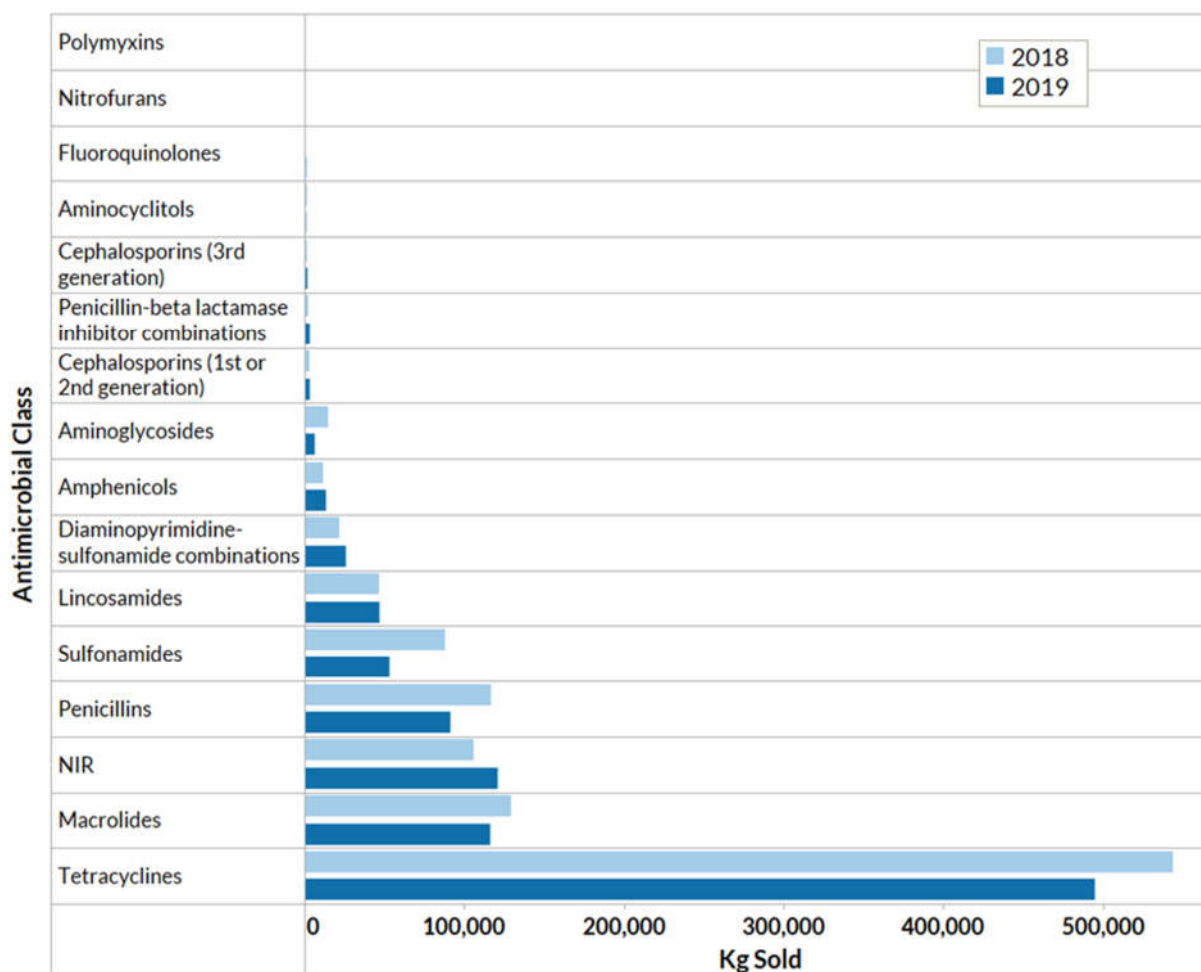

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Antimicrobials sold by antimicrobial class – national

Figure 2. 5 Quantities of medically important antimicrobials sold for use in animals (manufacturers and importers), by antimicrobial class, 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

Table 2. 2 Quantities of antimicrobials sold for use in animals (manufacturers and importers), by Category of Importance to Human Medicine and antimicrobial class, 2018 and 2019

Category of Importance to Human Medicine	Antimicrobial Class	2018 (kg)	2019 (kg)	Year diff (kg) (2019-2018)	% difference
Category I	Cephalosporins (3rd generation)	1,946	1,676	-270	-14
	Fluoroquinolones	716	937	221	31
	Penicillin-beta lactamase inhibitor combinations	2,636	2,748	112	4
	Polymyxins	16	8	-8	-50
Category II	Aminoglycosides	14,467	6,487	-7,980	-55
	Cephalosporins (1st or 2nd generation)	2,820	3,147	327	12
	Diaminopyrimidine-sulfonamide combinations	22,051	25,519	3,468	16
	Lincosamides	46,583	46,390	-193	0
	Macrolides	129,579	115,822	-13,757	-11
	Penicillins	117,222	91,095	-26,127	-22
Category III	Aminocyclitols	1,241	744	-497	-40
	Amphenicols	11,318	13,030	1,712	15
	Nitrofurans	49	23	-26	-53
	Sulfonamides	88,274	53,226	-35,048	-40
	Tetracyclines	544,102	495,116	-48,986	-9
NIR	NIR	106,121	120,455	14,334	14
Grand Total		1,089,141	976,423	-112,718	-10

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

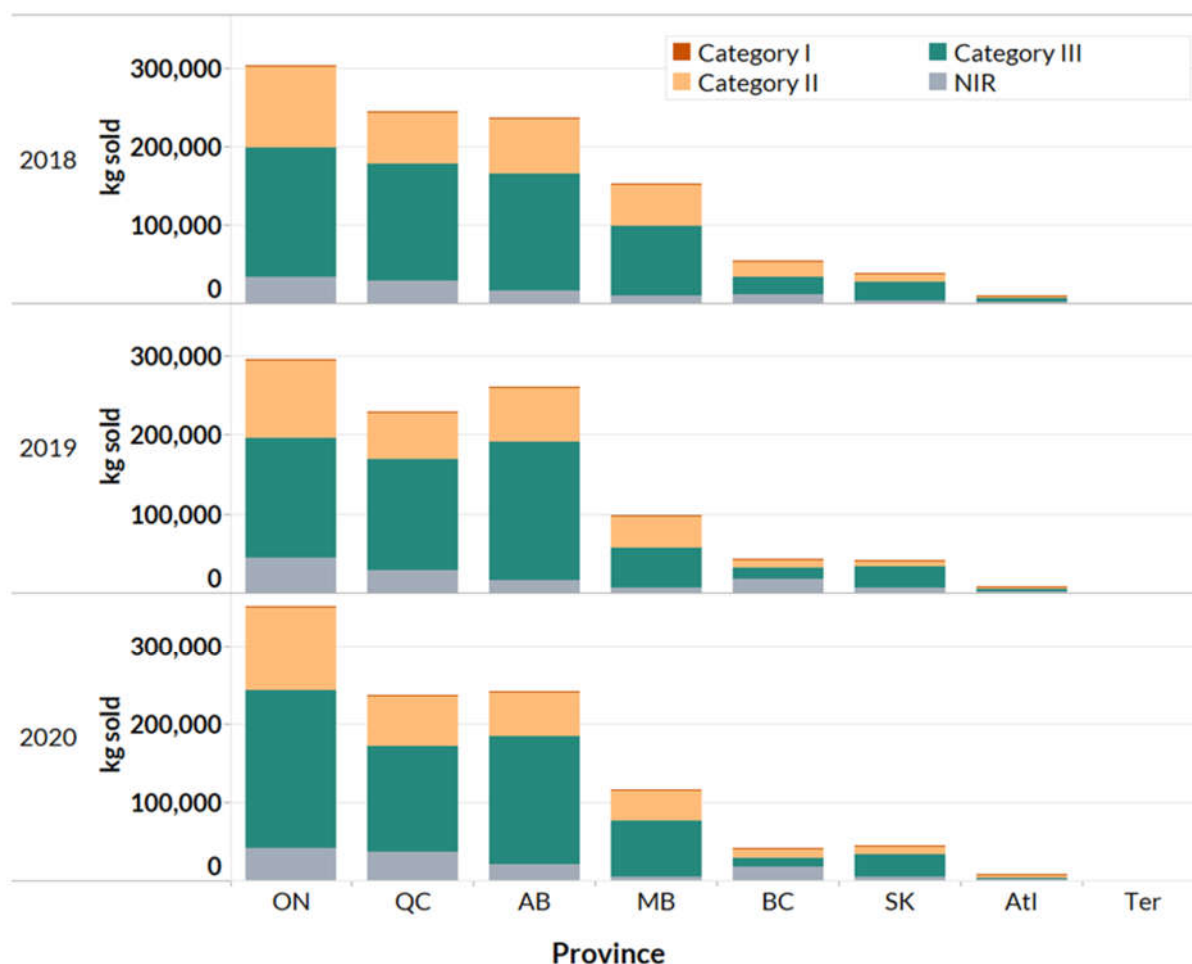

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis. Note: there are some antimicrobials included in NIR which are in the other antimicrobial categories (e.g., nitroimidazoles are Category I antimicrobials which cannot be reported separately).

Percentage difference is calculated in reference to the quantities reported in 2018.

Antimicrobials sold by antimicrobial class – provincial/territorial

Figure 2. 6 Quantities of medically important antimicrobials sold for use in animals (manufacturers and importers), by province and Category of Importance to Human Medicine, 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

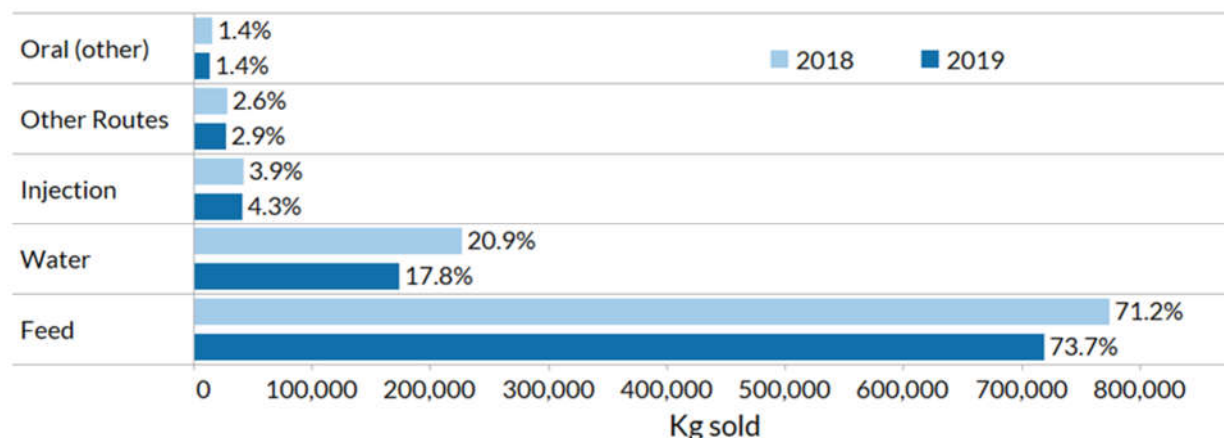

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

Differences in the quantities reported to be sold between the years could be related to the improvement in reporting for 2019, different numbers and types of animals in each province, differences in disease pressure, or differences in antimicrobial use or other management practices. There may be subsequent re-distribution of antimicrobials across provincial borders after the sales by the manufacturers and importers.

Antimicrobials sold by formulation

Figure 2. 7 Relative quantities (kg) of medically important antimicrobials sold by intended route of administration (manufacturers and importers), 2018 and 2019

Oral (other) = bolus, oral paste, oral powder (individual treatment), oral solution (individual treatment – mixtures and drops), tablets and capsules.

Other Routes = intrauterine, ophthalmic, otic, topical and intramammary.

Water = oral powder, oral powder (herd treatment), oral solution (herd treatment).

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Estimates of antimicrobials sold by animal species

Table 2. 3 Reported range and average estimates of kg of medically important antimicrobials sold by animal species, (manufacturers and importers), 2018

Animal species	Low kg	Average kg	High kg
Aquaculture	17,595	17,596	17,597
Beef Cattle	226,596	233,488	240,381
Cats and Dogs	6,373	6,373	6,373
Dairy Cattle	15,989	16,511	17,033
Horses	1,032	1,236	1,441
Other Animals/Unknown	9,859	10,274	10,690
Pigs	612,466	620,355	628,244
Poultry	146,366	147,853	149,340
Small Ruminants	17	43	69
Veal Calves	15,112	16,344	17,575
Total	1,051,405	1,070,073	1,088,743

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Note, there were a few data providers who were unable to provide their information by animal species; hence the overall total by animal species is less than the overall total kg provided for the calendar year.

Table 2. 4 Reported range and average estimates of range of kg of medically important antimicrobials sold by animal species, (manufacturers and importers), 2019

Animal species	Low kg	Average kg	High kg
Aquaculture	12,507	12,507	12,507
Beef Cattle	259,526	264,673	269,820
Cats and Dogs	7,407	7,440	7,472
Dairy Cattle	16,796	18,964	21,131
Horses	1,352	1,504	1,656
Other Animals/Unknown	10,016	10,093	10,170
Pigs	485,960	491,640	497,320
Poultry	130,185	134,351	138,517
Small Ruminants	22	68	114
Veal Calves	11,388	14,173	16,957
Total	935,159	955,413	975,664

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials. Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Note: there were a few data providers who were unable to provide their information by animal species; hence the overall total by animal species is less than the overall total kg provided.

Table 2. 5 Estimated mg/PCU_{EU} and mg/PCU_{CA} based on reported low and high kg of medically important antimicrobials sold by animal species, (manufacturers and importers), 2018

2018 (mg/PCU _{EU})			
Animal Species	Low	Average	High
Pigs	331	336	340
Poultry	173	175	177
Aquaculture	93	93	93
Cattle	78	80	83
Cats and Dogs	41	41	41
Horses	3	3	4
Small Ruminants	0.3	1	1
2018 (mg/PCU _{CA})			
Animal Species	Low	Average	High
Pigs	349	354	358
Poultry	195	197	199
Cattle	65	67	69
Aquaculture	93	93	93
Cats and Dogs	41	41	41
Horses	2	3	3
Small Ruminants	0.3	1	1

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Note: information from "Other Animal" species could not be ascribed to any of the current species; hence no denominator could be determined for these species and these data were excluded from this table. The denominator for aquaculture was calculated differently than for the terrestrial animal species. Please see the CIPARS 2019: Design and Methods for the approach to calculating the denominator (modified ESVAC approach).

Table 2. 6 Estimated mg/PCU_{EU} and mg/PCU_{CA} based on reported low and high kg of medically important antimicrobials sold by animal species, (manufacturers and importers), 2019

2019 (mg/PCU _{EU})			
Animal Species	Low	Average	High
Pigs	261	264	267
Poultry	150	154	159
Aquaculture	67	67	67
Cattle	84	87	90
Cats and Dogs	47	48	48
Horses	4	4	4
Small Ruminants	0.4	1	2
2019 (mg/PCU _{CA})			
Animal Species	Low	Average	High
Pigs	274	278	281
Poultry	170	175	181
Cattle	70	73	75
Aquaculture	67	67	67
Cats and Dogs	47	48	48
Horses	3	3	3
Small Ruminants	0.4	1	2

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

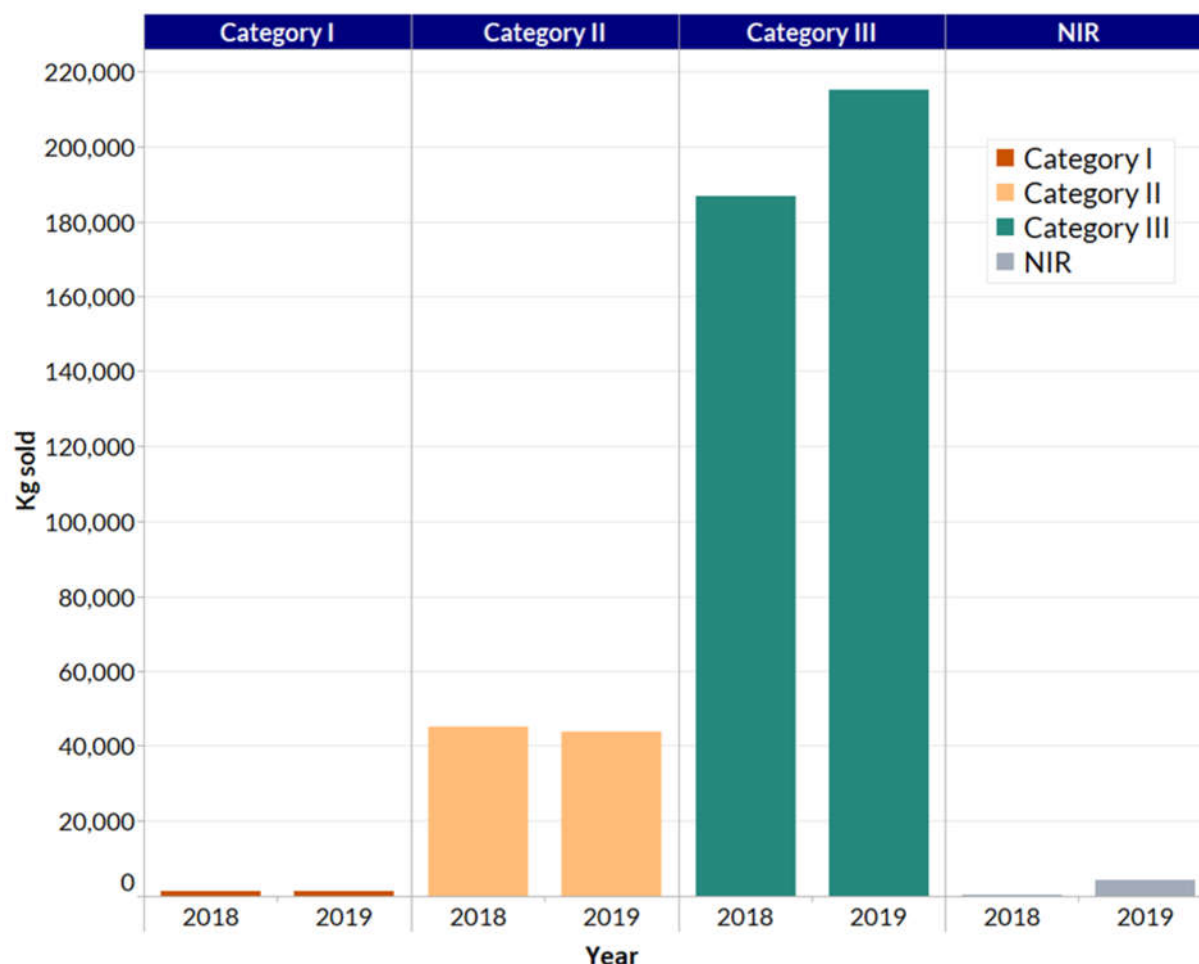

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see 2019 CIPARS: Design and Methods for details).

Note: information from "Other Animal" species could not be ascribed to any of the current species; hence no denominator could be determined for these species and these data were excluded from this table. The denominator for aquaculture was calculated differently than for the terrestrial animal species. Please see the CIPARS 2019: Design and Methods for the approach to calculating the denominator (modified ESVAC approach).

Detailed information by animal species

Beef Cattle

Figure 2. 8 Estimated average kilograms of medically important antimicrobials sold for use in beef cattle (manufacturers and importers) by Category of Importance to Human Medicine, 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

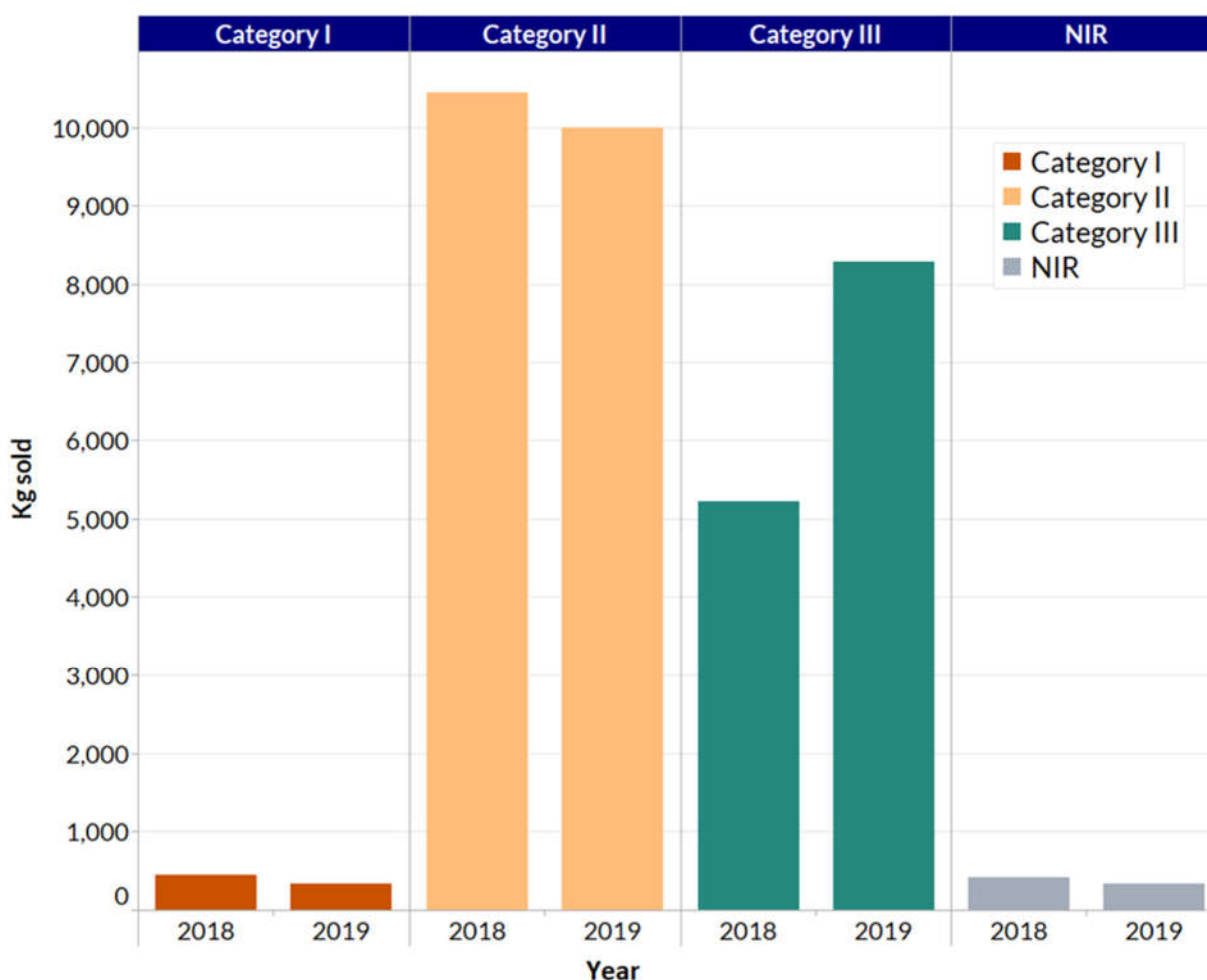

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

In 2019, the top 5 medically important antimicrobial classes sold for use in beef cattle were tetracyclines, macrolides, amphenicols, sulfonamides, and diaminopyrimidine-sulfonamide combinations and sulfonamides. Tetracyclines and macrolides represented ~91% of the total kg sold for use in beef cattle.

Dairy Cattle

Figure 2. 9 Estimated average kilograms of medically important antimicrobials sold for use in dairy cattle (manufacturers and importers), 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

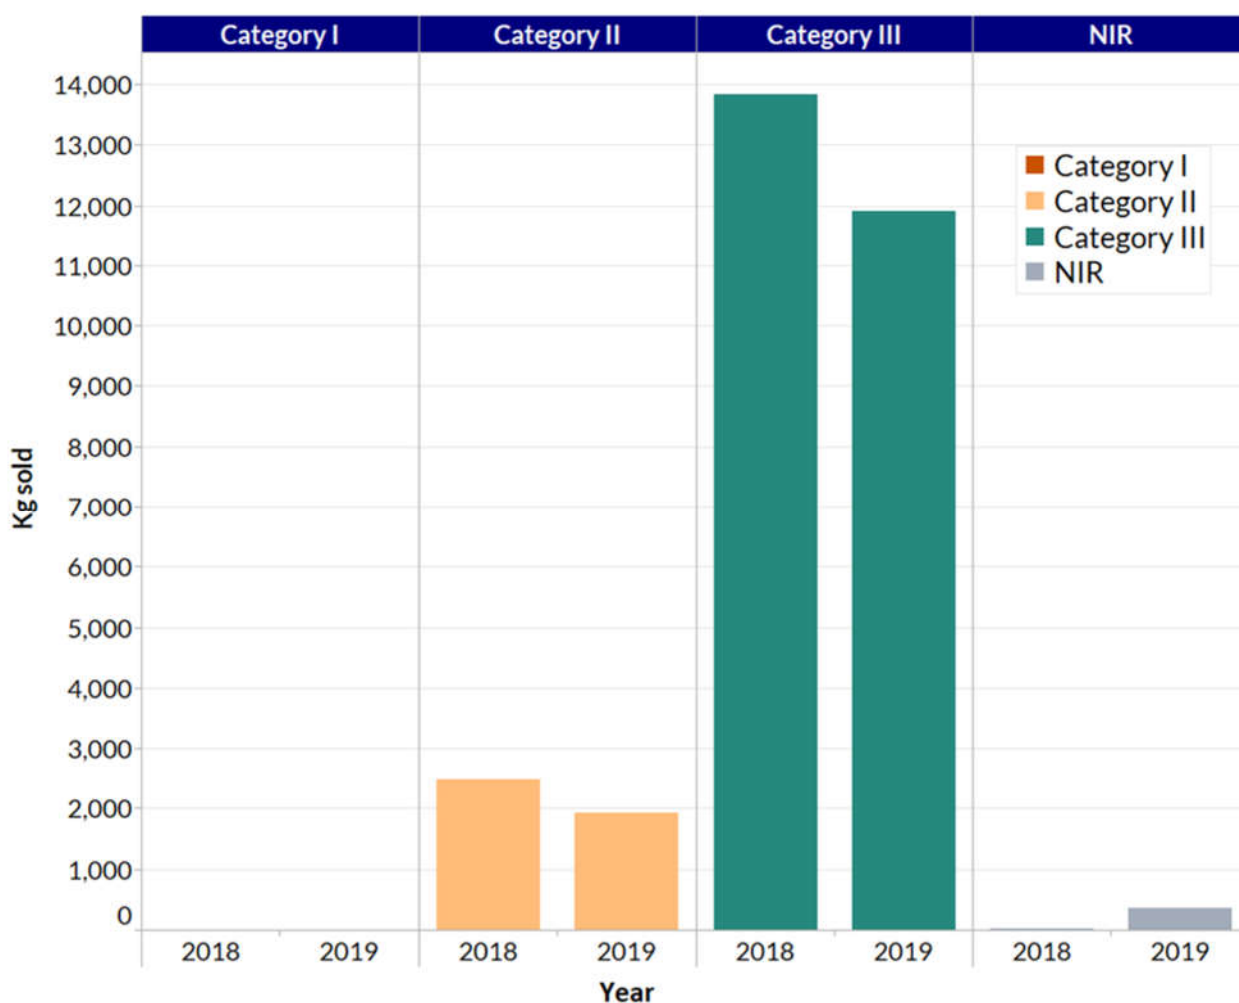

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

In 2019, the top 5 medically important antimicrobial classes sold for use in dairy cattle were tetracyclines, diaminopyrimidine-sulfonamide combinations, penicillins, sulfonamides, and amphenicols. Tetracyclines, diaminopyrimidine-sulfonamide combinations, and the penicillins represented ~87% of the total kg sold for use in dairy cattle.

Veal Calves

Figure 2. 10 Estimated average kilograms of medically important antimicrobials sold for use in veal calves (manufacturers and importers), 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

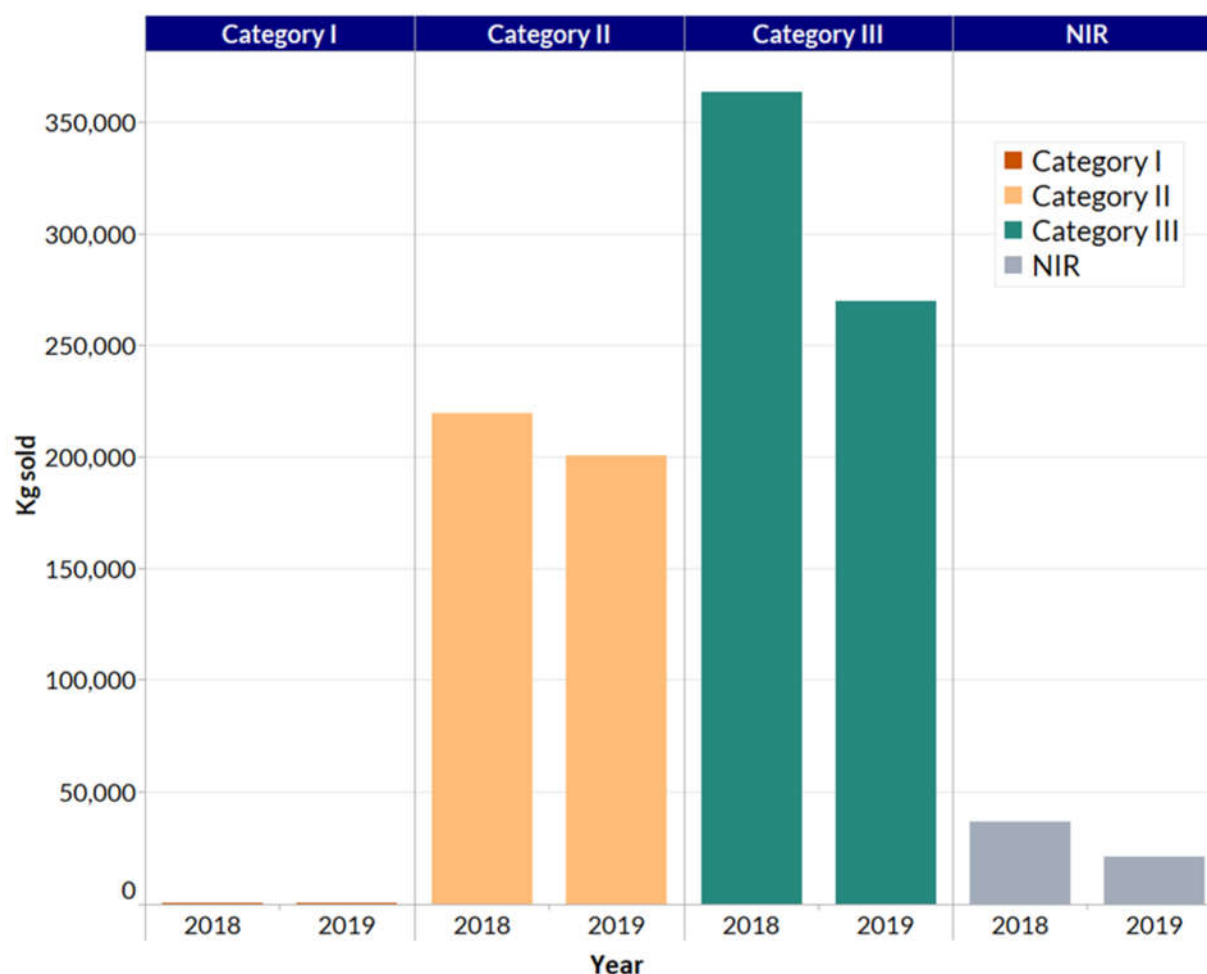

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

In 2019, the top 5 antimicrobial classes sold for use in veal calves were tetracyclines, penicillins, diaminopyrimidine-sulfonamide combinations, NIR, and sulfonamides. Tetracyclines represented ~81% of the total kg sold for use in veal calves.

Pigs

Figure 2. 11 Estimated average kilograms of medically important antimicrobials sold for use in pigs (manufacturers and importers), 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

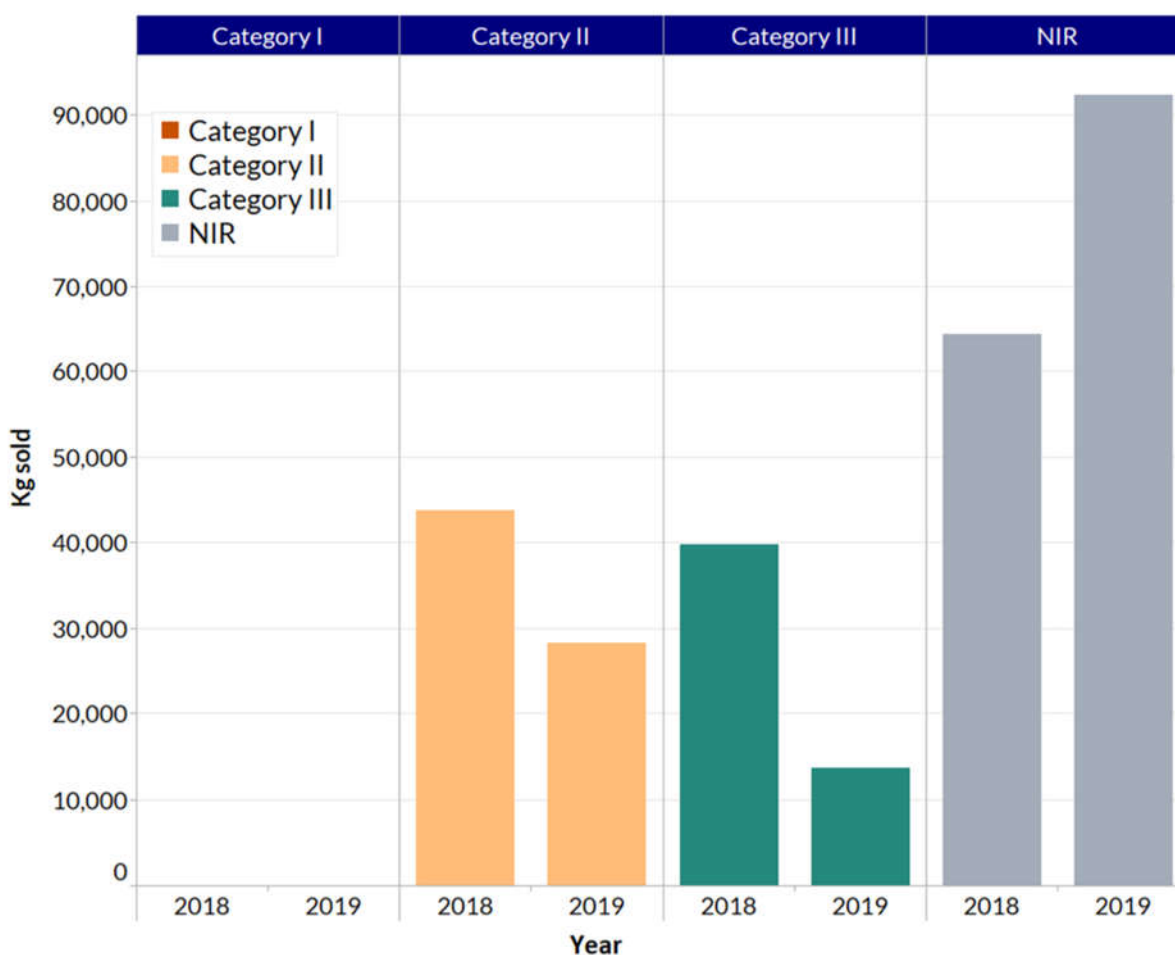

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

In 2019, the top 5 medically important antimicrobial classes sold for use in pigs were tetracyclines, macrolides, penicillins, lincosamides, and NIR. Tetracyclines, macrolides, and penicillins represented ~80% of the kg sold for use in pigs.

Poultry

Figure 2. 12 Estimated average kilograms of medically important antimicrobials sold for use in poultry (manufacturers and importers), 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

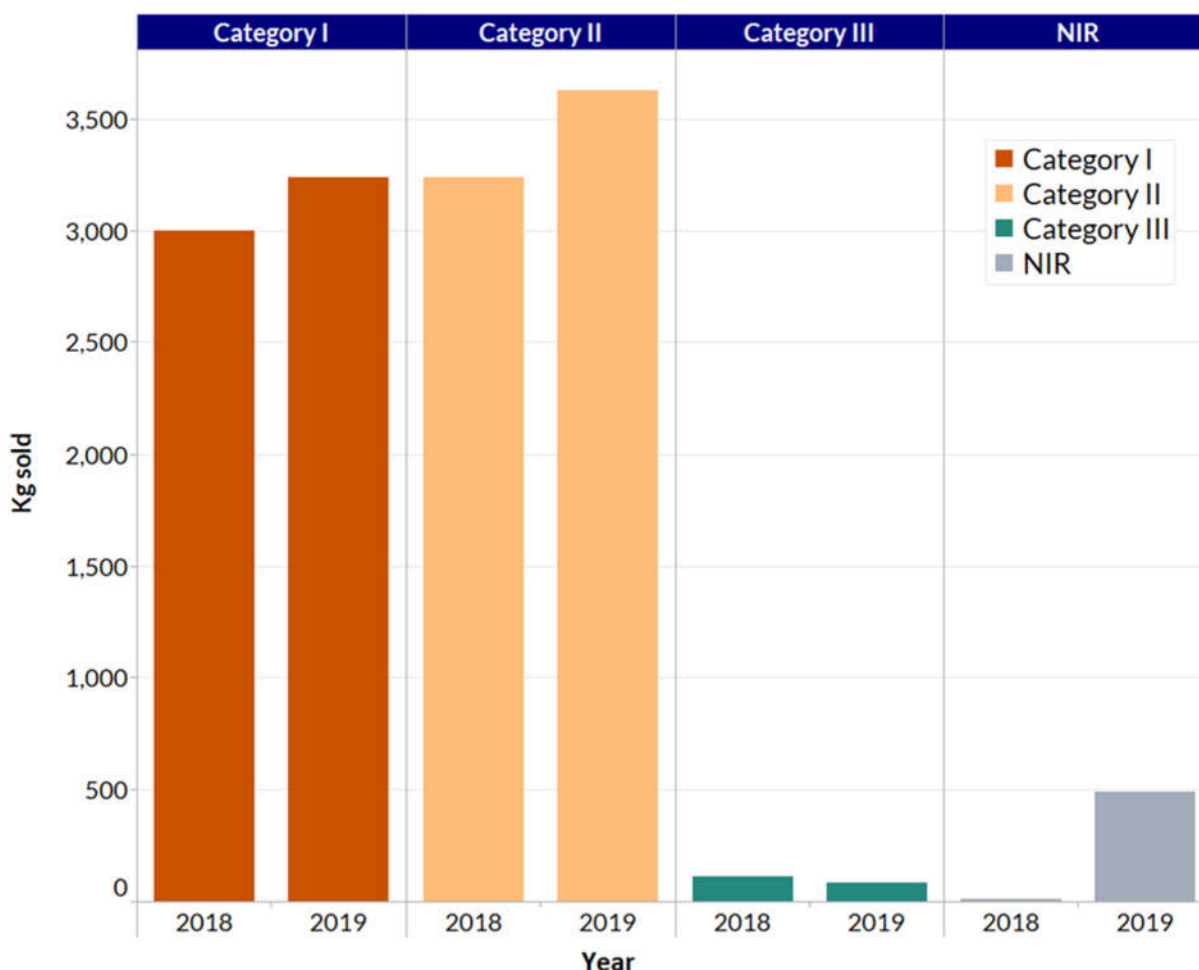

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

The kilograms reported for chickens and turkeys was combined as "poultry" as careful review of the data in both 2019 indicated that there may be more uncertainty with the quantities of antimicrobials reported for turkeys, than for the other major animal species. Data providers may have challenges separating out the estimates of use between these two types of poultry.

In 2019, the top 5 medically important antimicrobial classes sold for use in poultry were NIR, penicillins, tetracyclines, macrolides, and diaminopyrimidine-sulfonamide combinations. NIR and penicillins represented 80% of the quantities of antimicrobials sold for use in poultry.

Cats and dogs

Figure 2.13 Estimated average kilograms of medically important antimicrobials sold for use in cats and dogs (manufacturers and importers), 2018 and 2019

Included: Category I (very high importance to human medicine), II (high importance to human medicine), III (medium importance to human medicine) antimicrobials, Not Independently Reported antimicrobials (NIR), and Uncategorized Medically Important antimicrobials.

Excluded: antifungals, antiparasitics, antivirals, Category IV (low importance to human medicine) antimicrobials, and Uncategorized Not Medically Important antimicrobials (see CIPARS 2019: Design and Methods for details).

Not independently reported (NIR): aminocoumarins, bacitracins, diaminopyrimidines, fusidic acid, glycopeptides, nitroimidazoles, orthosomycins, phosphonic acid derivatives, pleuromutilins, pseudomonic acids, streptogramins, and therapeutic agents for tuberculosis.

In 2019, the top 5 medically important antimicrobial classes sold for use in cats and dogs were cephalosporins (1st or 2nd generation), penicillins, β -lactamase inhibitor combinations, NIR, penicillins, and fluoroquinolones. The cephalosporins (1st or 2nd generation) and penicillin- β -lactamase inhibitor combinations represented 77% of the total kg sold for use in cats and dogs.

Antimicrobial use: Farm Surveillance in broiler chickens

Please contact phac.cipars-picra.aspc@phac-aspc.gc.ca for more detailed information.

Summary of antimicrobial use by routes of administration

Table 2. 7 Number of broiler flocks with reported antimicrobial use, by route of administration, 2019

Antimicrobial use	Route of administration			
	Any route ^a n (%)	<i>In ovo</i> /subcutaneous n (%)	Feed n (%)	Water n (%)
Any antimicrobial use	114 (78)	3 (2)	112 (76)	14 (9)
No antimicrobial use ^b	33 (22)	144 (98)	35 (24)	134 (91)
Total flocks	147 (100)	147 (100)	147 (100)	147 (100)

^a Flocks with reported use of an antimicrobial class by feed, water, *in ovo*/subcutaneous, or any combination of these routes are included in each count.

^b These were flocks not medicated with any of the antimicrobials listed in Table 2. 8 (next page).

Table 2. 8 Frequency and quantity of antimicrobial use in broiler chickens, 2019

Quantity of antimicrobial active ingredient							
Route of administration	Antimicrobial	Flocks n (%)	Ration n (%)	Days exposed median (min. ; max.) ^a	Level of drug median (min. ; max.) ^b	mg/PCU	nDDDvetCA/ 1,000 Broiler chicken-days at risk
Feed		g/tonne					
II	Virginiamycin	2 (1)	6 (1)	30 (17 ; 43)	33 (22 ; 44)	1	9
	Trimethoprim sulfadiazine	8 (5)	8 (2)	9 (6 ; 12)	300 (200 ; 300)	15	67
III	Bacitracin	89 (61)	292 (61)	28 (26 ; 30)	55 (55 ; 110)	98	274
IV	Bambermycin	6 (4)	16 (3)	19 (2 ; 36)	2 (2 ; 2)	0.2	
N/A	Avilamycin	29 (20)	69 (14)	22 (20 ; 25)	20 (15 ; 30)	8	74
	No AMU in feed	35 (24)	87 (18)				
Total feed, medicated		112 (76)	391 (82)			122	425
Water		Treatments n (%)		mg/bird median (min ; max) ^c			
II	Amoxicillin	4 (3)	4	6 (5 ; 6)	83 (51 ; 124)	2	6
	Penicillin G potassium	7 (5)	7	6 (5 ; 7)	193 (107 ; 432)	14	10
	Penicillin-streptomycin	2 (1)	2	4 (4 ; 4)	116 (71 ; 160)	3	13
III	Sulfaquinoxaline	1 (1)	1	4	113	0	0
	Tetracycline	1 (1)	1	5	63	1	1
	No AMU in water	133 (90)					
Total water, medicated		14 (10)			20		29
Injection		mg/egg or chick					
II	Lincomycin-spectinomycin	3 (2)			0.75	0.01	0.1
	No AMU via injection	144 (98)					
Total injection		3 (2)			0.01		0.1
All routes ^d		114 (78)			142		454

See corresponding page for footnotes.

Table 2. 8 Frequency and quantity of antimicrobial use in broiler chickens, 2019 (continued)

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

N/A = not applicable (no classification available at the time of writing of this report).

Combination antimicrobials include the values for both antimicrobial components.

Grey shaded cells = no data or calculations/values are not applicable for broilers.

mg/PCU = milligrams/population correction unit.

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligrams per kilogram broiler chicken per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the CIPARS 2019: Design and Methods document, Table A. 1 for the list of standards.

nDDDvetCA/1,000 broiler chicken-days at risk = number of DDDvetCA/1,000 broiler chicken-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

^a Days exposed are by flock or full grow-out period (all rations combined) or 1 course of water treatment.

^b Level of drug is in grams/tonne of feed or grams/liter drinking water. In chicks or hatching eggs, level of drug is in milligrams per chick or hatching egg, as reported by the veterinarian/producer.

^c For water medications, the total milligrams per bird administered throughout the course of treatment is reported above; estimation methods changed where total products used by the flock was reported instead of grams per liter of drinking water (2013 to 2018 methods).

^d The final mg/PCU and nDDDvetCA/1,000 broiler chicken-days at risk exclude coccidiostats. Flavophospholipids was included only in the mg/PCU.

Table 2. 9 Production, biomass and quantity of antimicrobials used, by province/region, 2015 to 2019

Province/ region	Year	Number of flocks	Pre-harvest weight mean (kg)	Age sampled mean (days)	Active ingredient (mg)	Broiler weights (kg) ^a	mg/PCU		nDDDvetCA/1,000 broiler chicken- days at risk

See corresponding page for footnotes.

Table 2. 9 Production, biomass and quantity of antimicrobials used, by province/region, 2015 to 2019 (continued)

Some values presented in this report slightly differ from the previous year’s reports due to flock size corrections, improvement to the database and methodology refinements.

mg/PCU = milligrams/population correction unit.

ESVAC = European Surveillance of Veterinary Antimicrobial Consumption.

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligrams per kilogram broiler chicken per day (mg_{drug}/kg_{animal}/day); please refer to the CIPARS 2019: Design and Methods document, Table A. 1 for the list of standards.

nDDDvetCA/1,000 broiler chicken-days at risk = number of DDDvetCA/1,000 broiler chicken-days at risk.

For detailed indicator descriptions, please refer to the 2019 CIPARS: Design and Methods document.

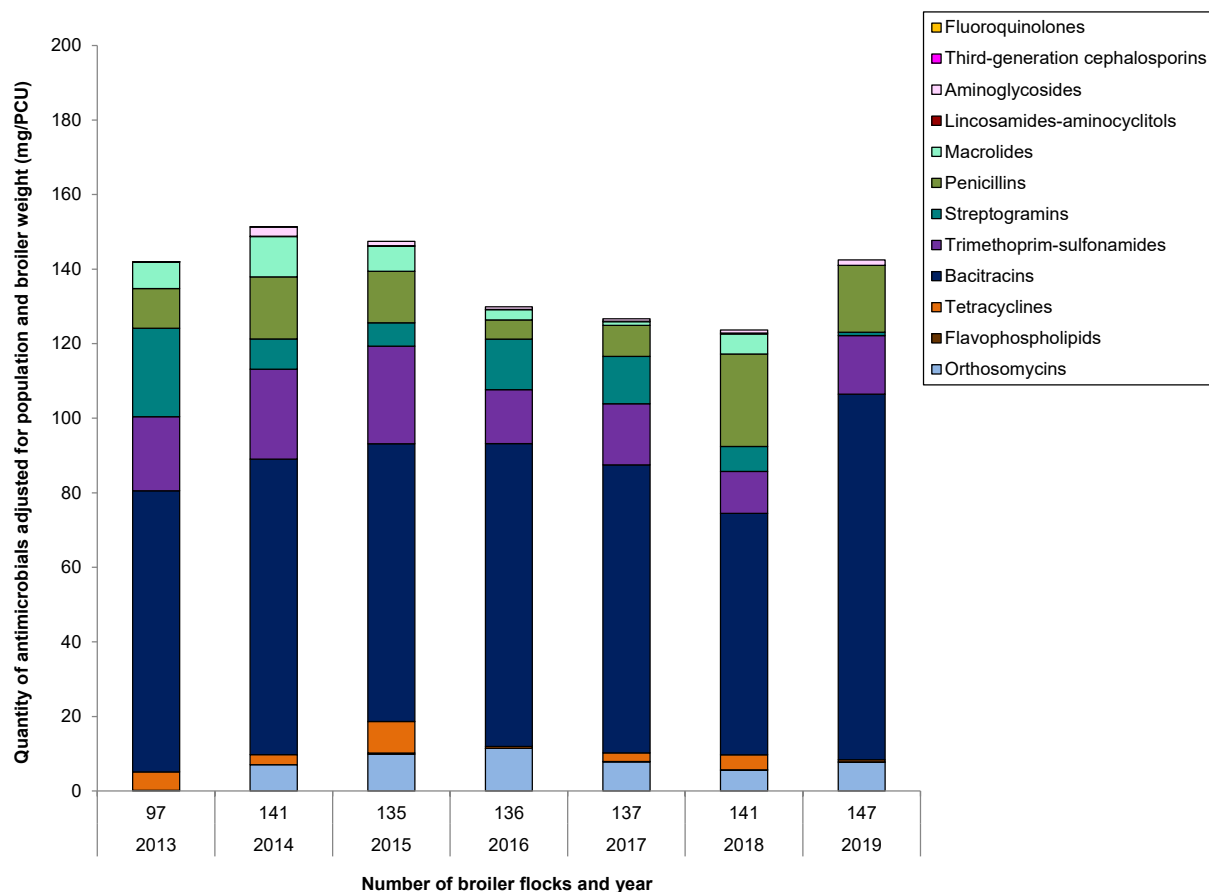

The Prairies is a region including the provinces of Alberta and Saskatchewan.

^a Population correction unit (PCU) or biomass, European weight (total flock population x ESVAC standard weight of 1 kg bird).

^b Percent change = [(current surveillance year – previous surveillance year)/previous surveillance year] x 100.

^c Includes only the provinces/regions surveyed and combines the quantity of antimicrobials used in feed, water and injection excluding coccidiostats, antiprotozoals and flavophospholipids.

Figure 2. 14 Quantity of antimicrobial use in all routes of administration, adjusted for population and broiler weight (mg/PCU), 2013 to 2019

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	97	141	135	136	137	141	147
Antimicrobial class

Streptogramins	241	84	63	139	129	68	9
Trimethoprim-sulfonamides	86	85	89	49	61	47	67
III Bacitracins	217	231	211	235	221	186	274
Tetracyclines	9	4	14	1	4	7	1
N/A Orthosomycins	0	71	97	114	77	56	74
Total	596	522	531	567	527	492	454

Roman numerals I to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification available at the time of writing of this report).

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligram per kilogram broiler weight per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the 2019 CIPARS Design and Methods, Table A. 1 for the list of standards.

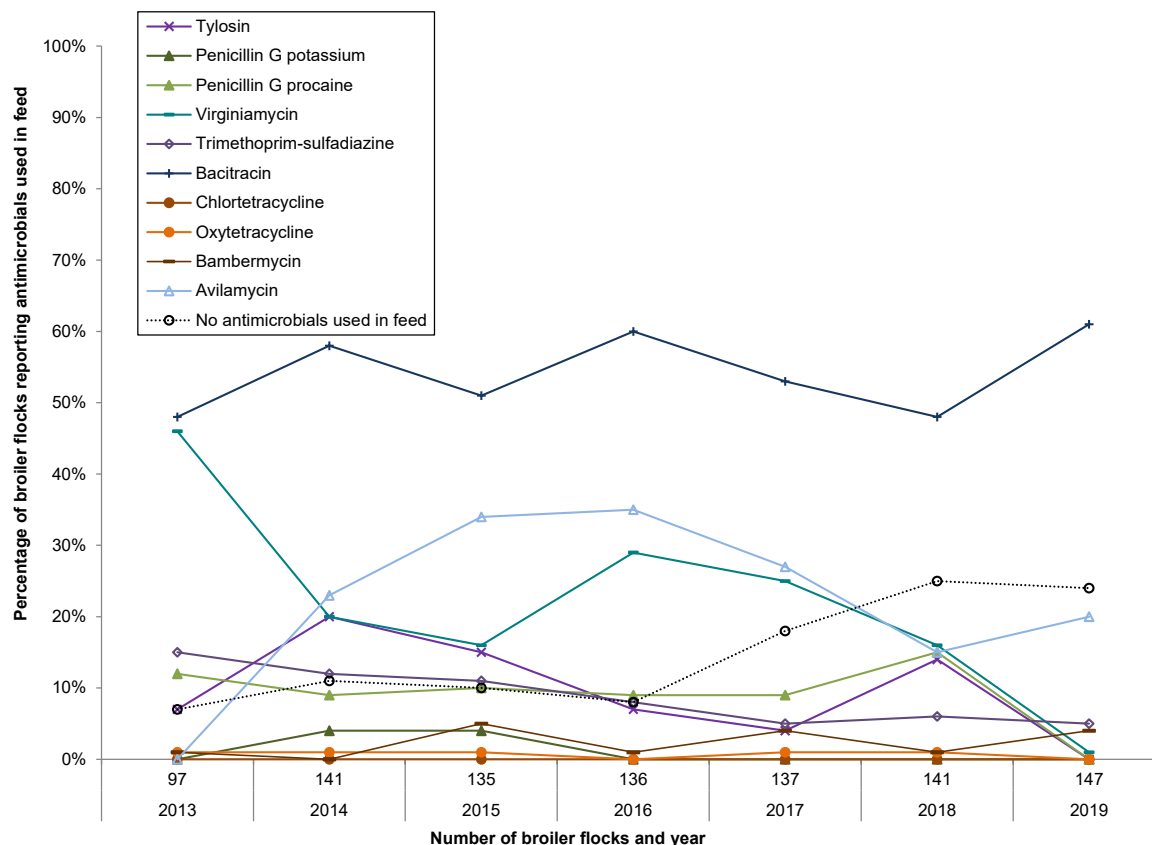

$\text{nDDDvetCA}/1,000$ broiler chicken-days at risk = Number of DDDvetCA/1,000 broiler chicken-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Please note, estimates have slightly changed from previous reports as a result of ongoing refinements to the database, flock population (flocks with no preharvest data excluded), dose corrections, and rounding.

Antimicrobial use in feed by frequency

Figure 2. 18 Percentage of broiler flocks reporting antimicrobial use in feed, 2013 to 2019

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	97	141	135	136	137	141	147
Antimicrobial							
I Tylosin	7%	20%	15%	7%	4%	14%	0%
II Penicillin G potassium	0%	4%	4%	0%	0%	0%	0%
II Penicillin G procaine	12%	9%	10%	9%	9%	15%	0%
II Virginiamycin	46%	20%	16%	29%	25%	16%	1%
II Trimethoprim-sulfadiazine	15%	12%	11%	8%	5%	6%	5%
III Bacitracin	48%	58%	51%	60%	53%	48%	61%
III Chlortetracycline	0%	0%	0%	0%	0%	0%	0%
III Oxytetracycline	1%	1%	1%	0%	1%	1%	0%
IV Bambermycin	1%	0%	5%	1%	4%	1%	4%
N/A Avilamycin	0%	23%	34%	35%	27%	15%	20%
No antimicrobials used in feed	7%	11%	10%	8%	18%	25%	24%

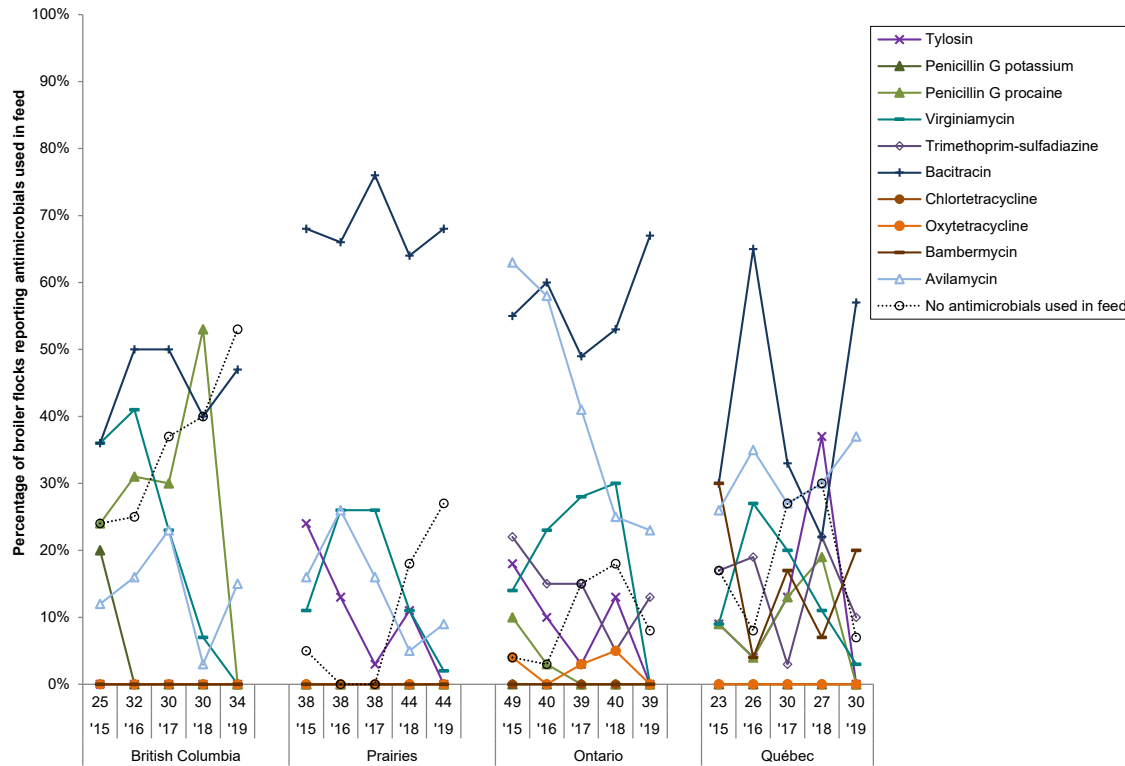

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification at the time of writing of this report).

Numbers per column may not add up to 100% as some flocks may have used an antimicrobial more than once or used multiple antimicrobials throughout the grow-out period.

For the temporal analyses, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in the first and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

Please note that the "no antimicrobials used in feed" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories II to IV and avilamycin).

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification at the time of writing of this report).

Numbers per column may not add up to 100% as some flocks may have used an antimicrobial more than once or used multiple antimicrobials throughout the grow-out period.

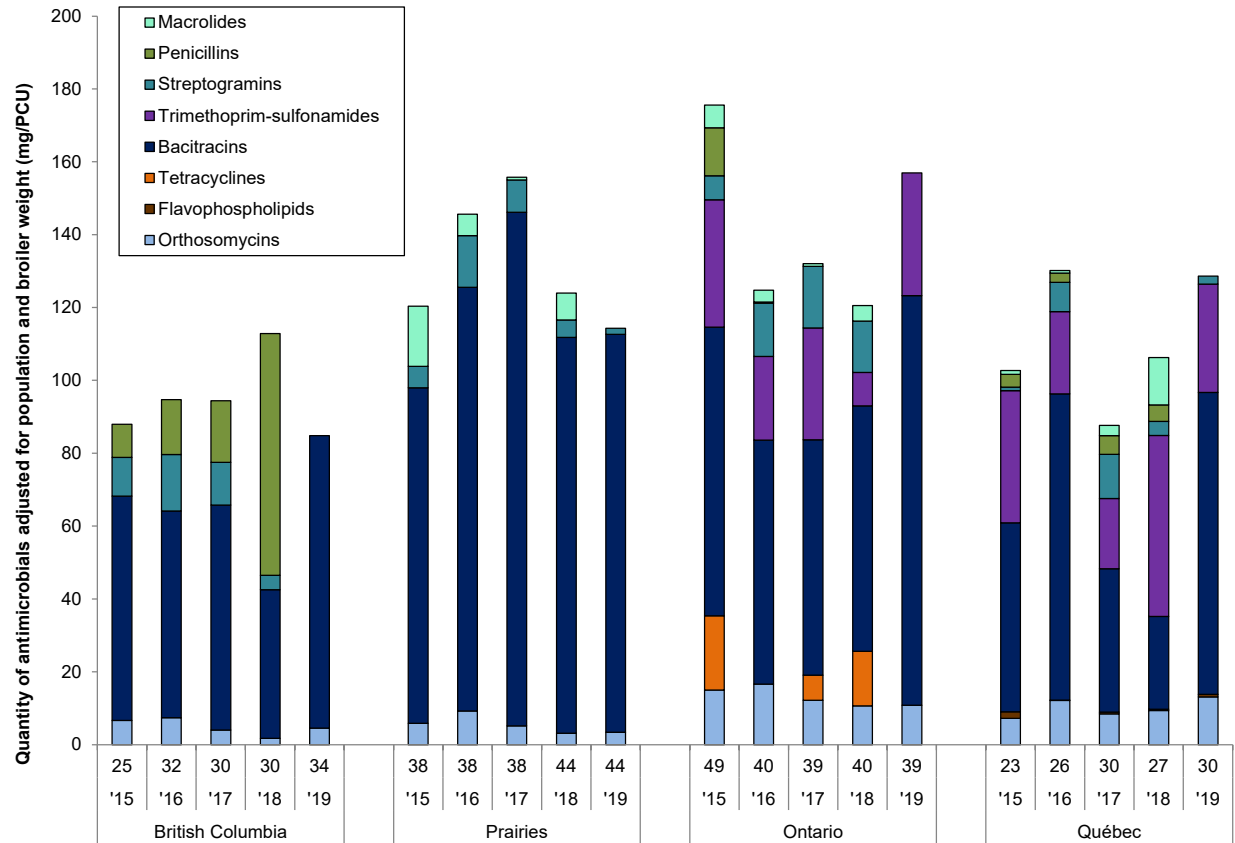

For the temporal analyses within province/region, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province/region ($P \leq 0.05$) for a given antimicrobial. The presence of red areas indicates significant provincial/regional differences ($P \leq 0.05$) for a given antimicrobial within the current year (Québec-referent province).

Please note that the "no antimicrobials used in feed" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories II to IV and avilamycin), some flocks have used coccidiostats; previous years' data were updated.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

Antimicrobial use *in ovo* or subcutaneous injection by frequency

Figure 2. 26 Percentage of broiler flocks reporting antimicrobial use *in ovo* or subcutaneous injection at the hatchery level, 2013 to 2019

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	97	141	135	136	137	141	147
Antimicrobial							
I Ceftiofur	32%	6%	0%	0%	0%	0%	0%
II Gentamicin	3%	5%	10%	3%	6%	1%	0%
II Lincomycin-spectinomycin	25%	24%	30%	20%	19%	16%	2%
No antimicrobials used at the hatchery	41%	65%	61%	77%	74%	82%	98%

Roman numerals I to II indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

Numbers per column may not add up to 100% due to rounding or batches of chicks (hatched at the same time to supply 1 barn) may have used more than one antimicrobial.

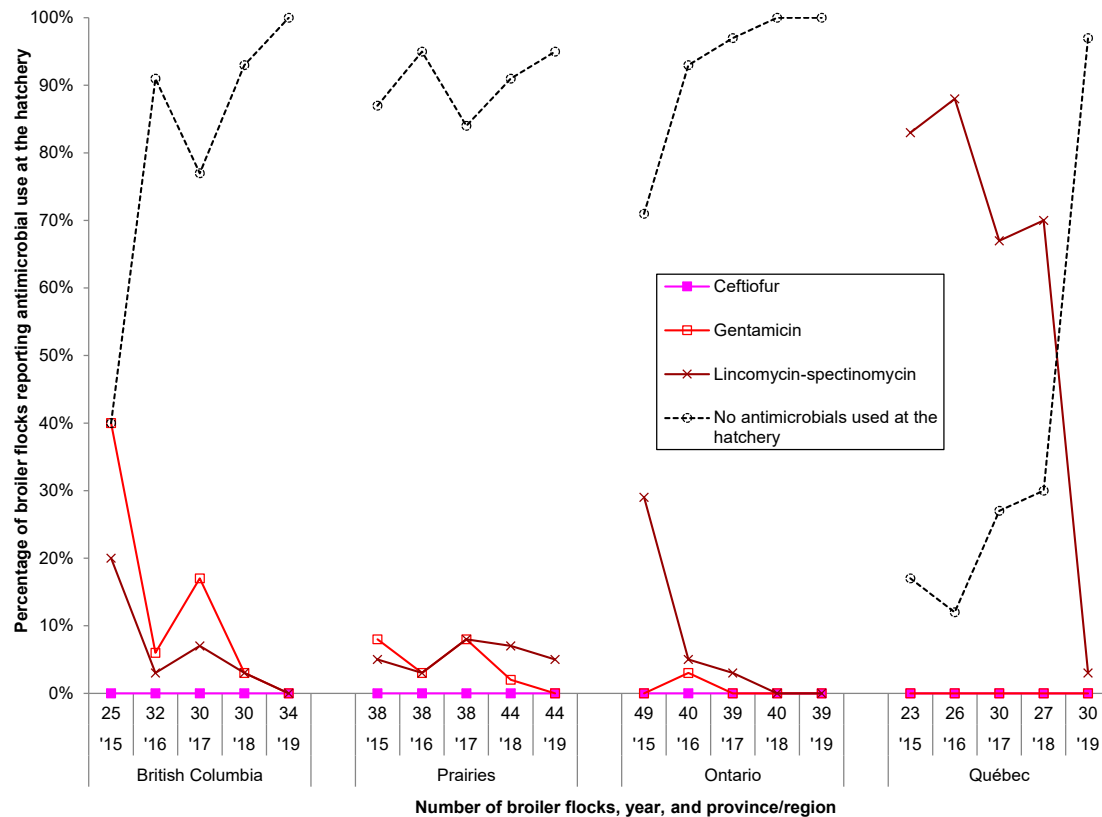

Data represent flocks medicated at the hatchery at day 18 of incubation or upon hatch.

For the temporal analyses, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in the first and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

Please note, percentages have slightly changed from previous reports as flocks with incomplete data were removed from the analysis above (2013 to 2017 flocks with chick placement but no pre-harvest information received).

Please note that the "no antimicrobials used at the hatchery" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories I to II).

Figure 2. 27 Percentage of broiler flocks reporting antimicrobials used *in ovo* or subcutaneous injection at the hatchery level, by province/region, 2015 to 2019

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

Please note, estimates have slightly changed from previous reports as flocks with incomplete data were removed from the analysis above (2013 to 2017 flocks with chick placement but no pre-harvest information received).

Coccidiostat use in feed by frequency

Figure 2. 30 Percentage of the quantity (milligrams of active ingredient) of antimicrobials used in broiler chicken flocks, 2013 to 2019

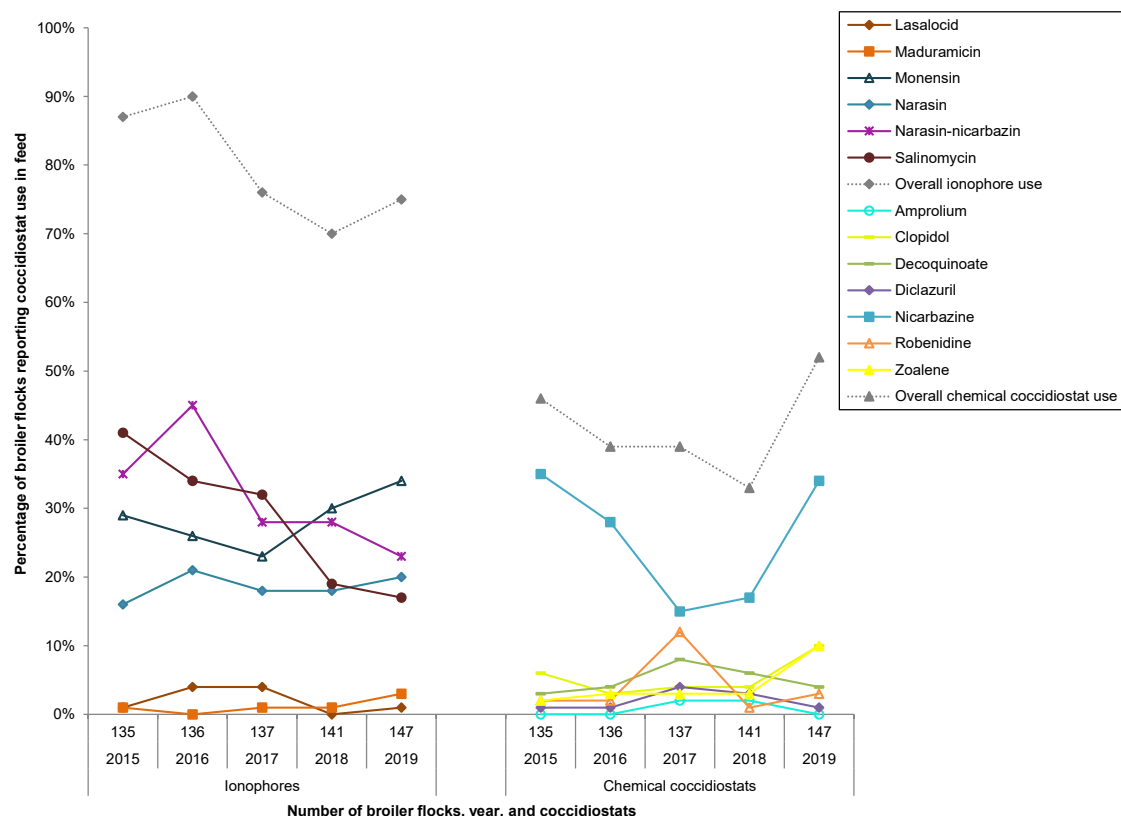

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	97	141	135	136	137	141	147
Antimicrobial classification							
Medically important antimicrobials ¹	39%	41%	40%	37%	41%	38%	38%
Ionophores	47%	46%	49%	53%	48%	51%	43%
Chemical coccidiostats	14%	13%	10%	9%	11%	11%	19%

Quantity of antimicrobials in milligrams active ingredients.

¹ Medically-important antimicrobials are the classes reported in the previous section³.

³ Government of Canada. Health Canada, Veterinary Drugs Directorate. List A: List of certain antimicrobial active pharmaceutical ingredients. Available at: <https://www.canada.ca/en/public-health/services/antibiotic-antimicrobial-resistance/animals/veterinary-antimicrobial-sales-reporting/list-a.html>.

Figure 2. 31 Percentage of broiler flocks reporting coccidiostat use in feed, 2015 to 2019

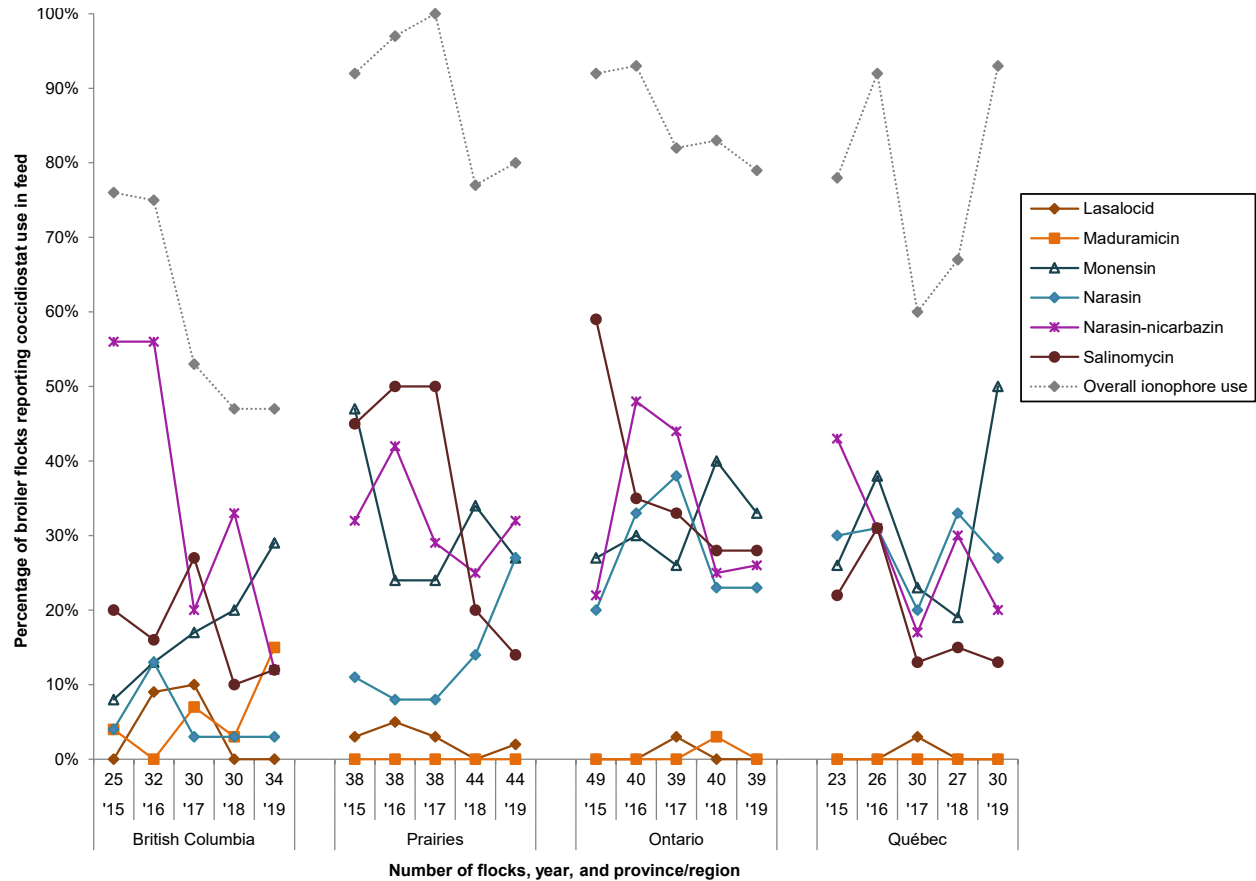

Year	2015	2016	2017	2018	2019
Number of flocks	135	136	137	141	147
Coccidiostat					
Lasalocid	1%	4%	4%	0%	1%
Maduramicin	1%	0%	1%	1%	3%
Monensin	29%	26%	23%	30%	34%
Narasin	16%	21%	18%	18%	20%
Narasin-nicarbazin	35%	45%	28%	28%	23%
Salinomycin	41%	34%	32%	19%	17%
Overall ionophore use	87%	90%	76%	70%	75%
Chemical coccidiostat					
Amprolium	0%	0%	2%	2%	0%
Clopidol	6%	3%	4%	4%	10%
Decoquinoate	3%	4%	8%	6%	4%
Diclazuril	1%	1%	4%	3%	1%
Nicarbazine	35%	28%	15%	17%	34%
Robenidine	2%	2%	12%	1%	3%
Zoalene	2%	3%	3%	3%	10%
Overall chemical coccidiostat use	46%	39%	39%	33%	52%

Roman numeral IV indicates category of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification at the time of writing of this report).

For the temporal analyses, the proportion (%) of flocks using a specific coccidiostat in the current year has been compared to the proportion (%) of flocks using the same coccidiostat in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given coccidiostat.

Figure 2. 32 Percentage of broiler flocks reporting ionophore coccidiostats in feed, by province/region, 2015 to 2019

Roman numeral IV indicates category of importance to human medicine as outlined by the Veterinary Drugs Directorate.

For the temporal analyses within province/region, the proportion (%) of flocks using a specific ionophore in the current year has been compared to the proportion (%) of flocks using the same ionophore in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province/region ($P \leq 0.05$) for a given ionophore. The presence of red areas indicates significant provincial/regional differences ($P \leq 0.05$) for a given ionophore within the current year (Québec-referent province). The Prairies is a region including the provinces of Alberta and Saskatchewan.

See corresponding page for footnotes.

Table 2. 10 Frequency and quantity of antimicrobial use in grower-finisher pigs, by route of administration, 2019 (continued)

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. UC = tiamulin is a medically important but uncategorized (UC) antimicrobial.

Grey shaded cells = no data or calculations/values are not applicable for grower-finisher pigs.

AMU = antimicrobial use.

mg/PCU = milligrams/population correction unit.

DDDvetCA = Canadian Defined Daily Doses (average labelled dose) in milligrams per kilogram grower-finisher pig weight per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the CIPARS 2019: Design and Methods document, Table A. 2 for the list of standards.

nDDDvetCA/1,000 GF pig-days at risk = number of DDDvetCA/1,000 grower-finisher pig-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

^a Ration days exposed = for rations medicated with the specific antimicrobial and do not reflect the full grow-out period.

^b Median weight at exposure = the median of all average weights of pigs exposed to a ration containing a specific antimicrobial $[(\text{Ration Start Weight} + \text{Ration End Weight})/2]$.

^c Minimum (min.) and maximum (max.) pig weight at exposure = the lowest start weight and the highest end weight reported for all rations containing the specific antimicrobial, respectively.

^d Level of drug is in grams/tonne of feed.

^e Quantitative antimicrobial consumption estimates were calculated using reported ration days fed and predicted feed intake⁴, adjusted for herd average daily gain; only rations medicated with the specific antimicrobial were included in this analysis; the final mg/PCU and nDDDvetCA/1,000 GF pig-days at risk exclude coccidiostats and pyrimethamine. Flavophospholipids was included only in the mg/PCU.

See corresponding page for footnotes.

Table 2. 11 Production, biomass and quantity of antimicrobials used in grower-finisher pigs, by province/region, 2015 to 2019 (continued)

This analysis excludes ionophore coccidiostats in feed.

mg/PCU = milligrams/population correction unit.

ESVAC = European Surveillance of Veterinary Antimicrobial Consumption.

DDDvetCA = Canadian Defined Daily Doses (average labelled dose) in milligrams per kilogram grower-finisher pig weight per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the CIPARS 2019: Design and Methods document, Table A. 2 for the list of standards.

nDDDvetCA/1,000 GF pig-days at risk = number of DDDvetCA/1,000 grower-finisher pig-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

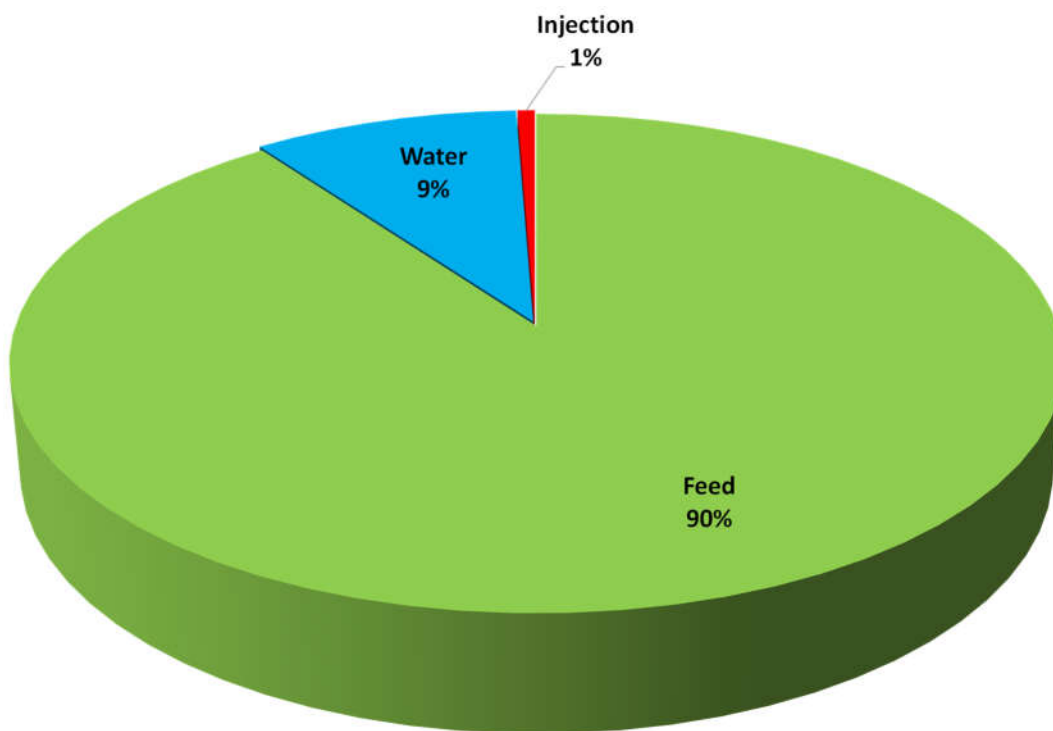

^a Population correction unit (PCU) or biomass, European weight (total herd population x ESVAC standard weight of 65 kg pig).

^b Percent change = $[(\text{current surveillance year} - \text{previous surveillance year})/\text{previous surveillance year}] \times 100$.

^c Includes only the provinces/regions surveyed and includes only the quantity of antimicrobials used in feed, excluding ionophores.

^d Includes only the provinces/regions surveyed and includes only the quantity of ionophores used in feed, excluding other antimicrobials.

Figure 2. 34 Quantity of antimicrobials, adjusted for dose (DDDvetCA/1,000 pig-days at risk), 2019

Quantitative estimates are based on milligrams of antimicrobial use, excluding ionophores.

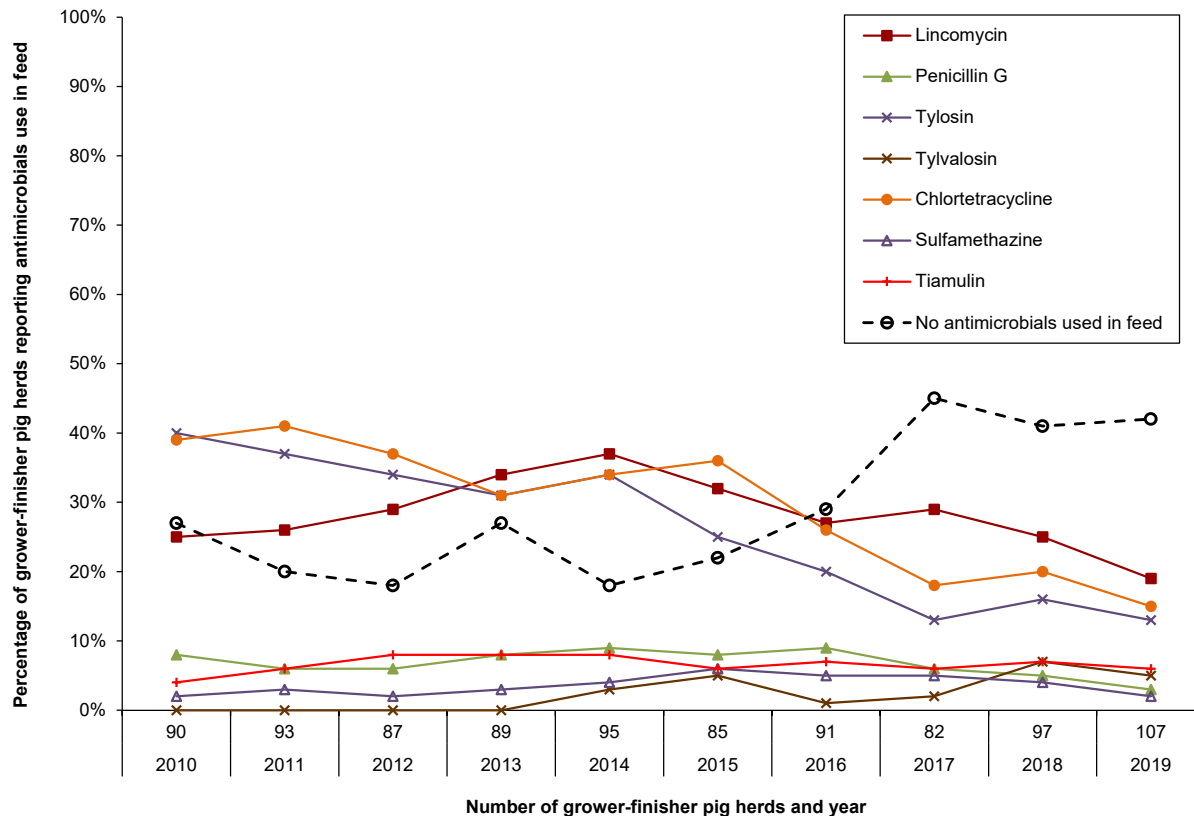

DDDvetCA = Canadian Defined Daily Doses (average labelled dose) in milligrams per kilogram grower-finisher pig weight per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the CIPARS 2019: Design and Methods document, Table A. 2 for the list of standards.

$\text{nDDDvetCA}/1,000 \text{ GF pig-days at risk} = \text{number of DDDvetCA} / 1,000 \text{ grower-finisher pig-days at risk}$.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Antimicrobial use in feed by frequency

Figure 2. 35 Percentage of grower-finisher pig herds reporting antimicrobial use in feed, 2010 to 2019

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of herds	90	93	87	89	95	85	91	82	97	107
Antimicrobial										
I Lincomycin	25%	26%	29%	34%	37%	32%	27%	29%	25%	19%
II Penicillin G	8%	6%	6%	8%	9%	8%	9%	6%	5%	3%
Tylosin	40%	37%	34%	31%	34%	25%	20%	13%	16%	13%
Tylvalosin	0%	0%	0%	0%	3%	5%	1%	2%	7%	5%
III Chlortetracycline	39%	41%	37%	31%	34%	36%	26%	18%	20%	15%
Sulfamethazine	2%	3%	2%	3%	4%	6%	5%	5%	4%	2%
UC Tiamulin	4%	6%	8%	8%	8%	6%	7%	6%	7%	6%
No antimicrobials used in feed	27%	20%	18%	27%	18%	22%	29%	45%	41%	42%

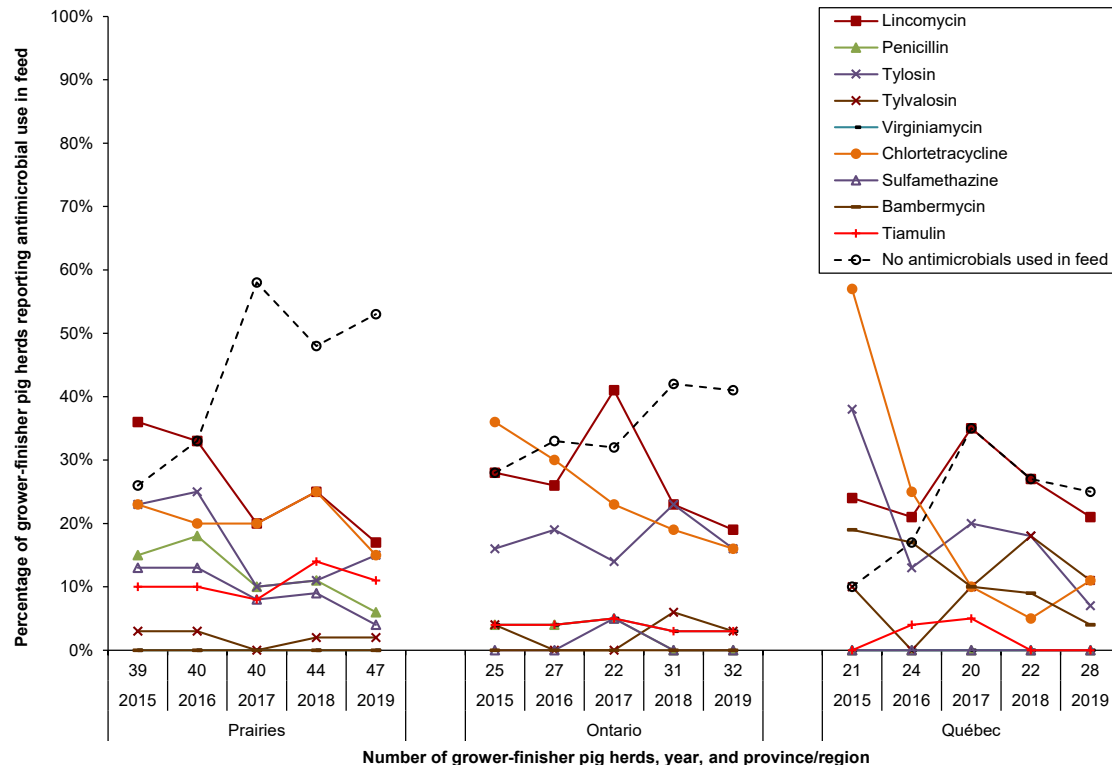

Roman numerals II to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. UC = tiamulin is a medically important but uncategorized (UC) antimicrobial.

Only antimicrobials used by 5% of herds or more in a given year within any province/region are depicted in this figure. Antimicrobial use in feed reported by fewer than 5% of herds included Category II: tilmicosin, virginiamycin; Category III: bacitracin, neomycin, oxytetracycline, spectinomycin; Category IV: bambarmycin.

For the temporal analyses, the proportion (%) of herds using a specific antimicrobial in the current year has been compared to the proportion (%) of herds using the same antimicrobial in the previous 10 years and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. UC = tiamulin is a medically important but uncategorized (UC) antimicrobial.

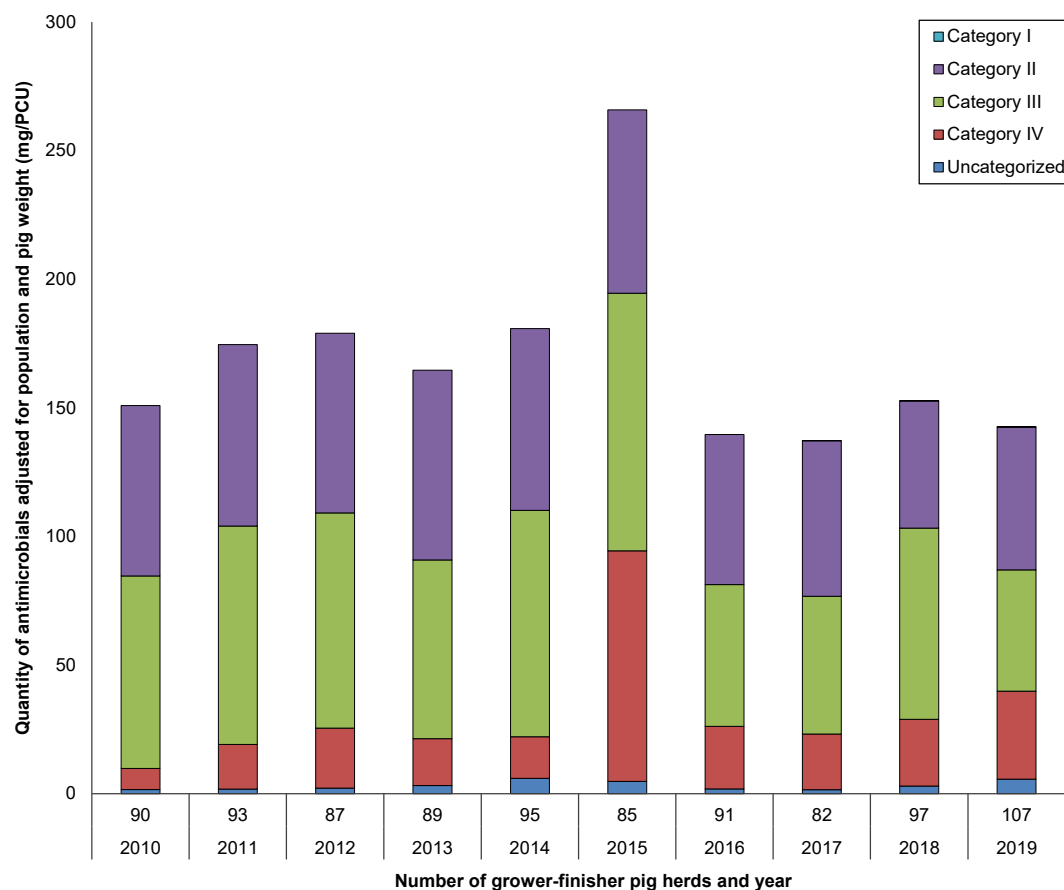

Only antimicrobials used by 5% of herds or more in a given year within any province/region are depicted in this figure. Antimicrobial use in feed reported by fewer than 5% of herds included Category II: tilmicosin; Category III: bacitracin, neomycin, oxytetracycline, and spectinomycin.

For the temporal analyses within province/region, the proportion (%) of herds using a specific antimicrobial in the current year has been compared to the proportion (%) of herds using the same antimicrobial in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province/region ($P \leq 0.05$) for a given antimicrobial. The presence of red areas indicates significant provincial/regional differences ($P \leq 0.05$) for a given antimicrobial within the current year (Québec-referent province). The presence of purple areas (2019 surveillance year; Québec-referent province) indicates significant temporal and provincial/regional differences ($P \leq 0.05$) for a given antimicrobial.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Antimicrobial use in feed by quantitative indicators

Figure 2. 37 Quantity of antimicrobial use in feed adjusted for population and pig weight (mg/PCU), by Veterinary Drugs Directorate category, 2010 to 2019

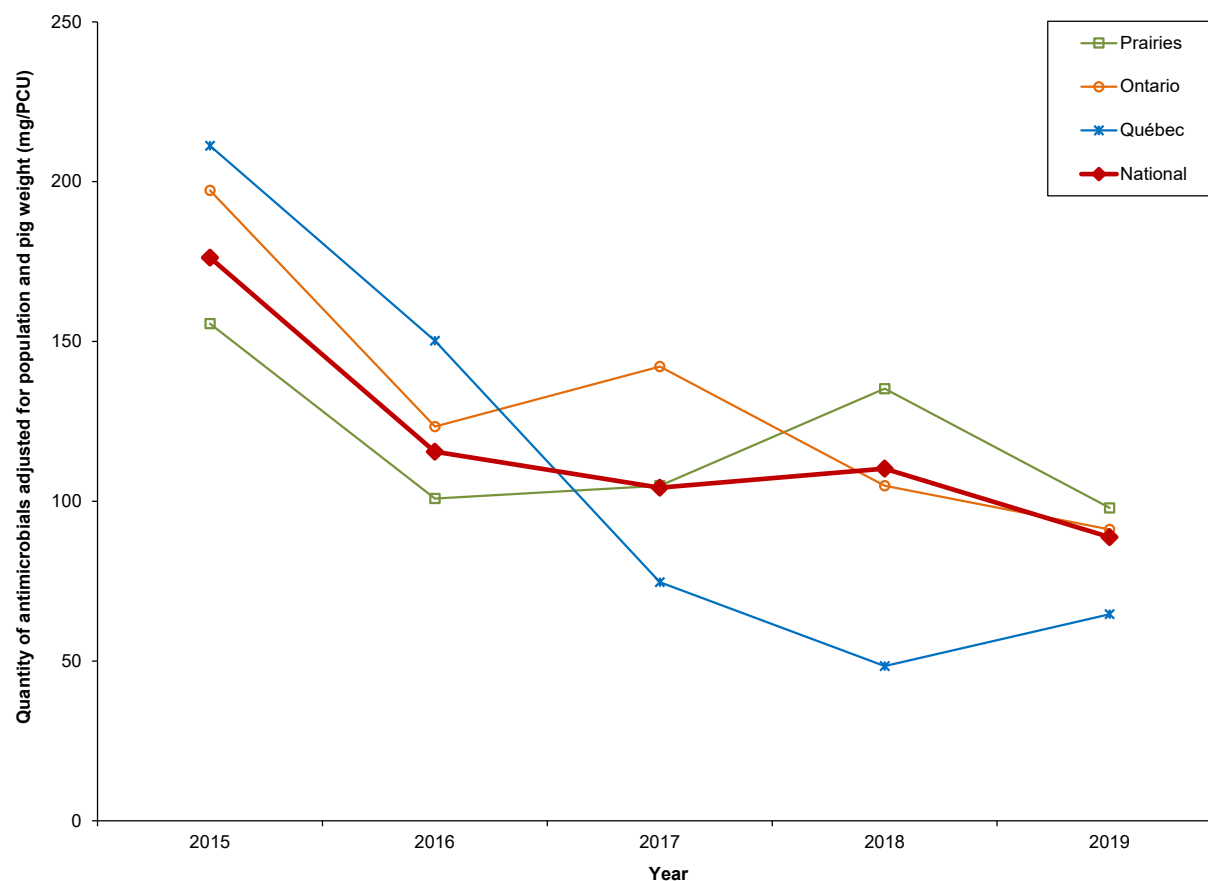

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of herds	92	93	87	89	95	85	91	82	97	107
Category I	0	0	0	0	0	0	0	<0.1	<0.1	<0.1
Category II	66	71	70	74	71	71	58	60	49	56
Category III	75	85	84	69	88	100	55	54	74	47
Category IV	8	17	23	18	16	90	24	22	26	34
UC	2	2	2	3	6	5	2	2	3	6
Total	151	175	179	165	181	266	140	137	153	143

mg/PCU = milligrams/population correction unit.

UC = uncategorized, medically important.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Figure 2. 38 Quantity of antimicrobial use in feed adjusted for population and pig weight (mg/PCU), by province/region, 2015 to 2019

Year	2015	2016	2017	2018	2019
Province/region					
Prairies	156	101	105	135	98

Roman numerals II to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. UC = tiamulin is a medically important but uncategorized (UC) antimicrobial.

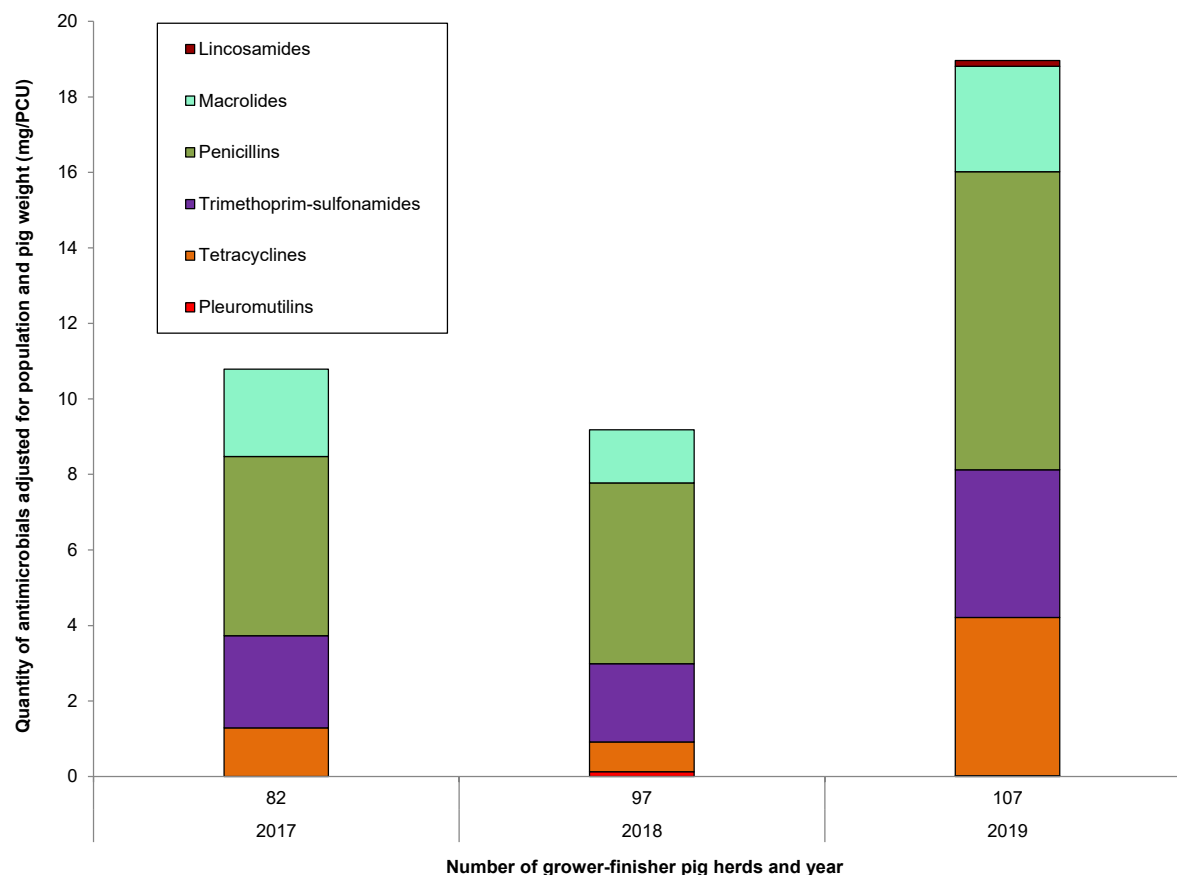

Only antimicrobials used by 5% of herds or more in a given year are depicted in this figure. Antimicrobial use in water reported by fewer than 5% of herds included Category II: neomycin; Category III: spectinomycin; and uncategorized, medically important: tiamulin.

For the temporal analyses within province/region, the proportion (%) of herds using a specific antimicrobial in the current year has been compared to the proportion (%) of herds using the same antimicrobial in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province/region ($P \leq 0.05$) for a given antimicrobial. The presence of red areas indicates significant provincial/regional differences ($P \leq 0.05$) for a given antimicrobial within the current year (Québec-referent province). The presence of purple areas (2019 surveillance year; Québec-referent province) indicates significant temporal and provincial/regional differences ($P \leq 0.05$) for a given antimicrobial.

The Prairies is a region including the provinces of Alberta, Saskatchewan and Manitoba.

Antimicrobial use in water by quantitative indicators

Figure 2. 46 Quantity of antimicrobials administered in water adjusted for population and pig weight (mg/PCU), 2017 to 2019

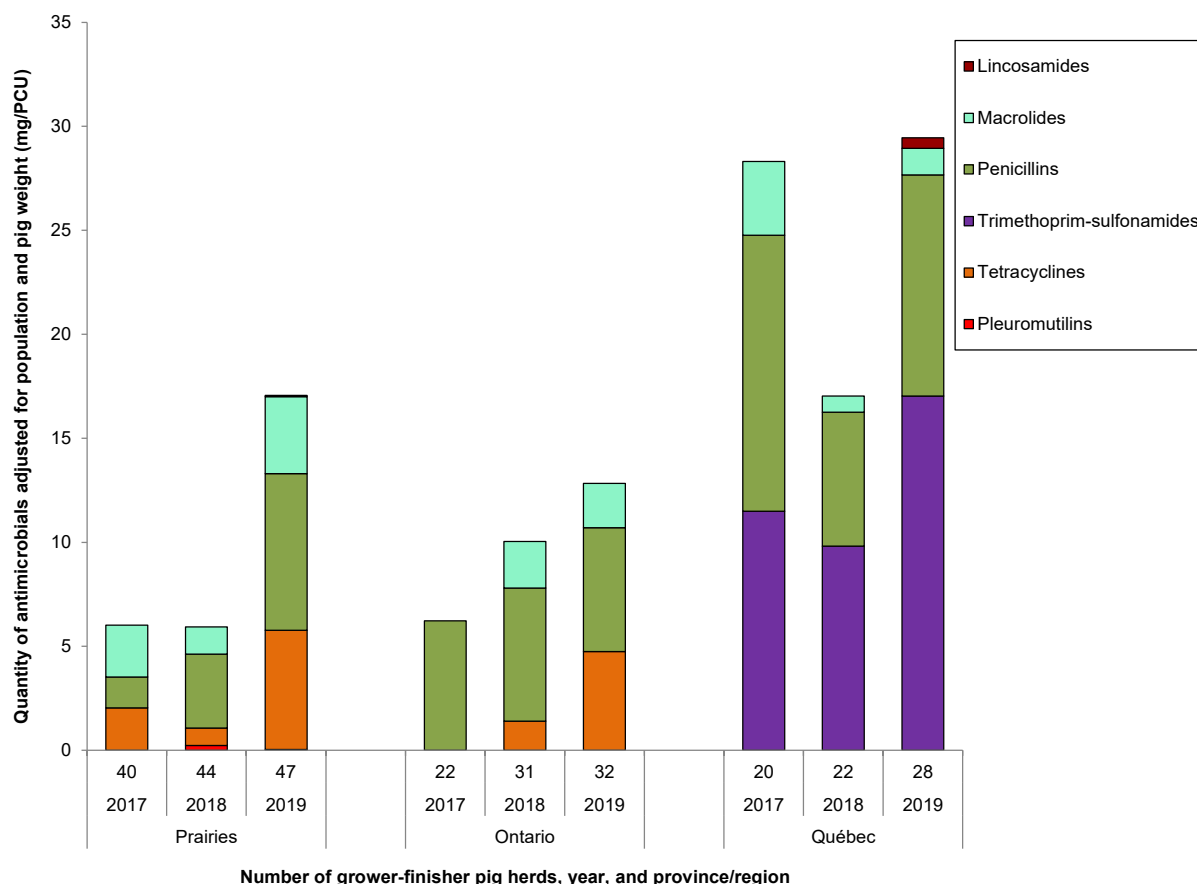

Year	2017	2018	2019
Number of herds	82	97	107
Antimicrobial class			
II Lincosamides	0.0	0.0	0.2
II Macrolides	2.3	1.4	2.8
II Penicillins	4.7	4.8	7.9
II Trimethoprim-sulfonamides	2.4	2.1	3.9
III Tetracyclines	1.3	0.8	4.2
UC Pleuromutilins	0.0	0.1	0.0
Total	10.8	9.2	19.0

Roman numerals II to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. UC = pleuromutilins are medically important but uncategorized (UC).

mg/PCU = milligrams/population correction unit.

For detailed indicator descriptions, please refer to CIPARS 2019: Design and Methods document.

Figure 2. 47 Quantity of antimicrobials administered in water adjusted for population and pig weight (mg/PCU), by province/region, 2017 to 2019

Province/region	Prairies			Ontario			Québec		
Year	2017	2018	2019	2017	2018	2019	2017	2018	2019

Roman numeral IV indicates the ranking of antimicrobials based on importance to human medicine as outlined by the Veterinary Drugs Directorate.

For the temporal analyses within province/region, the proportion (%) of herds using a specific ionophore in the current year has been compared to the proportion (%) of herds using the same antimicrobial in the previous 5 years and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province/region ($P \leq 0.05$) for a given ionophore. The presence of red areas indicates significant provincial/regional differences ($P \leq 0.05$) for a given ionophore within the current year (Québec-referent province). The presence of purple areas (2019 surveillance year; Québec-referent province) indicates significant temporal and provincial/regional differences ($P \leq 0.05$) for a given ionophore.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Antimicrobial use: Farm Surveillance in turkeys

Please contact phac.cipars-picra.aspc@phac-aspc.gc.ca for more detailed information.

Summary of antimicrobials use by all routes of administration

Table 2. 12 Number of turkey flocks with reported antimicrobial use by route of administration, 2019

Antimicrobial use	Route of administration			
	Any route ^a n (%)	<i>In ovo</i> /subcutaneous n (%)	Feed n (%)	Water n (%)
Any antimicrobial use	65 (66)	1(1)	64 (65)	12 (12)
No antimicrobial use ^b	33 (34)	97 (99)	34 (35)	86 (88)
Total flocks	98 (100)	98 (100)	98 (100)	98 (100)

^a Flocks with reported use of an antimicrobial class by feed, water, *in ovo*/subcutaneous, or any combination of these routes are included in each count.

^b These were flocks that were not medicated with any of the antimicrobials listed in Table 2. 15 (next page).

Table 2. 13 Frequency and quantity of antimicrobial use in turkeys, 2019

Route of administration	Antimicrobial	Flocks n (%)	Ration n (%)	Days exposed median (min. ; max.) ^a	Level of drug median (min. ; max.) ^b	Quantity of antimicrobial active ingredient	
						mg/PCU	nDDDvetCA/ 1,000 turkey-days at risk
Feed					g/tonne

Table 2. 15 Frequency and quantity of antimicrobial use in turkeys, 2019 (continued)

Roman numerals I to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification available at the time of writing of this report).

AMU = antimicrobial use.

Combination antimicrobials include the values for both antimicrobial components.

Grey shaded cells = no data or calculations/values are not applicable for turkeys.

mg/PCU = milligrams/population correction unit.

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligrams per kilogram turkey per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the CIPARS 2019: Design and Methods document, Table A. 1 for the list of standards.

nDDDvetCA/1,000 turkey-days at risk = number of DDDvetCA/1,000 turkey-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

^a Days exposed are by flock or full grow-out period (all rations combined) or 1 course of water treatment.

^b Level of drug is in grams/tonne of feed or grams/liter drinking water. In poults or hatching eggs, level of drug is in milligrams per poult or hatching egg, as reported by the veterinarian/producer.

^c For water medications, the total milligrams per bird administered throughout the course of treatment is reported above; estimation methods changed where total products used by the flock was reported instead of grams per liter of drinking water (2013 to 2018 methods).

^d The final mg/PCU and nDDDvetCA/1,000 turkey-days at risk exclude coccidiostats. Flavophospholipids was included only in the mg/PCU.

Table 2. 14 Production, biomass and quantity of antimicrobials used, by province, 2015 to 2019

Province	Year	Number of flocks	Pre-harvest weight Mean (kg)	Age sampled Mean (days)	Active ingredient (mg)	Turkey weights ^a (kg)	mg/PCU		nDDDvetCA/1,000 turkey-days at risk	
							Total	% change ^b	Total	% change ^b

	2018	25	11	90	33,445,259	873,834	38	18	70	17
	2019	27	11	89	36,646,907	985,654	37	-3	58	-18
National ^c	2016	72	10	90	218,578,376	3,629,571	60		97	
	2017	74	10	89	209,527,898	3,578,812	59	-3	103	7
	2018	95	10	87	211,044,621	3,958,461	53	-9	107	3
	2019	98	10	89	374,181,091	4,467,840	84	57	95	-11

Some values presented in this report slightly differ from the previous year's reports due to flock size corrections, improvement to the database and methodology refinements.

mg/PCU = milligrams/population correction unit.

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligrams per kilogram turkey per day (mg_{drug}/kg_{animal}/day); please refer to the CIPARS 2019: Design and Methods document, Table A. 1 for the list of standards.

nDDDvetCA/1,000 turkey-days at risk = number of DDDvetCA/1,000 turkey-days at risk.

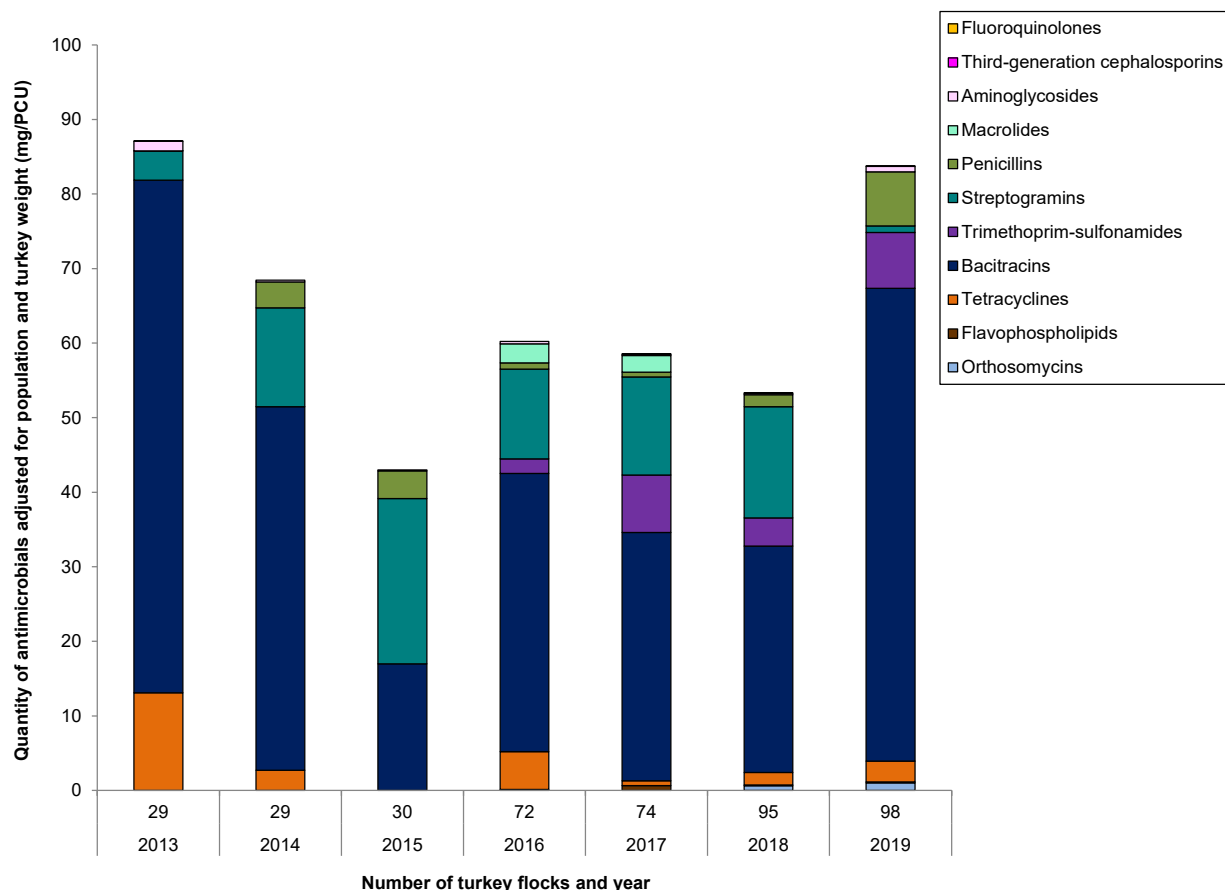

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

^a Population correction unit (PCU) or biomass, European weight (total flock population x ESVAC standard weight of 6.5 kg bird).

^b Percent change = [(current surveillance year – previous surveillance year)/previous surveillance year] x 100.

^c Includes only the provinces/regions surveyed and combines the quantity of antimicrobials used in feed, water and injection excluding coccidiostats, antiprotozoals, arsenicals and flavophospholipids.

Figure 2. 58 Quantity of antimicrobial use in all routes of administration, adjusted for population and turkey weight (mg/PCU), 2013 to 2019

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	29	29	30	72	74	95	98
Antimicrobial class							
I Fluoroquinolones	0	0	0	0	< 0.1	< 0.1	0.1
I Third-generation cephalosporins	< 0.1	0	0	0	0	0	0
Aminoglycosides	1	0.3	0.1	0.3	0.2	0.2	1

IV Flavophospholipids	0	0	0	0.1	0.7	0.1	0.2
N/A Orthosomycins	0	0	0	0	0	1	1
Total	87	68	43	60	59	53	84

Roman numerals I to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

N/A = not applicable (no classification available at the time of writing of this report).

mg/PCU = milligrams/population correction unit.

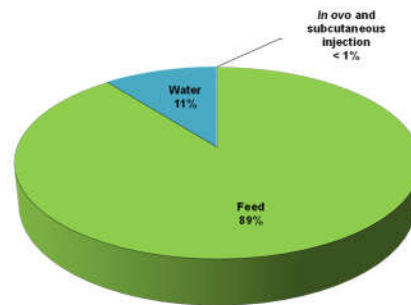

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

2013 to 2015 data pertains to British Columbia.

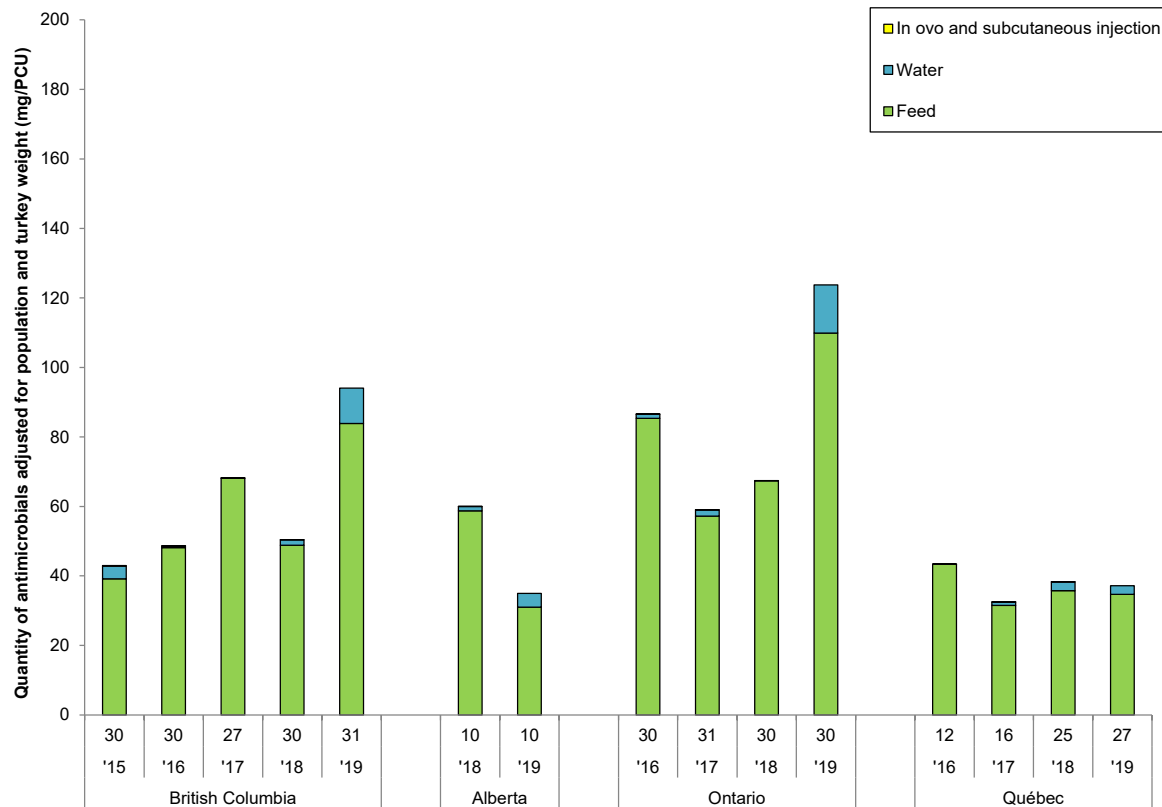

Please note, estimates have slightly varied from previous reports due to correction on the dose or level of drugs, days at risk, and birds at risk. One Alberta flock was misclassified as a British Columbia flock in 2018.

Figure 2. 59 Quantity of antimicrobials, adjusted for population and turkey weight (mg/PCU), in 2019 and by province, 2015 to 2019

a) 2019

b) by province

Number of turkey flocks, year and province

IV Bambermycin	0%	0%	0%	4%	16%	4%	5%
N/A Avilamycin	0%	0%	0%	0%	0%	3%	7%
No antimicrobials used in feed	24%	10%	17%	17%	20%	36%	35%

Roman numerals II to IV indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate. N/A = not applicable (no classification at the time of writing of this report).

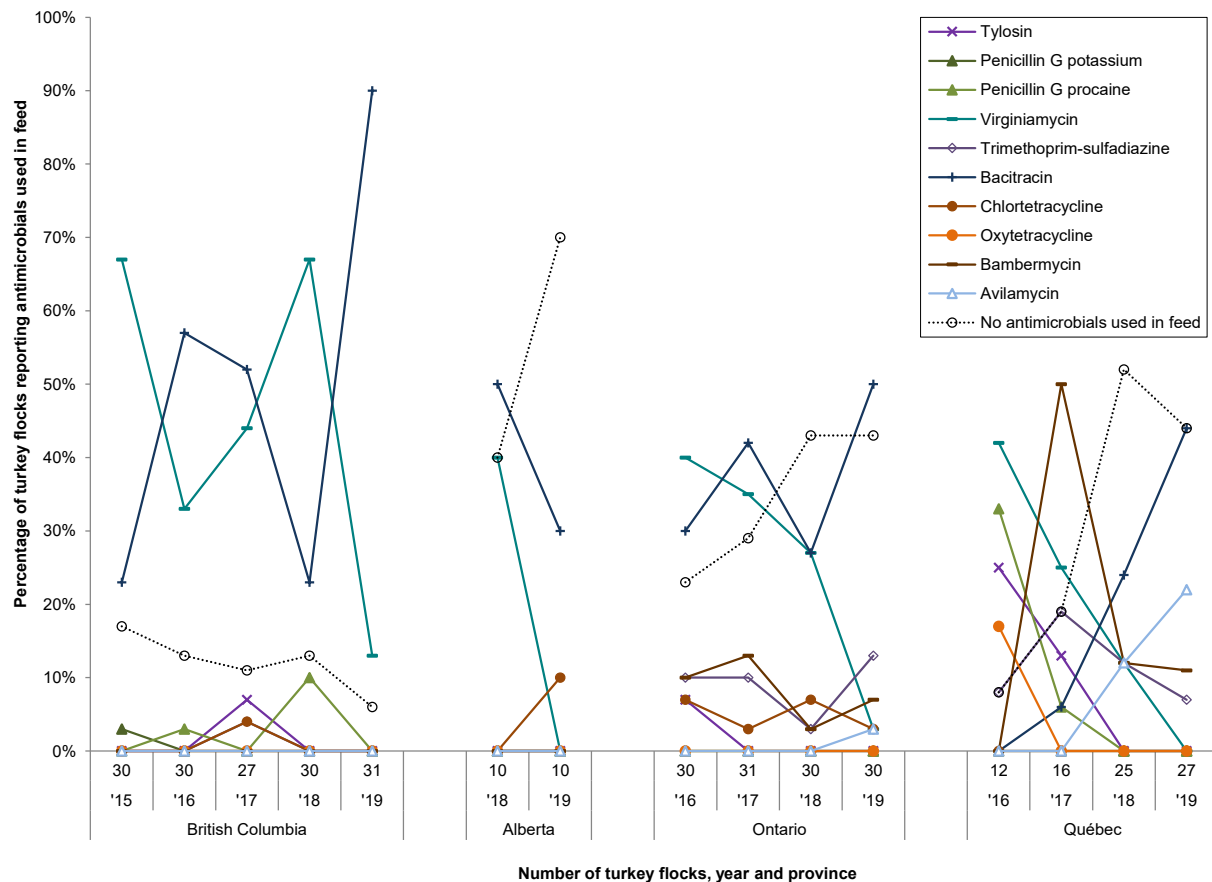

Numbers per column may not add up to 100% as some flocks may have used an antimicrobial more than once or used multiple antimicrobials throughout the grow-out period.

For the temporal analyses, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in 2016 (program started at the national level) and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

Please note that the "no antimicrobials used in feed" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories II to IV and avilamycin).

2013 to 2015 data pertains to British Columbia.

Figure 2. 63 Percentage of turkey flocks reporting antimicrobial use in feed, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec

Roman numerals I to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

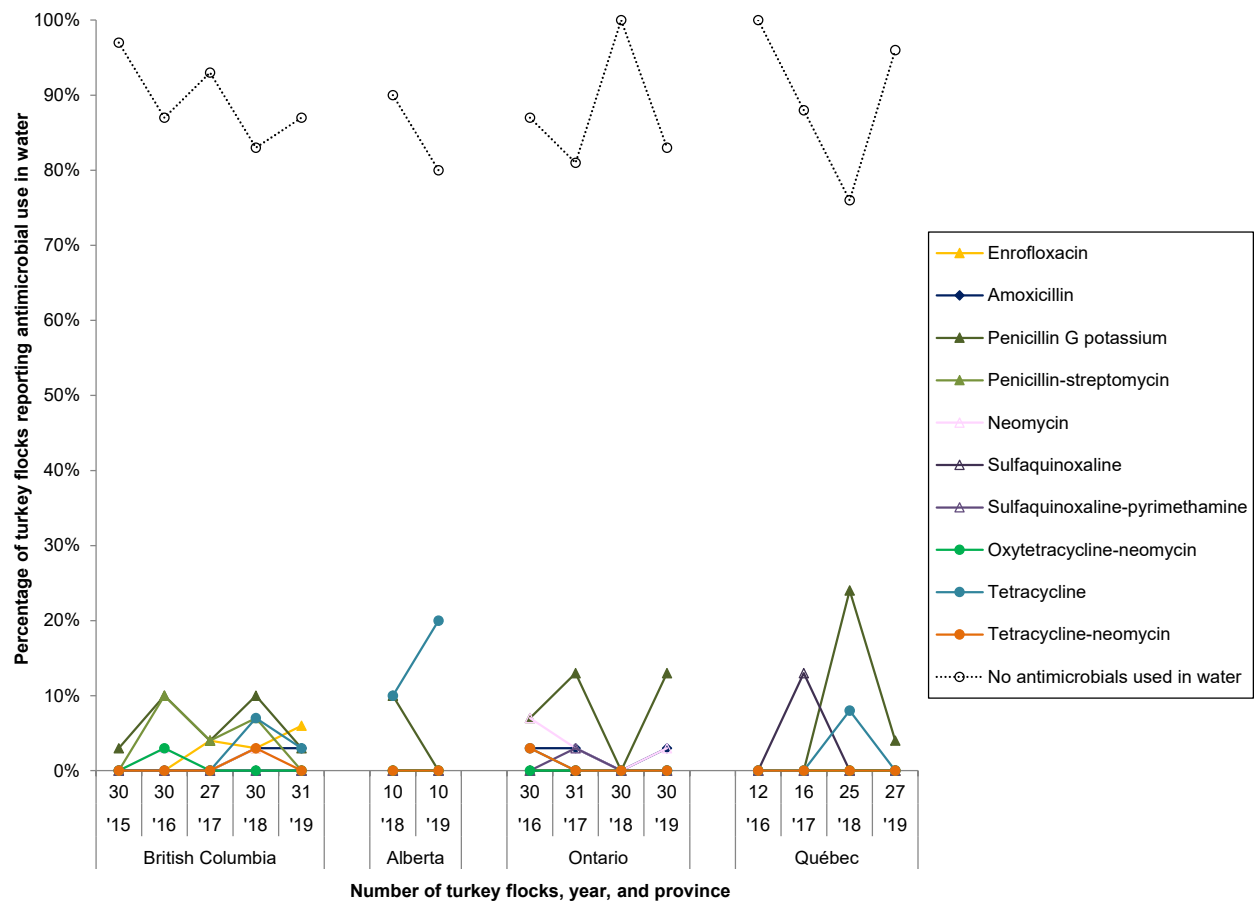

Numbers per column may not add up to 100% as some flocks have used an antimicrobial more than once or used multiple antimicrobials throughout the growing period.

For the temporal analysis, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in 2016 (program started at the national level) and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

Please note that the "no antimicrobials used in water" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories I to III).

2013 to 2015 data pertains to British Columbia.

Figure 2. 67 Percentage of turkey flocks reporting antimicrobial use in water, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	12	16	25	27
Antimicrobial															
I Enrofloxacin	0%	0%	4%	3%	6%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Amoxicillin	0%	0%	0%	3%	3%	0%	0%	3%	3%	0%	3%	0%	0%	0%	0%
Penicillin G potassium	3%	10%	4%	10%	3%	10%	0%	7%	13%	0%	13%	0%	0%	24%	4%
Penicillin-streptomycin	0%	10%	4%	7%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Neomycin	0%	3%	0%	3%	0%	0%	0%	7%	3%	0%	3%	0%	0%	0%	0%
Sulfaquinoxaline	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	13%	0%	0%
Sulfaquinoxaline-pyrimethamine	0%	0%	0%	0%	0%	0%	0%	0%	3%	0%	0%	0%	0%	0%	0%
III Oxytetracycline-neomycin	0%	3%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Tetracycline	0%	0%	0%	7%	3%	10%	20%	3%	0%	0%	0%	0%	0%	8%	0%
Tetracycline-neomycin	0%	0%	0%	3%	0%	0%	0%	3%	0%	0%	0%	0%	0%	0%	0%
No antimicrobials used in water	97%	87%	93%	83%	87%	90%	80%	87%	81%	100%	83%	100%	88%	76%	96%

Roman numerals I to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

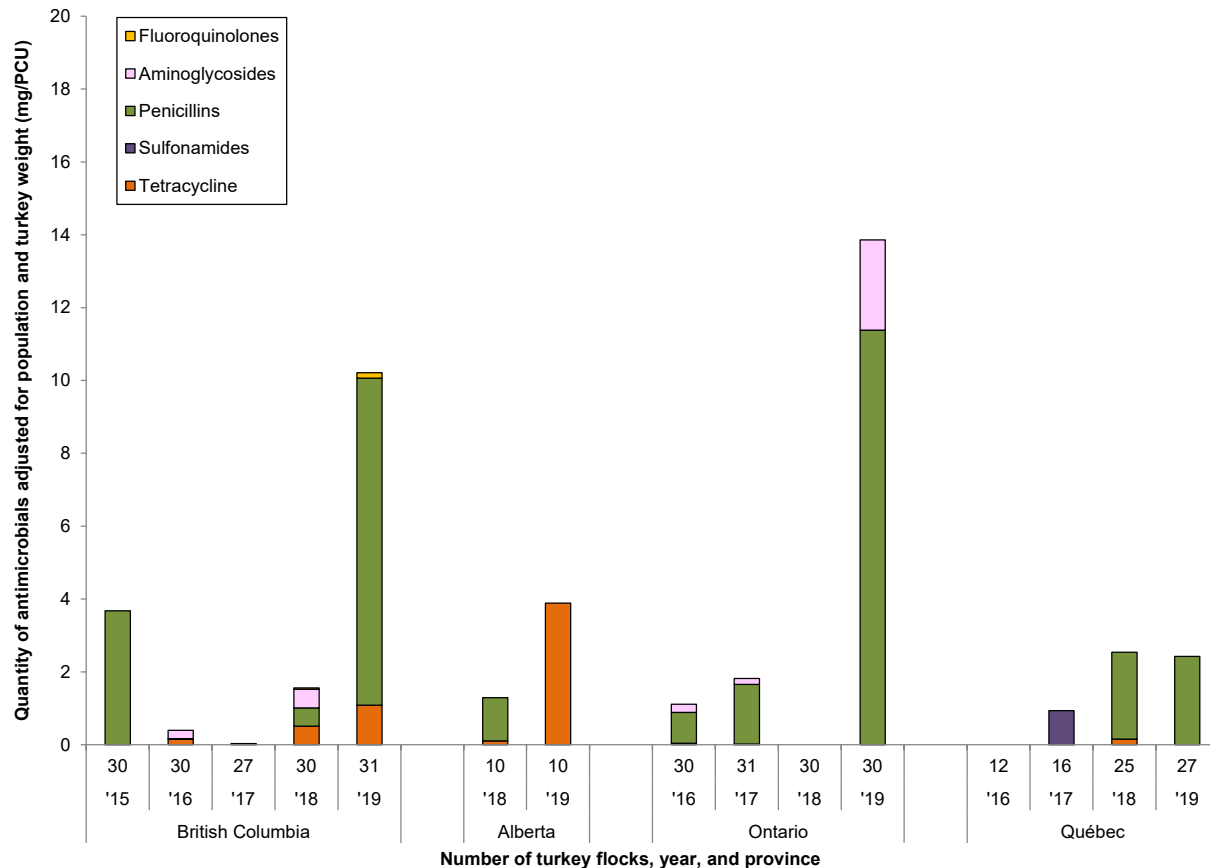

Numbers per column may not add up to 100% as some flocks have used an antimicrobial more than once or used multiple antimicrobials throughout the growing period.

For the temporal analysis within province, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in 2016 (program started at the national level) and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) within province for a given antimicrobial. The presence of red areas indicates significant provincial differences ($P \leq 0.05$) for a given antimicrobial within the current year (Québec-referent province).

Please note that the "no antimicrobials used in water" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories I to III).

Antimicrobial use in water by quantitative indicators

Figure 2. 68 Quantity of antimicrobial use in water adjusted for population and turkey weight (mg/PCU), by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	12	16	25	27
Antimicrobial class															
I Fluoroquinolones	0	0	< 0.1	< 0.1	0.2	0	0	0	0	0	0	0	0	0	0
II Aminoglycosides	0	0.2	0	1	0	0	0	0.2	0.2	0	2	0	0	0	0
II Penicillins	4	0	0	1	9	1	0	1	2	0	11	0	0	2	2
III Sulfonamides	0	0	0	0	0	0	0	0	0	0	0	0	1	0	0
III Tetracyclines	0	0.2	0	1	1	0.1	4	0	0	0	0	0	0	0	0
Total	4	0.4	0	2	10	1	4	1	2	0	14	0	1	3	2

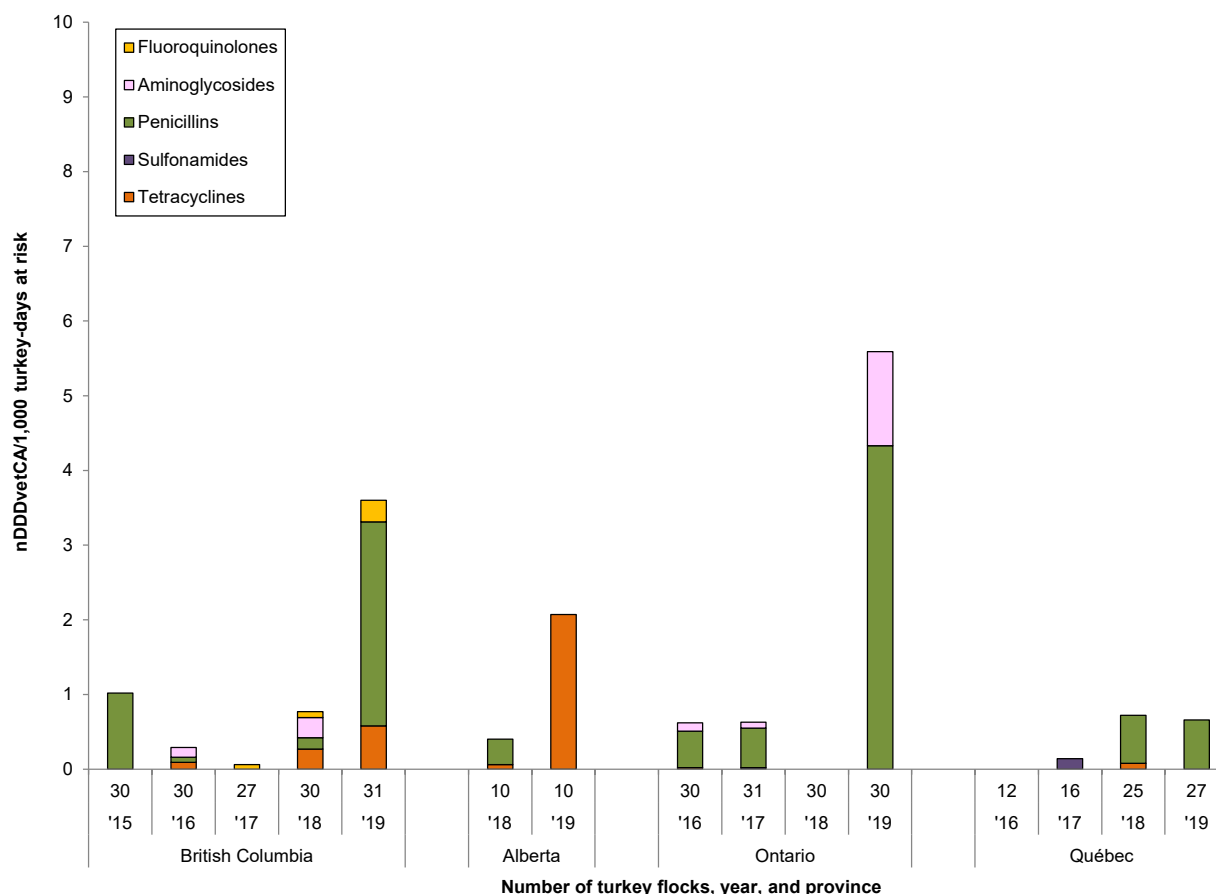

Roman numerals I to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

mg/PCU = milligrams/population correction unit

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Please note, estimates have slightly changed from previous reports as a result of ongoing refinements to the database, flock population, dose corrections, and rounding.

Figure 2. 69 Number of Canadian Defined Daily Doses for animals per 1,000 turkey-days at risk (nDDDvetCA/1,000 turkey-days at risk) for antimicrobials administered in water, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	12	16	25	27
Antimicrobial class															
I Fluoroquinolones	0	0	0.1	0.1	0.3	0	0	0	0	0	0	0	0	0	0
II Aminoglycosides	0	0.1	0	0.3	0	0	0	0.1	0.1	0	1	0	0	0	0
II Penicillins	1	0.1	0	0.2	2.7	0.3	0	0.5	0.5	0	4	0	0	1	0.7
III Sulfonamides	0	0	0	0	0	0	0	0	< 0.1	0	0	0	0.1	0	0
III Tetracyclines	0	0.1	0	0.3	1	0.1	2	< 0.1	0	0	0	0	0	0.1	0
Total	1.0	0.3	0.1	0.8	3.6	0.4	2.1	0.6	0.6	0	6	0	0.1	0.7	0.7

Roman numerals I to III indicate categories of importance to human medicine as outlined by the Veterinary Drugs Directorate.

DDDvetCA = Canadian Defined Daily Doses for animals (average labelled dose) in milligram per kilogram turkey weight per day ($\text{mg}_{\text{drug}}/\text{kg}_{\text{animal}}/\text{day}$); please refer to the 2019 CIPARS Design and Methods document, Table A. 1 for the list of standards.

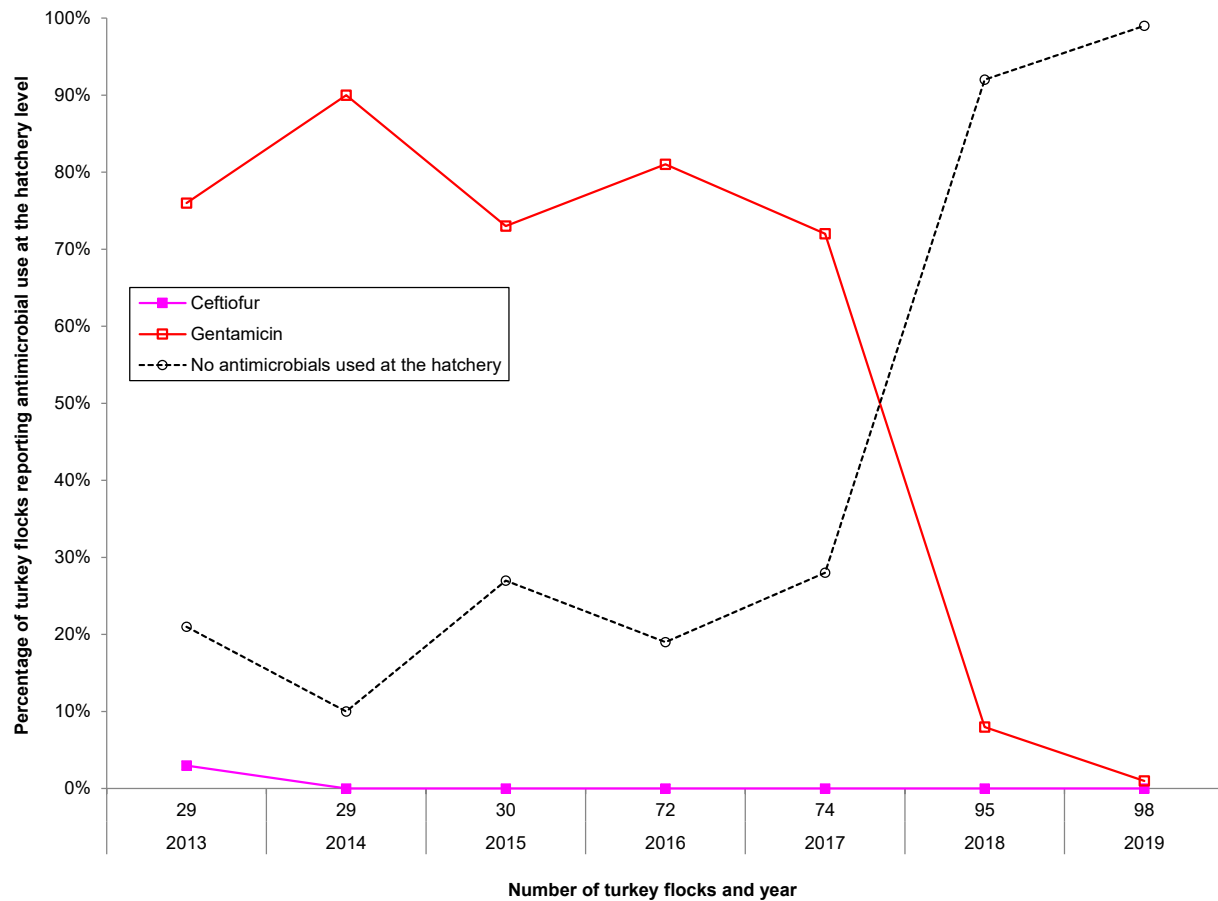

nDDDvetCA/1,000 turkey-days at risk = number of DDDvetCA/1,000 turkey-days at risk.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Please note, estimates have slightly changed from previous reports as a result of ongoing refinements to the database, flock population (flocks with no pre-harvest data excluded), dose corrections, and rounding.

Antimicrobials use *in ovo* or subcutaneous injection by frequency

Figure 2. 70 Percentage of turkey flocks reporting antimicrobial use *in ovo* or subcutaneous injection, 2013 to 2019

Year	2013	2014	2015	2016	2017	2018	2019
Number of flocks	29	29	30	72	74	95	98
Antimicrobial							
I Ceftiofur	3%	0%	0%	0%	0%	0%	0%
II Gentamicin	76%	90%	73%	81%	72%	8%	1%
No antimicrobials used at the hatchery	21%	10%	27%	19%	28%	92%	99%

Roman numerals I and II indicates category of importance to human medicine as outlined by the Veterinary Drugs Directorate.

Numbers per column may not add up to 100% due to rounding or batches of chicks (hatched at the same time to supply 1 barn) may have used more than one antimicrobial.

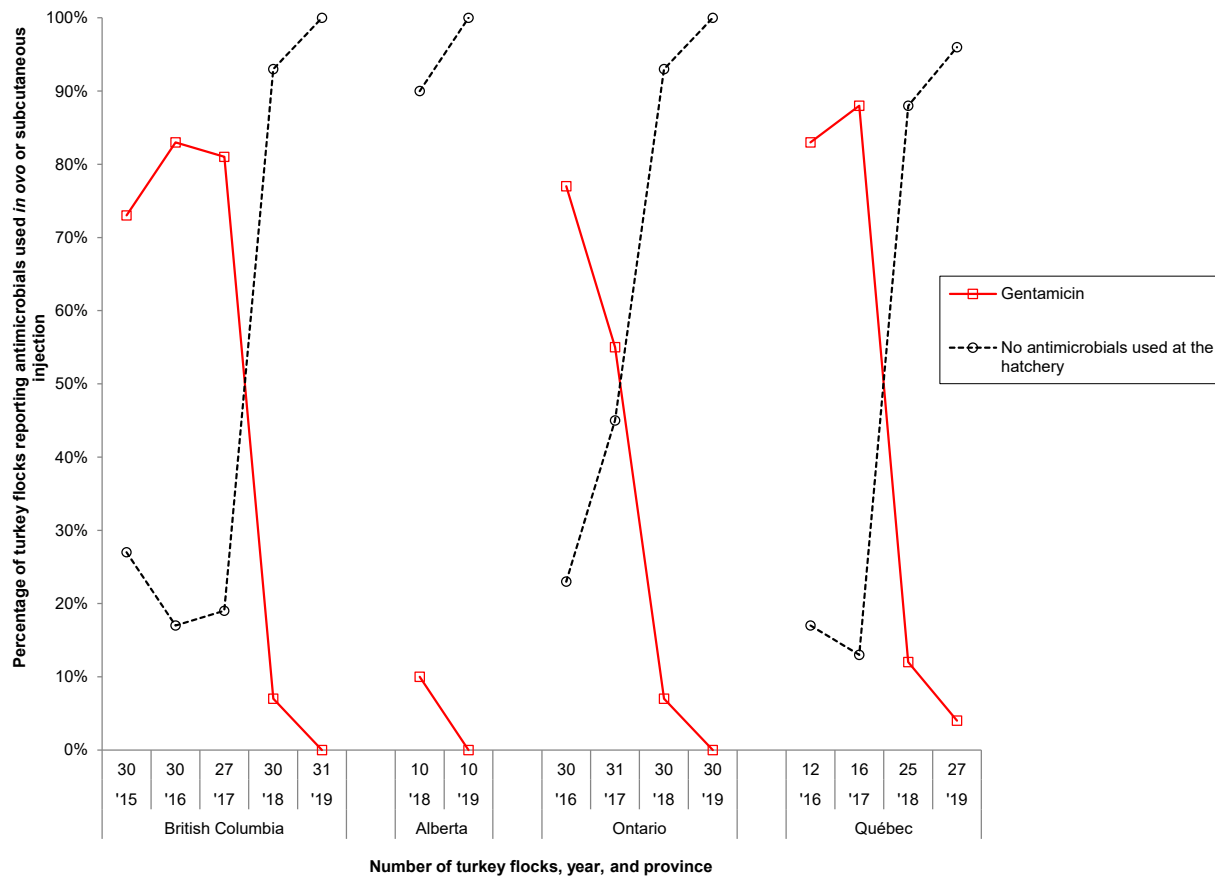

Data represent flocks medicated at the hatchery at day 18 of incubation or upon hatch.

For the temporal analyses, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in 2016 (national program started) and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) for a given antimicrobial.

Please note that the "no antimicrobials used" pertains to flocks that did not use any of the antimicrobial classes included in this figure (Categories I and II).

2013 to 2015 data pertains to British Columbia.

Figure 2. 71 Percentage of turkey flocks reporting antimicrobial use *in ovo* or subcutaneous injection, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19
Number of flocks	30	30	27	30	31	10	10	30	31	30	30	12	16	25	27
Antimicrobial															
II Gentamicin	73%	83%	81%	7%	0%	10%	0%	77%	55%	7%	0%	83%	88%	12%	4%
No antimicrobials used at the hatchery	27%	17%	19%	93%	100%	90%	100%	23%	45%	93%	100%	17%	13%	88%	96%

Roman numerals II indicates category of importance to human medicine as outlined by the Veterinary Drugs Directorate.

Numbers per column may not add up to 100% due to rounding or batches of chicks (hatched at the same time to supply 1 barn) may have used more than one antimicrobial.

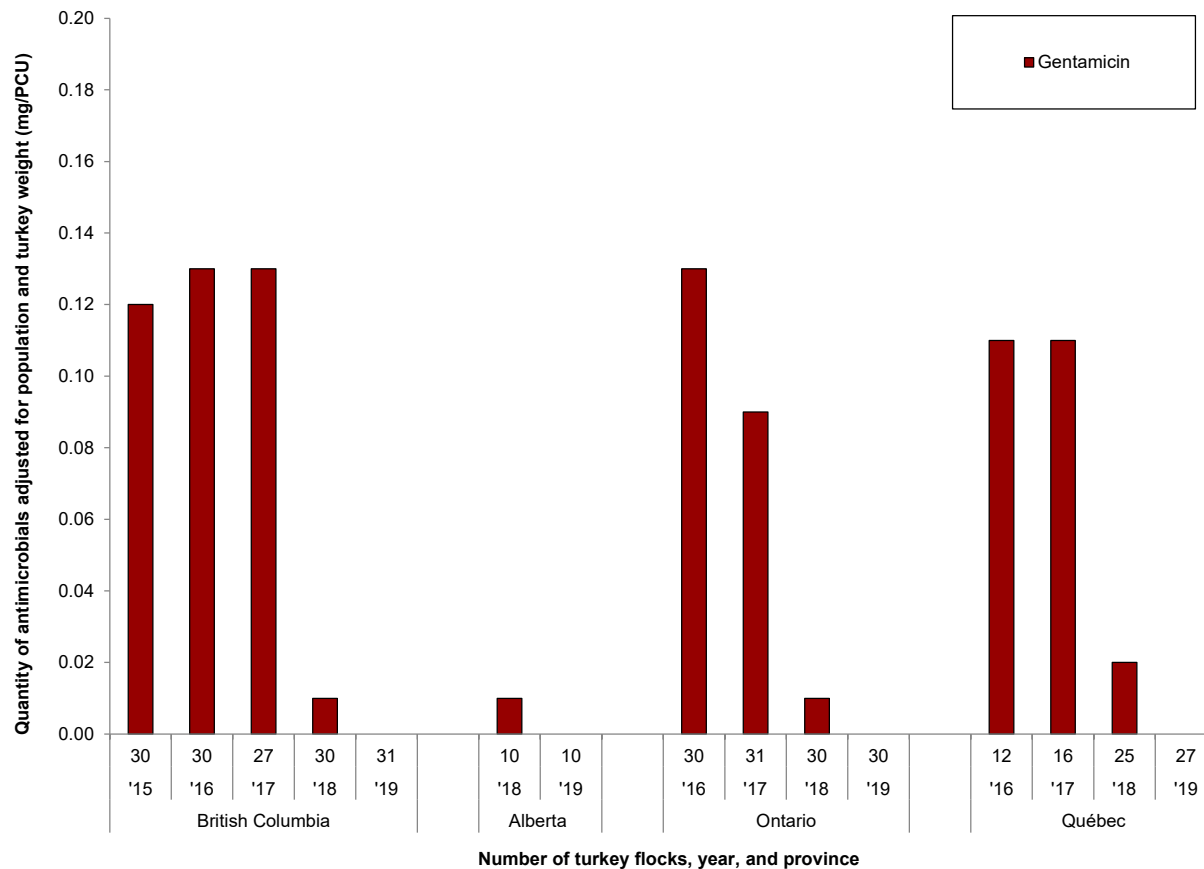

Data represent flocks medicated at the hatchery at day 18 of incubation or upon hatch.

For the temporal analyses within province, the proportion (%) of flocks using a specific antimicrobial in the current year has been compared to the proportion (%) of flocks using the same antimicrobial in 2016 (national program started) and previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences ($P \leq 0.05$) within province for a given antimicrobial. The presence of red areas indicates significant provincial differences ($P \leq 0.05$) for a given antimicrobial within the current year (Québec-referent province).

Please note that the "no antimicrobials used at the hatchery" pertains to flocks that did not use the antimicrobial class included in this figure (Categories II).

Antimicrobial use *in ovo* or subcutaneous injection by quantitative indicators

Figure 2. 72 Quantity of antimicrobial use *in ovo* or subcutaneous injection adjusted for population and turkey weight (mg/PCU), by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19

Roman numeral II indicates category of importance to human medicine as outlined by the Veterinary Drugs Directorate.

Total milligrams active ingredient was calculated using the final dose (in milligrams per hatching egg or poult) suggested by the manufacturer and expert opinion based on milligrams per body weight or residue avoidance information: gentamicin routine dose (1 mg/poult).

mg/PCU = milligrams/population correction unit.

For detailed indicator descriptions, please refer to the CIPARS 2019: Design and Methods document.

Figure 2. 73 Number of Canadian Defined Daily Doses for animals per 1,000 turkey-days at risk (nDDDvetCA/1,000 turkey-days at risk) for antimicrobials administered *in ovo* or subcutaneous injection, by province, 2015 to 2019

Province	British Columbia					Alberta		Ontario				Québec			
Year	'15	'16	'17	'18	'19	'18	'19	'16	'17	'18	'19	'16	'17	'18	'19

N/A = not applicable (no classification at the time of writing of this report).

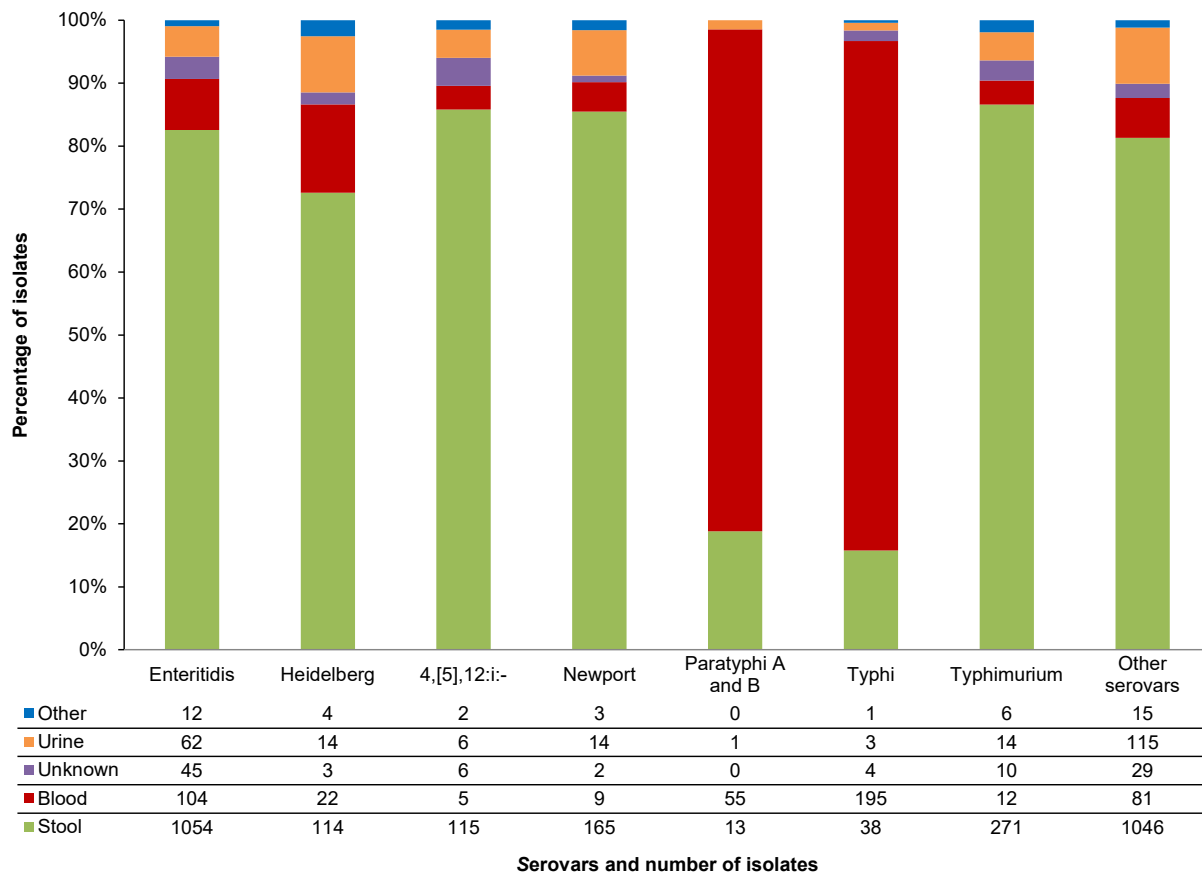

For the temporal analyses within province, the proportion (%) of flocks using a specific chemical coccidiostat in the current year has been compared to the proportion (%) of flocks using the same chemical coccidiostat in 2016 (national program started) and the previous surveillance year (grey areas). The presence of blue areas indicates significant temporal differences within province ($P \leq 0.05$) for a given chemical coccidiostat. The presence of red areas indicates significant provincial differences ($P \leq 0.05$) for a given chemical coccidiostat within the current year (Québec-referent province).

Chapter 3 Antimicrobial resistance

Human Surveillance

Serovar distribution

Figure 3. 1 Proportion of human *Salmonella* serovars from all sample sources, 2019

Salmonella Paratyphi B does not include *S. Paratyphi* B var. L (+) tartrate (+), formerly called *S. Paratyphi* var. Java. The biotype of *S. Paratyphi* B included here is tartrate (-) and associated with severe typhoid-like fever. *Salmonella* Paratyphi B var. L (+) tartrate (+) is commonly associated with gastrointestinal illness.

Multiclass resistance

Table 3. 1 Number of antimicrobial classes in resistance patterns of *Salmonella* serovars from humans, 2019

Province or region/serovar	Number (%) of isolates	Number of isolates resistant by antimicrobial class and antimicrobial

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Salmonella Paratyphi B does not include *S. Paratyphi* B var. L (+) tartrate (+), formerly called *S. Paratyphi* var. Java. The biotype of *S. Paratyphi* B included here is tartrate (-) and associated with severe typhoid-like fever.

Salmonella Paratyphi B var. L (+) tartrate (+) is commonly associated with gastrointestinal illness.

Antimicrobial abbreviations are defined in the Appendix.

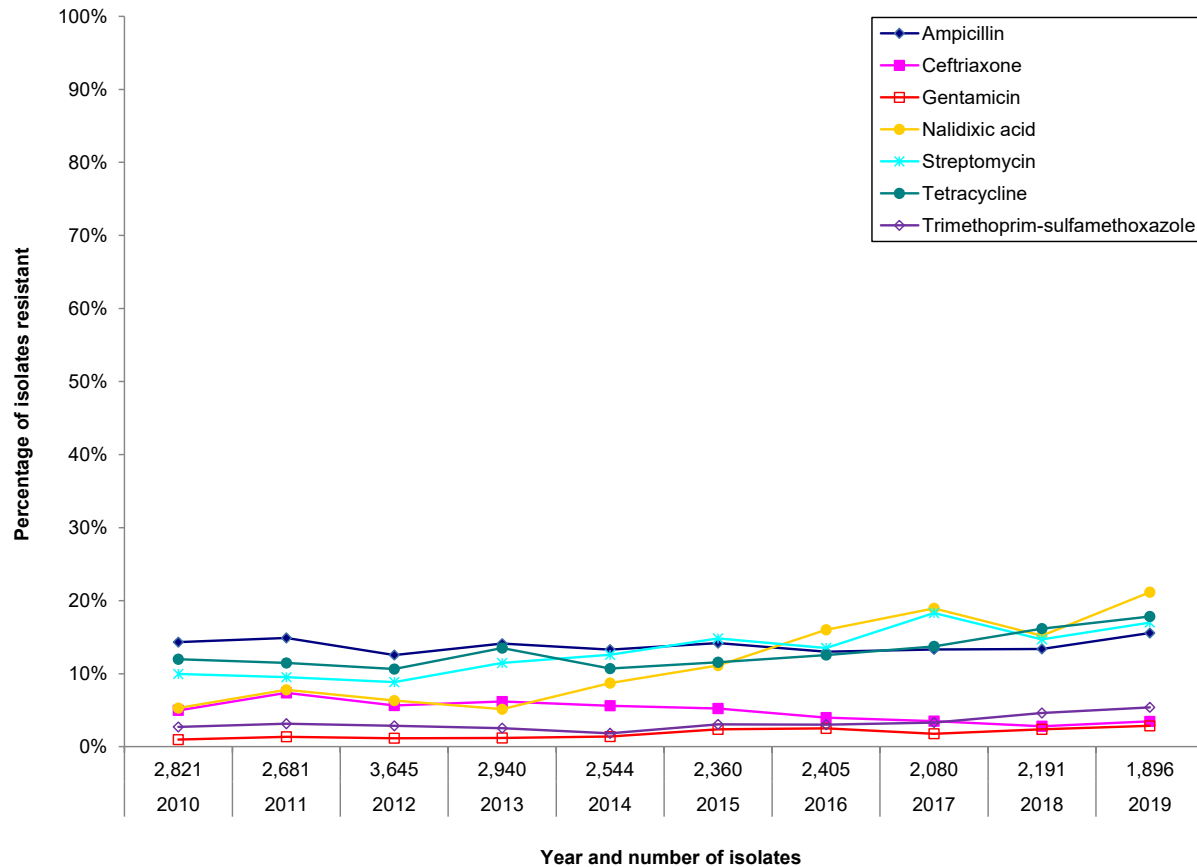

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Salmonella Paratyphi B does not include *S. Paratyphi* B var. L (+) tartrate (+), formerly called *S. Paratyphi* var. Java. The biotype of *S. Paratyphi* B included here is tartrate (-) and associated with severe typhoid-like fever.

Salmonella Paratyphi B var. L (+) tartrate (+) is commonly associated with gastrointestinal illness.

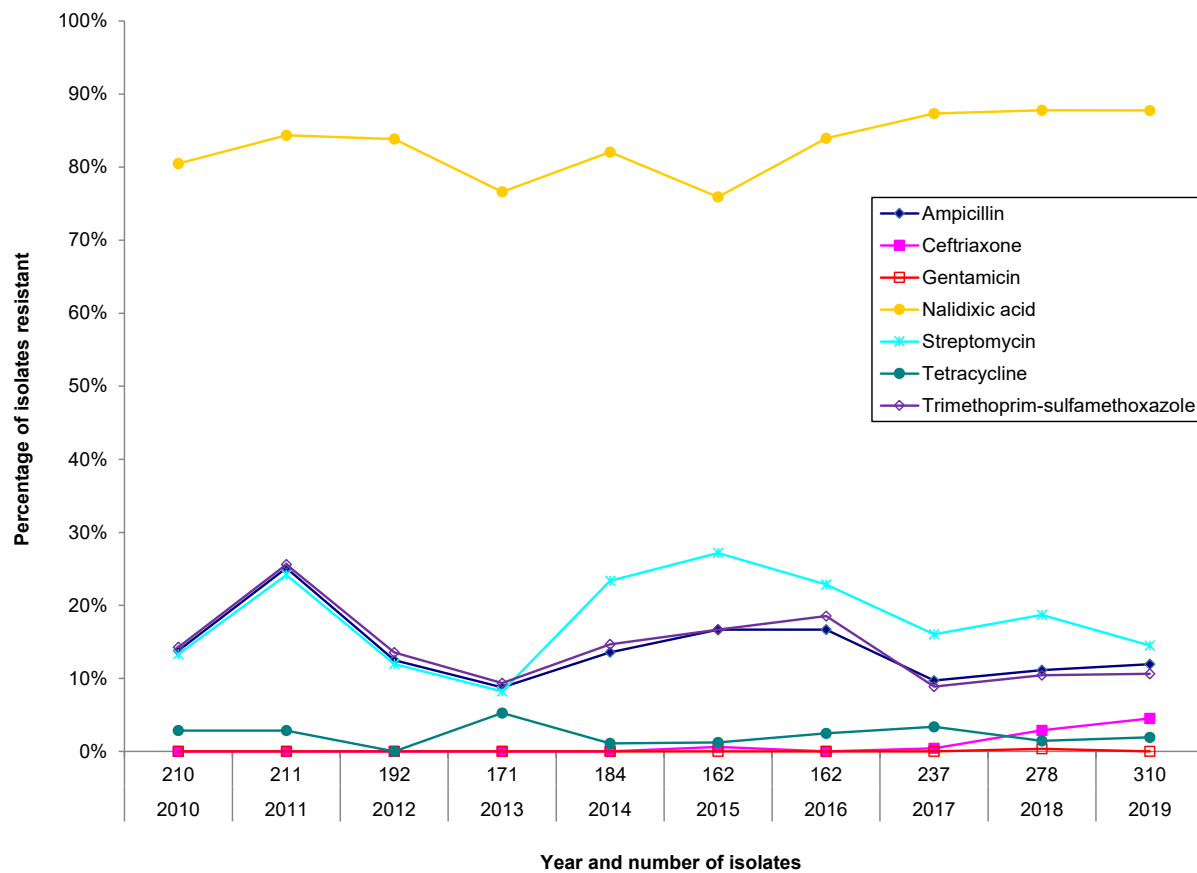

Temporal antimicrobial resistance summary

Figure 3. 2 Temporal variations in resistance of non-typhoidal *Salmonella* from humans, 2010 to 2019

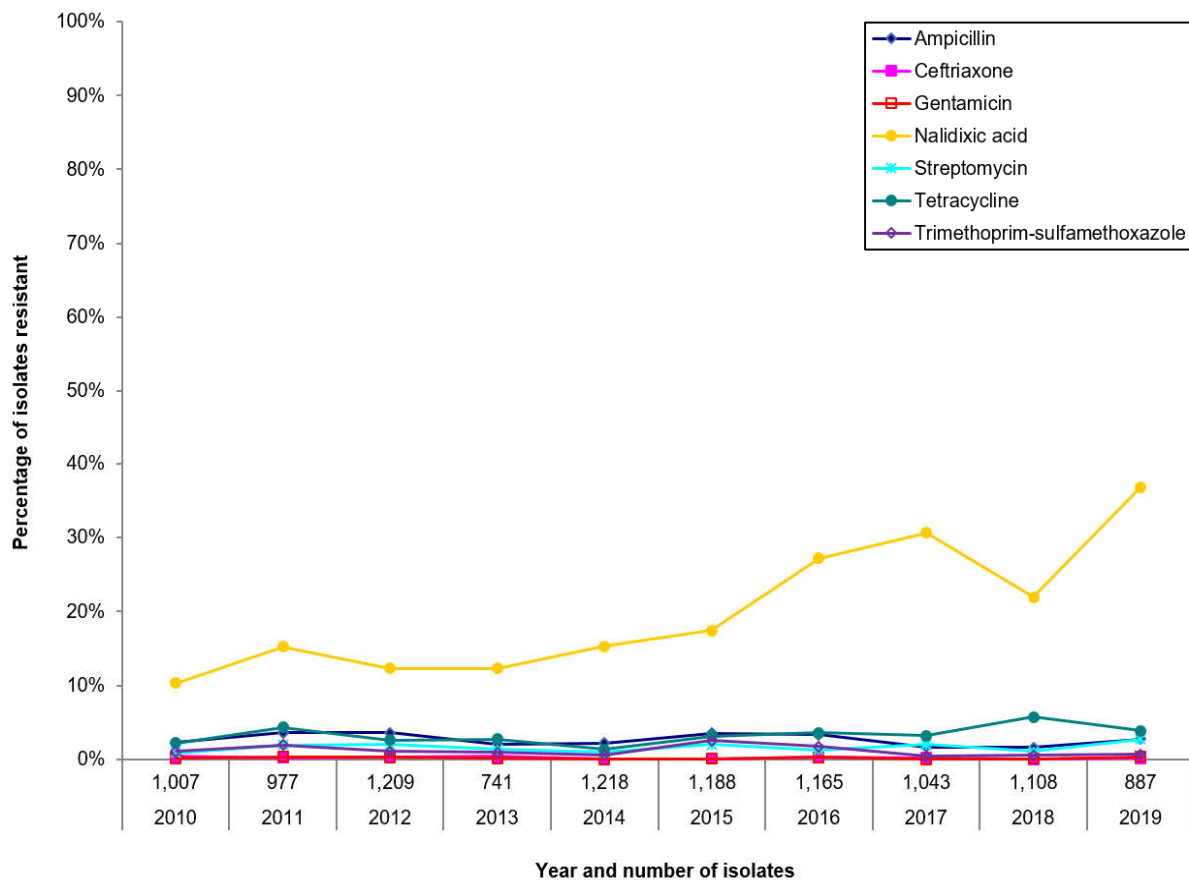

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	2,821	2,681	3,645	2,940	2,544	2,360	2,405	2,080	2,191	1,896
Antimicrobial										
Ampicillin	14%	15%	13%	14%	13%	14%	13%	13%	13%	16%
Ceftriaxone	5%	7%	6%	6%	6%	5%	4%	4%	3%	3%
Gentamicin	1%	1%	1%	1%	1%	2%	2%	2%	2%	3%
Nalidixic acid	5%	8%	6%	5%	9%	11%	16%	19%	15%	21%
Streptomycin	10%	10%	9%	11%	13%	15%	14%	18%	15%	17%
Tetracycline	12%	11%	11%	14%	11%	12%	13%	14%	16%	18%
Trimethoprim-sulfamethoxazole	3%	3%	3%	3%	2%	3%	3%	3%	5%	5%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 3 Temporal variations in resistance of typhoidal *Salmonella* from humans, 2010 to 2019

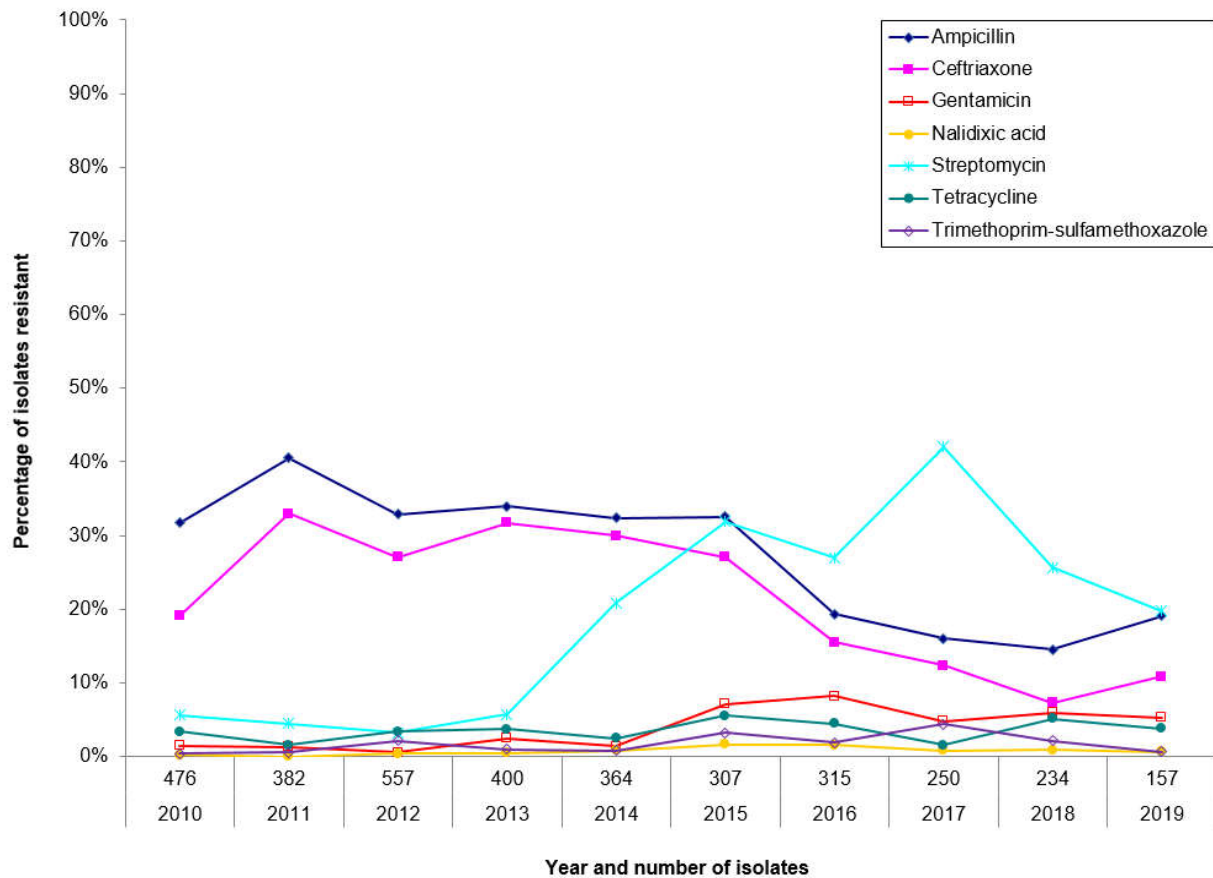

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	210	211	192	171	184	162	162	237	278	310
Antimicrobial										
Ampicillin	14%	25%	13%	9%	14%	17%	17%	10%	11%	12%
Ceftriaxone	0%	0%	0%	0%	0%	1%	0%	0%	3%	5%
Gentamicin	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Nalidixic acid	80%	84%	84%	77%	82%	76%	84%	87%	88%	88%
Streptomycin	13%	24%	12%	8%	23%	27%	23%	16%	19%	15%
Tetracycline	3%	3%	0%	5%	1%	1%	2%	3%	1%	2%
Trimethoprim-sulfamethoxazole	14%	26%	14%	9%	15%	17%	19%	9%	10%	11%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 4 Temporal variations in resistance of *Salmonella* Enteritidis from humans, 2010 to 2019

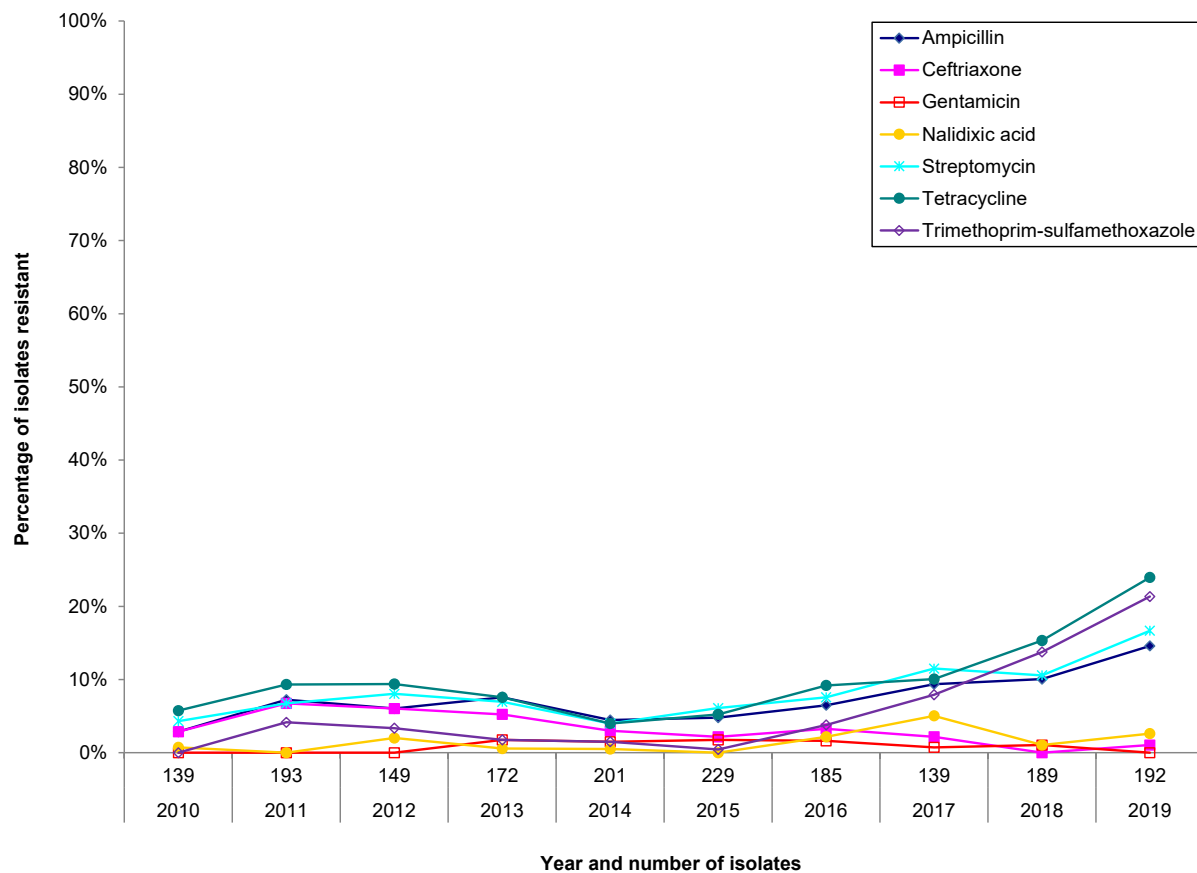

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	1,007	977	1,209	741	1,218	1,188	1,165	1,043	1,108	887
Antimicrobial										
Ampicillin	2%	4%	4%	2%	2%	4%	3%	2%	2%	3%
Ceftriaxone	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Gentamicin	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Nalidixic acid	10%	15%	12%	12%	15%	17%	27%	31%	22%	37%
Streptomycin	1%	2%	2%	1%	1%	2%	1%	2%	1%	3%
Tetracycline	2%	4%	3%	3%	1%	3%	4%	3%	6%	4%
Trimethoprim-sulfamethoxazole	1%	2%	1%	1%	1%	3%	2%	0%	1%	1%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 5 Temporal variations in resistance of *Salmonella* Heidelberg from humans, 2010 to 2019

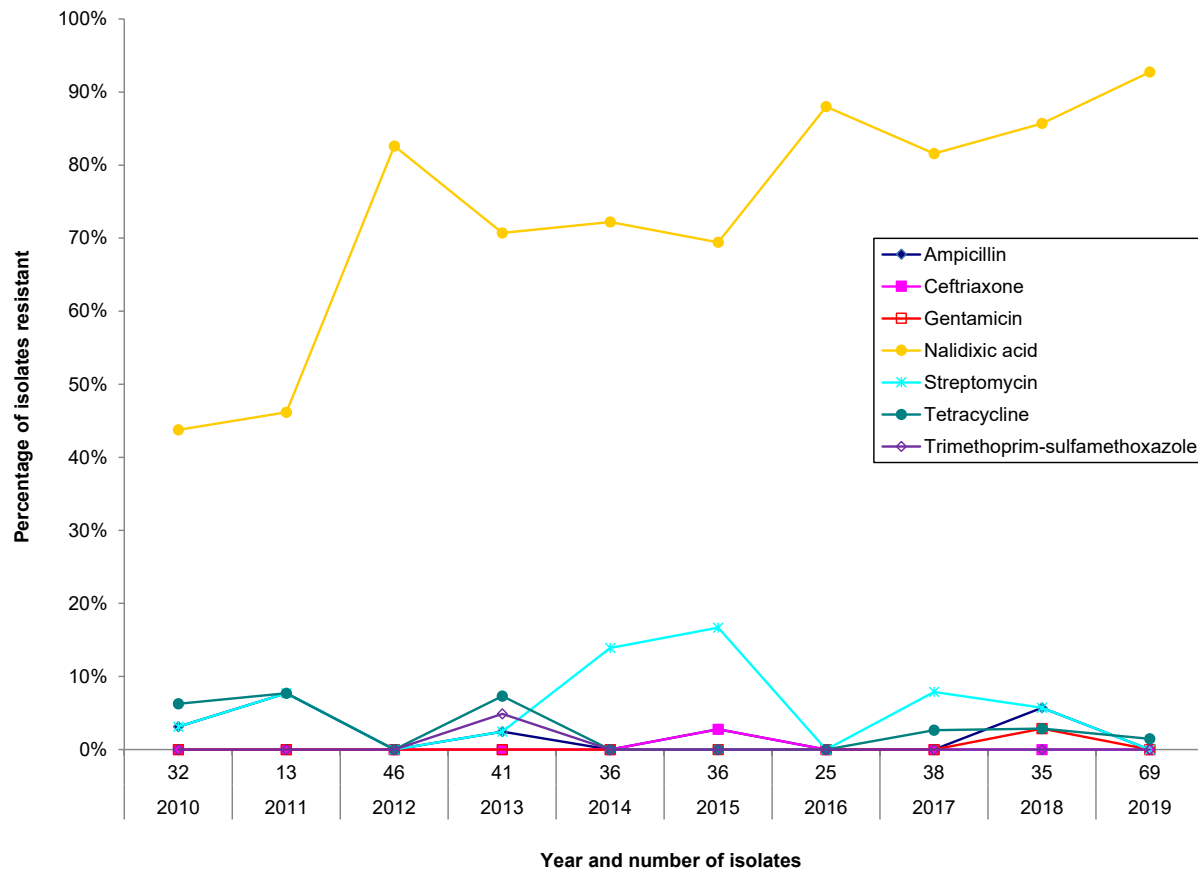

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2018
Number of isolates	476	382	557	400	364	307	315	250	234	157
Antimicrobial										
Ampicillin	32%	41%	33%	34%	32%	33%	19%	16%	15%	19%

Ontario	1 (0.7)		1																	1
Québec	72 (49.3)	55	10	3	4			4	2					6	2		3		1	17
National	146 (100)	116	17	7	6			10	4					9	2		4	1	2	28

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

For Ontario and the Prairies in 2019, a partial year of retail sampling was conducted due to difficulties in staffing field personnel. As a result, the sampling target and subsequent isolate yields were not achieved and results should be interpreted with caution.

Table 3. 3 Number of antimicrobial classes in resistance patterns of *Salmonella* from chicken, 2019

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Serovars represented by less than 2% of isolates were classified as "Less common serovars".

The Prairies is a region including the provinces of Alberta and Saskatchewan.

For Ontario and the Prairies in 2019, a partial year of retail sampling was conducted due to difficulties in staffing field personnel. As a result, the sampling target and subsequent isolate yields were not achieved and results should be interpreted with caution.

For the temporal analyses within province/region, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 5 years and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given province/region and antimicrobial.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

For Ontario and the Prairies in 2018 and 2019, a partial year of retail sampling was conducted due to difficulties in staffing field personnel. As a result, the sampling target and subsequent isolate yields were not achieved and results should be interpreted with caution. For this reason, data only appear in the table and have been omitted in the figure.

For the temporal analyses within province/region, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 5 years and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given province/region and antimicrobial.

The Prairies is a region including the provinces of Alberta and Saskatchewan.

For Ontario and the Prairies in 2018 and 2019, a partial year of retail sampling was conducted due to difficulties in staffing field personnel. As a result, the sampling target and subsequent isolate yields were not achieved and results should be interpreted with caution. For this reason, data only appear in the table and have been omitted in the figure.

Table 3. 9 Retail Meat Surveillance recovery rates, 2003 to 2019 (continued)

Grey-shaded areas indicate either: a) isolates recovered from sampling activities outside the scope of CIPARS routine (or “core”) surveillance in the specified year (i.e., grey-shaded areas with data) or b) discontinuation or no surveillance activity (i.e., grey-shaded areas with no data).

The Prairies is a region including the provinces of Alberta and Saskatchewan.

For Ontario and the Prairies in 2018 and 2019, a partial year of retail sampling was conducted due to difficulties in staffing field personnel. As a result, the sampling target and subsequent isolate yields were not achieved and results should be interpreted with caution.

The Atlantic region includes New Brunswick, Nova Scotia, and Prince Edward Island.

^a In 2011, due to an unforeseeable pause in retail sampling in Saskatchewan of approximately 3 months, the expected number of samples was not met and thus, results for the Prairies for this year should be interpreted with caution.

^b Enhancement to the *Salmonella* recovery method yielded higher recovery rates from retail chicken in 2007 than in prior years.

^c For the Atlantic region, recovery results are not presented for *Campylobacter* in 2007 and 2008 as well as for *Enterococcus* in 2007, 2008, and 2009 due to concerns regarding harmonization of laboratory methods.

^d Due to an unforeseeable pause in retail sampling in the Atlantic region from April through December in 2012, the expected number of samples was not achieved and thus, results for this region in 2012 are not representative and potentially lack the precision necessary to be included as regular surveillance data. For this reason, these data are not presented anywhere else in this chapter.

^e No retail sampling was conducted in the Atlantic region from 2015 to 2019.

Abattoir Surveillance

Multiclass resistance

Table 3. 10 Number of antimicrobial classes in resistance patterns of *Escherichia coli* from beef cattle, 2019

Animal species	Number of isolates	Number of isolates by number of antimicrobial classes in the resistance pattern						Number of isolates resistant by antimicrobial class and antimicrobial														
								Aminoglycosides		β-Lactams					Folate pathway inhibitors		Macrolides	Phenicol	Quinolones		Tetracyclines	
		0	1	2-3	4-5	6-7		GEN	STR	AMP	AMC	CRO	FOX	MEM	SSS	SXT	AZM	CHL	CIP	NAL	TET	
Beef Cattle	119	67	37	13	2			14							19			3			43	

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Table 3. 11 Number of antimicrobial classes in resistance patterns of *Campylobacter* from beef cattle, 2019

Species	Number (%) of isolates	Number of isolates by number of antimicrobial classes in the resistance pattern					Number of isolates resistant by antimicrobial class and antimicrobial							
							Aminoglycosides	Lincosamides	Macrolides	Phenicol	Quinolones	Tetracyclines		
		0	1	2-3	4-5	6-7	GEN	CLI	AZM	ERY	FLR	CIP	NAL	TET
<i>Campylobacter jejuni</i>	71 (68.9)	31	30	10					1	1		11	11	39
<i>Campylobacter coli</i>	25 (24.3)	4	10	9	2			7	7	7		7	7	17
<i>Campylobacter</i> spp.	7 (6.8)	6	1									3	7	1
Total	103 (100)	35	46	20	2			7	8	8		21	25	57

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Campylobacter spp. include unidentified species, some of which may be intrinsically resistant to nalidixic acid.

Table 3. 12 Number of antimicrobial classes in resistance patterns of *Salmonella* from chickens, 2019

Serovar	Number (%) of isolates	Number of isolates by number of antimicrobial classes in the resistance pattern					Number of isolates resistant by antimicrobial class and antimicrobial													
							Aminoglycosides		β-Lactams					Folate pathway inhibitors		Macrolides	Phenicol	Quinolones		Tetracyclines
		0	1	2–3	4–5	6–7	GEN	STR	AMP	AMC	CRO	FOX	MEM	SSS	SXT	AZM	CHL	CIP	NAL	TET

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Campylobacter spp. include unidentified species, some of which may be intrinsically resistant to nalidixic acid.

Temporal antimicrobial resistance summary

Figure 3. 18 Temporal variations in resistance of *Escherichia coli* isolates from beef cattle, 2010 to 2019

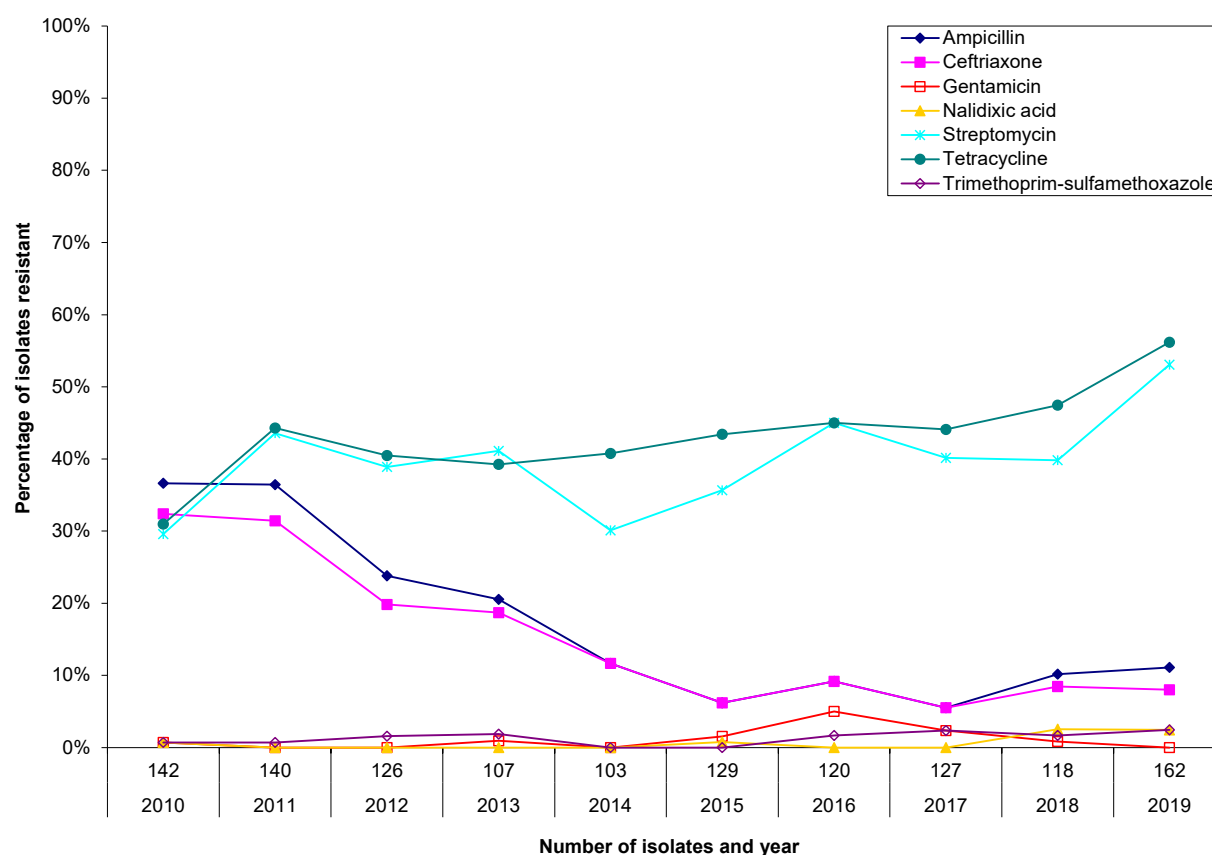

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	77	139	165	64	141	149	133	148	125	119
Antimicrobial										
Ampicillin	1%	1%	1%	6%	5%	3%	3%	5%	4%	0%
Ceftriaxone	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Gentamicin	0%	1%	1%	2%	0%	0%	0%	0%	0%	0%
Nalidixic acid	0%	0%	1%	3%	1%	0%	3%	1%	1%	0%
Streptomycin	5%	7%	7%	11%	13%	12%	18%	17%	17%	12%
Tetracycline	14%	28%	27%	27%	31%	34%	36%	34%	34%	36%
Trimethoprim-sulfamethoxazole	0%	0%	0%	5%	3%	0%	0%	1%	1%	0%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years, 5 years, and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

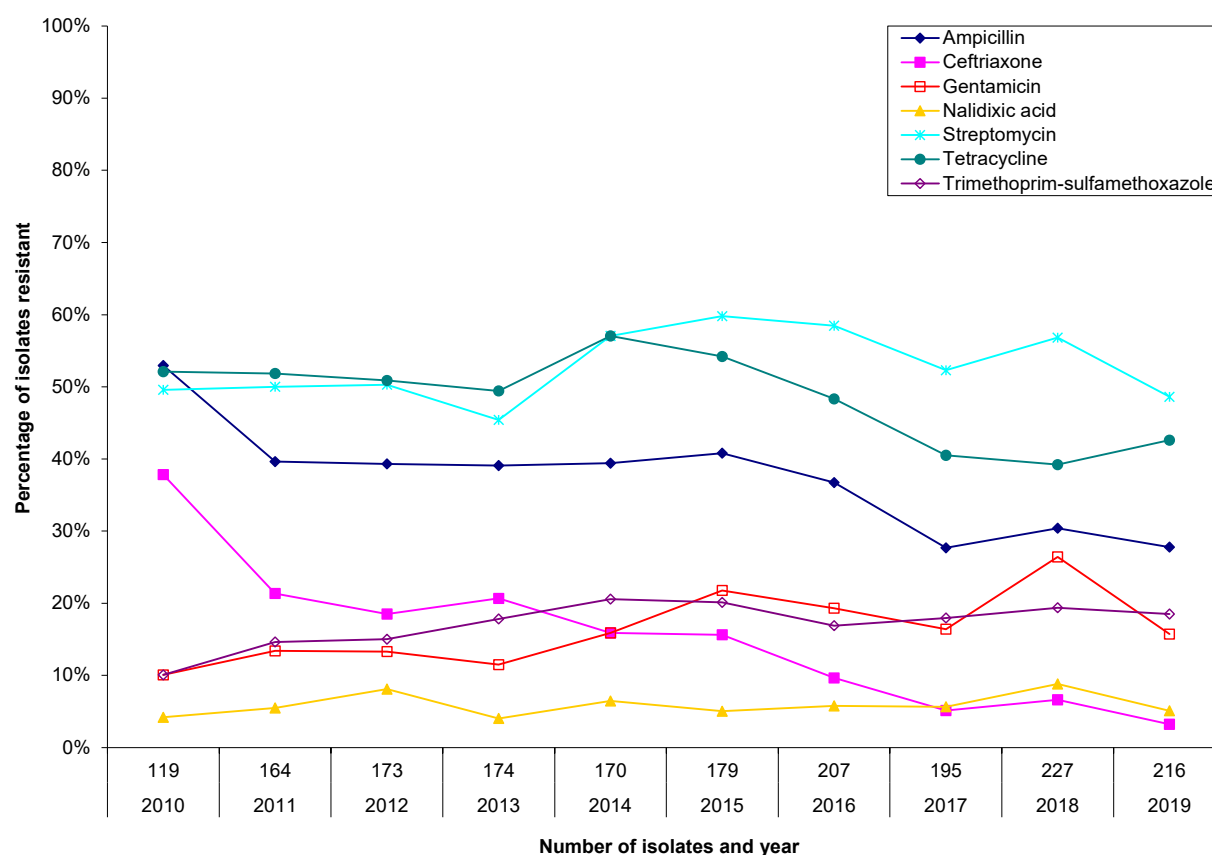

Figure 3. 19 Temporal variations in resistance of *Campylobacter* from beef cattle, 2010 to 2019

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years, 5 years, and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 20 Temporal variations in resistance of *Salmonella* isolates from chicken, 2010 to 2019

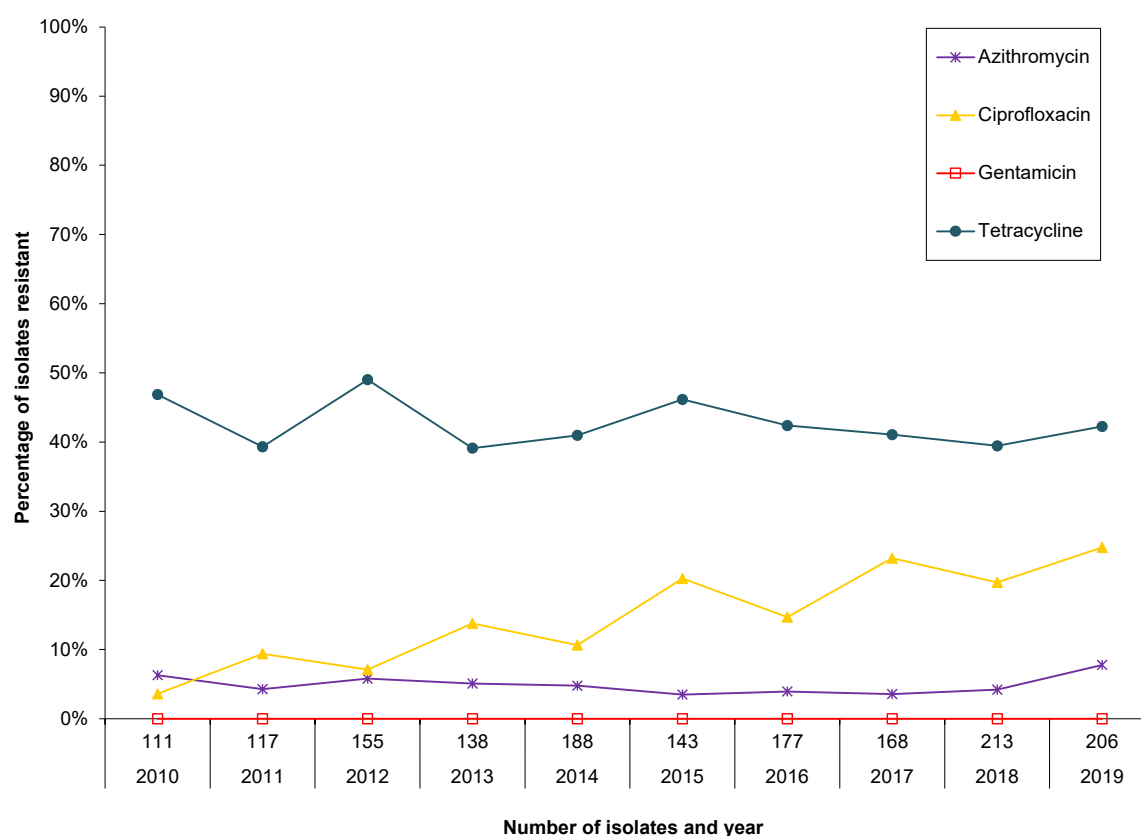

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	142	140	126	107	103	129	120	127	118	162
Antimicrobial

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years, 5 years, and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 24 Temporal variations in resistance of *Escherichia coli* isolates from pigs, 2010 to 2019

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	199	190	184	170	161	192	182	164	157	137
Antimicrobial										
Ampicillin	37%	37%	36%	39%	35%	35%	35%	38%	32%	30%
Ceftriaxone	2%	2%	2%	1%	2%	2%	3%	1%	3%	2%
Gentamicin	0%	1%	1%	3%	1%	2%	0%	1%	1%	0%
Nalidixic acid	0%	1%	0%	1%	0%	1%	1%	1%	1%	0%
Streptomycin	36%	30%	40%	41%	48%	47%	36%	44%	39%	41%
Tetracycline	72%	75%	84%	74%	74%	70%	71%	70%	55%	55%
Trimethoprim-sulfamethoxazole	14%	12%	14%	11%	12%	16%	9%	10%	8%	13%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years, 5 years, and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 25 Temporal variations in resistance of *Campylobacter* isolates from pigs, 2012 to 2019

Year	2012	2013	2014	2015	2016	2017	2018	2019
Number of isolates	287	253	236	279	265	236	235	210
Antimicrobial								
Azithromycin	53%	48%	53%	50%	45%	36%	30%	29%
Ciprofloxacin	10%	13%	11%	6%	13%	8%	10%	10%
Gentamicin	0%	0%	0%	0%	0%	0%	0%	0%
Tetracycline	76%	78%	78%	75%	78%	66%	60%	65%

For the temporal analyses, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 10 years, 5 years, and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Recovery results

	2007	98%	93/95	36%	105/296		
	2008	100%	150/150	44%	151/340		
	2009	98%	160/163	45%	147/327		
	2010	98%	199/203	44%	182/410		
	2011	99%	190/191	43%	165/382		
	2012	100%	184/184	42%	157/370	78%	289/370
	2013	99%	166/168	52%	171/330	76%	237/314
	2014	99%	161/162	49%	158/325	73%	237/325
	2015	98%	192/195	55%	211/385	72%	279/385
	2016	99%	182/184	51%	188/367	72%	265/366
	2017	98%	164/167	52%	175/336	71%	237/336
	2018	97%	157/162	57%	184/324	73%	235/324
	2019	100%	137/137	61%	169/276	76%	210/276

Grey-shaded areas indicate either: a) isolates recovered from sampling activities outside the scope of CIPARS routine (or “core”) surveillance in the specified year (i.e. grey-shaded areas with data) or b) discontinuation or no surveillance activity (i.e. grey-shaded areas with no data).

^a Implementation of a new *Campylobacter* recovery method in 2008 in abattoir beef cattle isolates.

^b In 2010 and 2013, the number of samples received from abattoir beef cattle was much lower than anticipated due to a drop in submissions related to unavoidable operational issues at 2 major participating abattoirs.

^c Decreased prevalence in chickens and one non-compliant plant (lack of sampling) resulted in a shortfall of *Salmonella* isolates from chickens.

Farm Surveillance

Multiclass resistance

Table 3. 19 Number of antimicrobial classes in resistance patterns of *Salmonella* from feedlot cattle, 2019

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Serovars represented by less than 2% of isolates were classified as "Less common serovars".

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Serovars represented by less than 2% of isolates were classified as "Less common serovars".

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Campylobacter spp. include unidentified species, some of which may be intrinsically resistant to nalidixic acid.

Temporal antimicrobial resistance summary

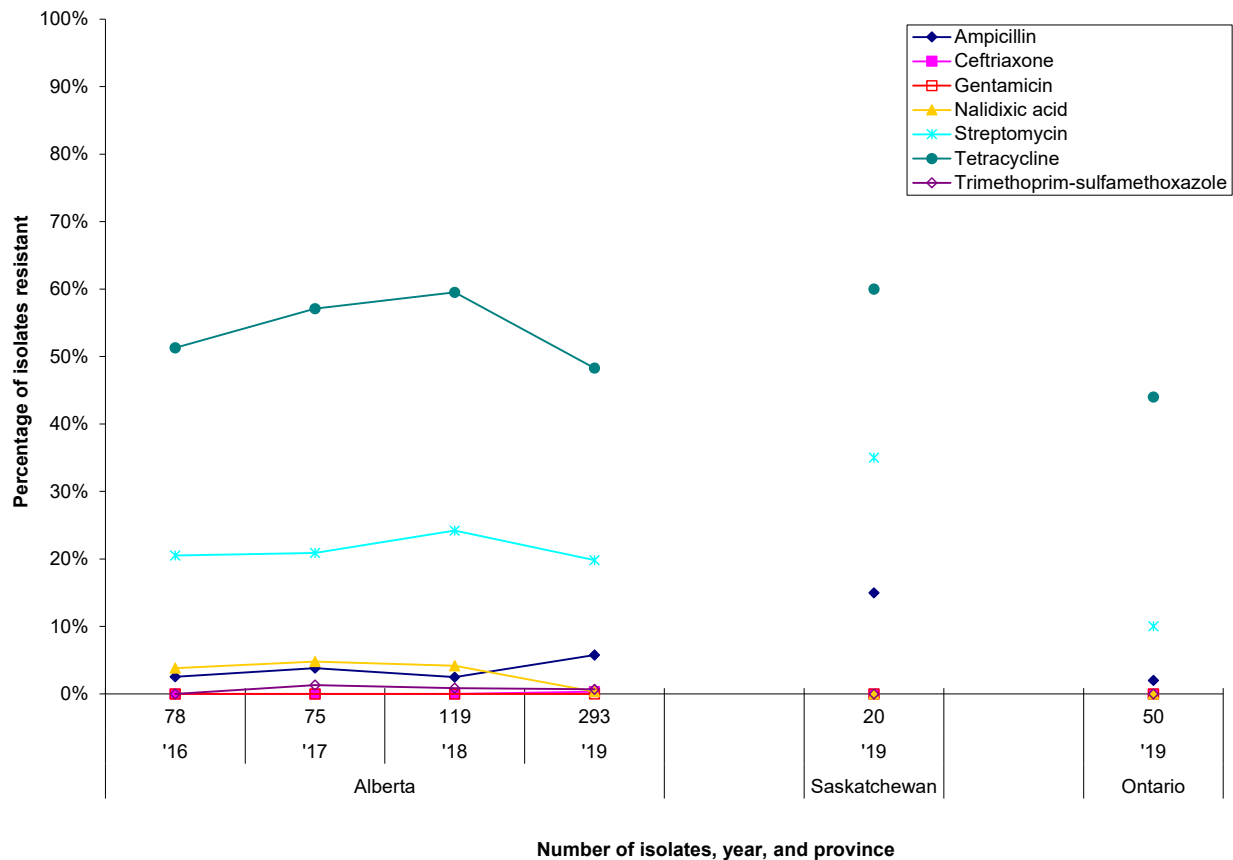

Figure 3. 26 Resistance of *Salmonella* isolates from feedlot cattle, 2019

Province/region	Alberta	Saskatchewan	Ontario	National
Number of isolates	13	0	13	26
Antimicrobial				
Ampicillin	29%	0%	0%	18%
Ceftriaxone	29%	0%	0%	18%
Gentamicin	0%	0%	0%	0%
Nalidixic acid	21%	0%	0%	14%
Streptomycin	29%	0%	14%	20%
Tetracycline	29%	0%	25%	27%
Trimethoprim-sulfamethoxazole	25%	0%	0%	12%

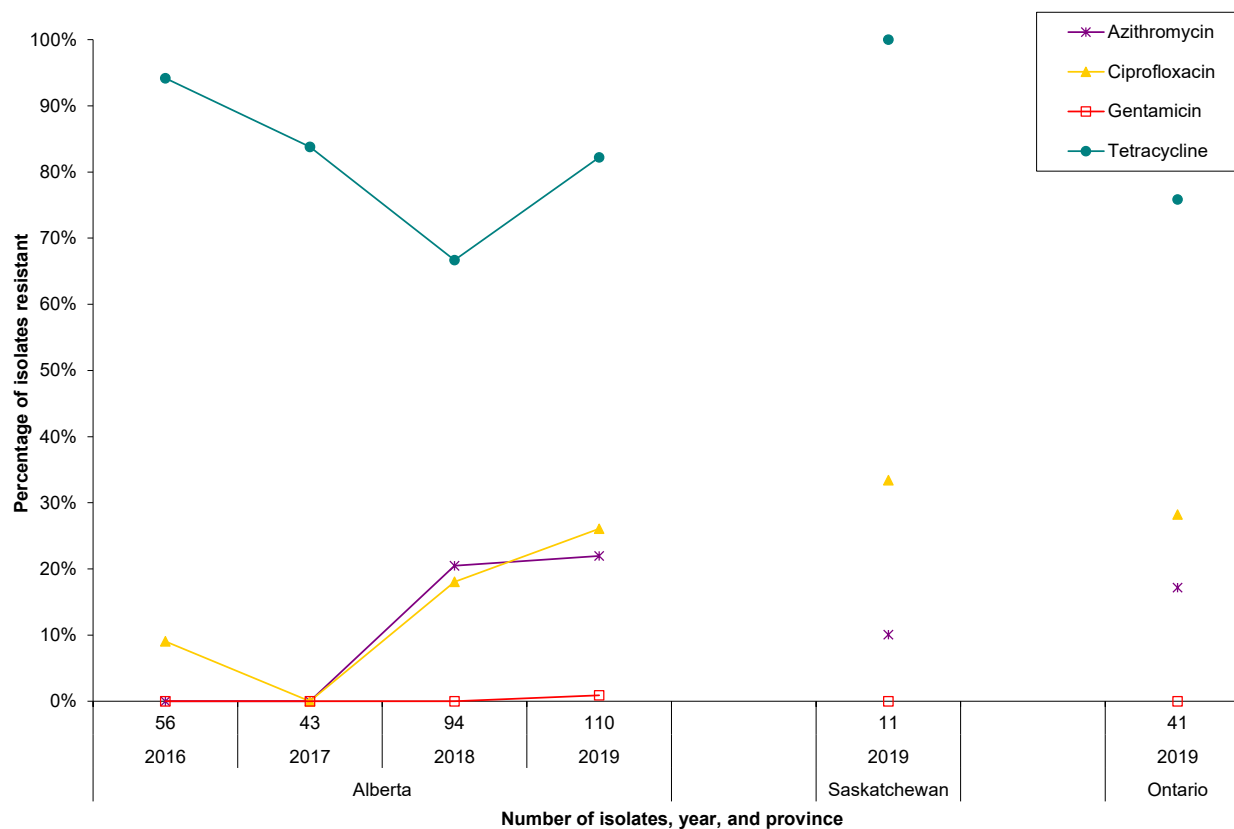

Twenty samples were collected in Saskatchewan; however, there were 0 isolates recovered.

The proportion of resistant isolates for all antimicrobials was adjusted to account for multiple samples per feedlot.

Figure 3. 27 Temporal variations in resistance of *Escherichia coli* isolates from feedlot cattle, 2016 to 2019

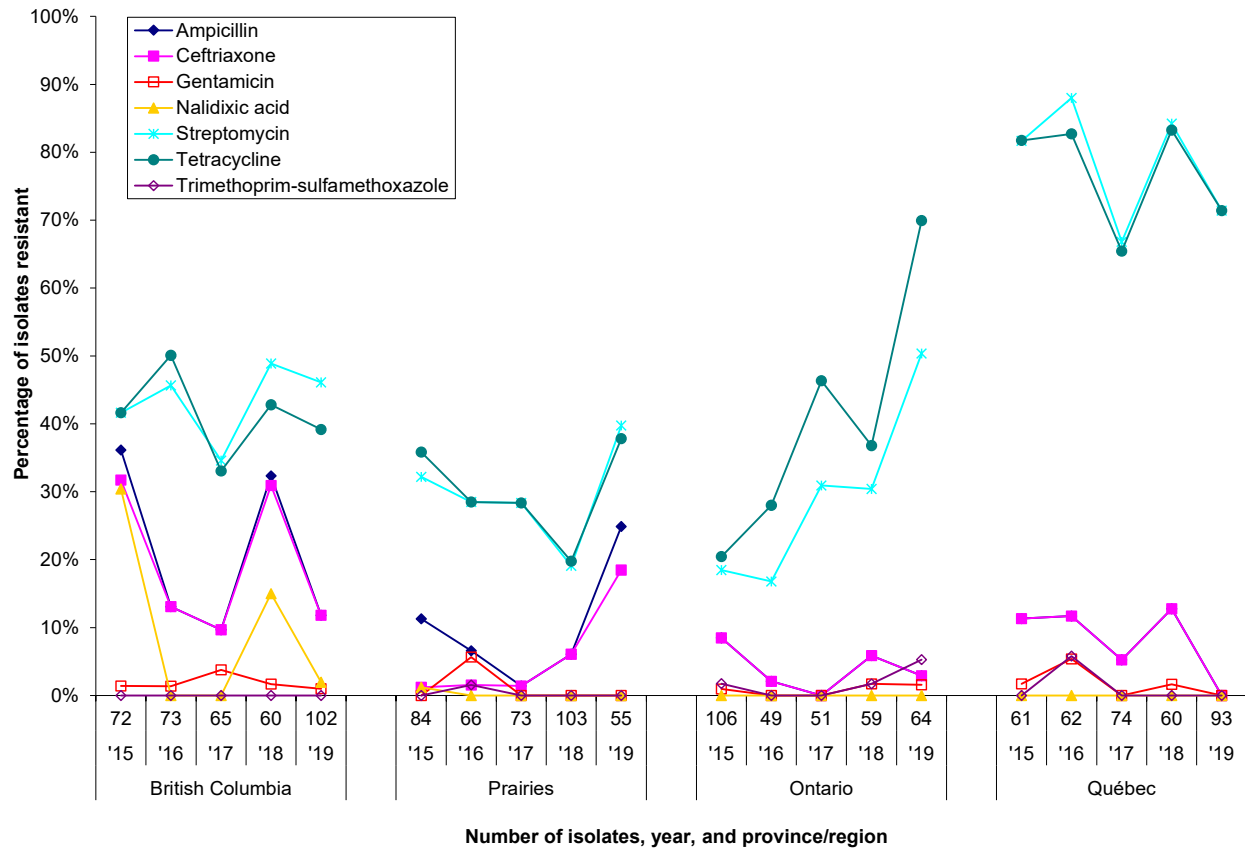

Province/region	Alberta				Saskatchewan	Ontario
Year	2016	2017	2018	2019	2019	2019
Number of isolates	78	75	119	293	20	50
Antimicrobial						
Ampicillin	3%	4%	2%	6%	15%	2%
Ceftriaxone	0%	0%	0%	0%	0%	0%
Gentamicin	0%	0%	0%	0%	0%	0%
Nalidixic acid	4%	5%	4%	0%	0%	0%
Streptomycin	21%	21%	24%	20%	35%	10%
Tetracycline	51%	57%	60%	48%	60%	44%
Trimethoprim-sulfamethoxazole	0%	1%	1%	1%	0%	0%

The proportion of resistant isolates for all antimicrobials was adjusted to account for multiple samples per feedlot. For the temporal analyses by province, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the first year of surveillance and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Figure 3. 28 Temporal variations in resistance of *Campylobacter* isolates from feedlot cattle, 2016 to 2019

Province / region	Alberta				Saskatchewan	Ontario
Year	2016	2017	2018	2019	2019	2019
Number of isolates	56	43	94	110	11	41
Antimicrobial						
Azithromycin	0%	0%	20%	22%	10%	17%
Ciprofloxacin	9%	0%	18%	26%	33%	28%
Gentamicin	0%	0%	0%	1%	0%	0%
Tetracycline	94%	84%	67%	82%	100%	76%

The proportion of resistant isolates for all antimicrobials was adjusted to account for multiple samples per feedlot. For the temporal analyses by province, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the first year of surveillance and the preceding surveillance year (grey areas). The presence of blue areas indicates significant differences ($P \leq 0.05$) for a given antimicrobial.

Year	'15	'16	'17	'18	'19	'15	'16	'17	'18	'19	'15	'16	'17	'18	'19
Number of isolates	43	46	46	49	52	43	34	26	49	55	35	30	45	41	58
Antimicrobial															
Ampicillin	5%	23%	32%	13%	35%	52%	11%	61%	58%	51%	43%	31%	52%	48%	51%
Ceftriaxone	5%	4%	2%	8%	12%	0%	0%	4%	12%	4%	3%	4%	7%	3%	2%
Gentamicin	0%	0%	2%	3%	7%	4%	0%	4%	11%	7%	3%	10%	8%	3%	6%
Nalidixic acid	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Streptomycin	26%	43%	43%	32%	50%	57%	39%	60%	62%	73%	67%	48%	67%	67%	69%
Tetracycline	32%	35%	45%	37%	40%	83%	54%	69%	73%	70%	77%	65%	73%	65%	68%
Trimethoprim-sulfamethoxazole	7%	4%	2%	4%	7%	0%	0%	11%	2%	4%	15%	29%	22%	26%	12%

The proportion of resistant isolates for all antimicrobials was adjusted to account for multiple samples per herd.

For the temporal analyses within province/region, the proportion (%) of isolates resistant to a specific antimicrobial over the current year has been compared to the proportion (%) of isolates resistant to the same antimicrobial during the previous 5 years and the preceding surveillance year (grey areas). The presence of blue areas indicate significant differences ($P \leq 0.05$) for a given province/region and antimicrobial.

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

		2018	99%	585/594	23%	139/594	82%	484/594			
		2019	98%	628/641	26%	165/641	70%	447/641			

Grey-shaded areas indicate either: a) isolates recovered from sampling activities outside the scope of CIPARS routine (or "core") surveillance in the specified year (i.e. grey-shaded areas with data) or b) discontinuation or no surveillance activity (i.e. grey-shaded areas with no data).

The Prairies is a region including the provinces of Alberta, Saskatchewan, and Manitoba.

Table 3. 34 Farm Surveillance recovery rates in turkeys, 2016 to 2019

Animal species	Province	Year	Percentage (%) of isolates recovered and number of isolates recovered / number of samples submitted					
			<i>Escherichia coli</i>	<i>Salmonella</i>	<i>Campylobacter</i>	<i>Enterococcus</i>		
Turkeys	British Columbia	2016	100%	116/116	43%	50/116	68%	79/116
		2017	98%	106/108	44%	47/108	75%	80/108
		2018	99%	118/119	55%	66/119	79%	94/119
		2019	100%	124/124	70%	87/124	70%	87/124
	Alberta	2018	98%	39/40	78%	31/40	35%	14/40
		2019	100%	40/40	78%	31/40	50%	20/40
	Ontario	2016	97%	113/116	60%	70/116	56%	65/116
		2017	100%	120/120	69%	83/120	42%	50/120
		2018	98%	118/120	81%	97/120	48%	58/120
		2019	98%	118/120	83%	100/120	46%	55/120
	Québec	2016	100%	48/48	54%	26/48	56%	27/48
		2017	95%	61/64	48%	31/64	42%	27/64
		2018	100%	92/92	49%	45/92	27%	25/92
		2019	97%	111/115	72%	83/115	46%	53/115
	National	2016	99%	277/280	52%	146/280	61%	171/280
		2017	98%	287/292	55%	161/292	54%	157/292
		2018	99%	367/371	64%	239/371	51%	191/371
		2019	98%	393/399	75%	301/399	54%	215/399

Grey-shaded areas indicate either: a) isolates recovered from sampling activities outside the scope of CIPARS routine (or "core") surveillance in the specified year (i.e. grey-shaded areas with data) or b) discontinuation or no surveillance activity (i.e. grey-shaded areas with no data).

Surveillance of Animal Clinical Isolates

Multiclass resistance

Table 3. 35 Number of antimicrobial classes in resistance patterns of *Salmonella* from cattle, 2019

Serovar	Number (%) of isolates	Number of isolates by number of antimicrobial classes in the resistance pattern					Number of isolates resistant by antimicrobial class and antimicrobial													
							Aminoglycosides		β-Lactams					Folate pathway inhibitors		Macrolides	Phenicol	Quinolones		Tetracyclines
		0	1	2–3	4–5	6–7	GEN	STR	AMP	AMC	CRO	FOX	MEM	SSS	SXT	AZM	CHL	CIP	NAL	TET

Montevideo	3 (2.7)	3																		
Uganda	3 (2.7)	2		1				1						1						1
Less common serovars	16 (14.3)	11		2	2	1		4	4	1	1	1		3	2	1	1	1	1	5
Total	112 (100)	30	2	7	43	30	5	77	71	53	53	49		78	17	2	68	4	33	76

Antimicrobial abbreviations are defined in the Appendix.

Red, blue, and black numbers indicate isolates resistant to antimicrobials in Categories I, II, and III of importance to human medicine, respectively.

Serovars represented by less than 2% of isolates were classified as “Less common serovars”.

Table 3. 36 Number of antimicrobial classes in resistance patterns of *Salmonella* from chickens, 2019

Serovar	Number (%) of isolates	Number of isolates by number of antimicrobial classes in the resistance pattern					Number of isolates resistant by antimicrobial class and antimicrobial													
							Aminoglycosides		β-Lactams					Folate pathway inhibitors		Macrolides	Phenicol	Quinolones		Tetracyclines

Serovars represented by less than 2% of isolates were classified as "Less common serovars".

Appendix

Abbreviations

Canadian provinces, territories, and regions

Provinces

BC British Columbia
AB Alberta
SK Saskatchewan
MB Manitoba
ON Ontario
QC Québec
NB New Brunswick
NS Nova Scotia
PE Prince Edward Island
NL Newfoundland and Labrador

Territories

YT Yukon
NT Northwest Territories
NU Nunavut

Regions⁶

Prairies: AB, SK, MB
Maritimes: NB, NS, PE
Atlantic⁷: NB, NS, PE, NL

Antimicrobials

AMC Amoxicillin-clavulanic acid
AMP Ampicillin
AZM Azithromycin
CHL Chloramphenicol
CIP Ciprofloxacin
CLI Clindamycin
CRO Ceftriaxone
ERY Erythromycin
FLR Florfenicol
FOX Cefoxitin

GEN Gentamicin
MEM Meropenem
NAL Nalidixic acid
SSS Sulfisoxazole
STR Streptomycin
SXT Trimethoprim-sulfamethoxazole
TET Tetracycline

⁶ In 2019, not all provinces are represented in each surveillance component for the Prairies and the Atlantic region.

⁷ In 2019, no sampling occurred in the Atlantic region.

Other abbreviations

APP *Actinobacillus pleuropneumoniae*

PCVAD Porcine Circovirus Associated Disease

PED Porcine Epidemic Diarrhea

PRRS Porcine Reproductive and Respiratory Syndrome

TGE Transmissible gastroenteritis
