Opioid and Stimulant Poisoning Hospitalizations

Surveillance of Opioid- and Stimulant-Related Harms in Canada

Health Canada is the federal department responsible for helping the people of Canada maintain and improve their health. Health Canada is committed to improving the lives of all of Canada's people and to making this country's population among the healthiest in the world as measured by longevity, lifestyle and effective use of the public health care system.

Prepared by the Substance-Related Overdose and Mortality Surveillance Task Group (SOMS-TG) of the Special Advisory Committee on the Epidemic of Opioid Overdoses (SAC)

Acknowledgments

This update would not be possible without the collaboration and dedication of provincial and territorial (PT) offices of Chief Coroners and Chief Medical Examiners as well as PT public health and health partners and Emergency Medical Services data providers. We would also like to acknowledge the Canadian Institute for Health Information (CIHI) for collecting and providing the data used for reporting opioid- and stimulant-related poisoning hospitalizations.

Key Findings

Context

There is evidence the COVID-19 pandemic is contributing to the already deadly and ongoing national public health overdose crisis. This crisis is having a tragic impact on people who use substances, their families, and communities across Canada. People who use substances, such as opioids, cocaine, and methamphetamine, are experiencing a number of increased risks, with several jurisdictions reporting higher rates of fatal overdoses and other harms.

These updates include available data on overdoses and deaths involving opioids and/or stimulants from January 2016 to December 2021, where available. Recognizing that harms related to opioids, stimulants, and other substances extend beyond overdoses (poisonings) and deaths, we continue to work with federal, provincial and territorial partners to build a broad understanding of harms and substances involved to better respond to this public health crisis. <u>Additional studies</u> can also help us plan and tailor actions to achieve better possible outcomes. Dr. Theresa Tam, Canada's Chief Public Health Officer, and Dr. Jennifer Russell, the Chief Medical Officer of Health of New Brunswick, share their perspectives on these data, the overdose crisis and actions needed to prevent further substance-related harms in Canada in this joint statement.

What: There was a total of 30,860 opioid-related and 13,575 stimulant-related poisoning hospitalizations from January 2016 to December 2021 in Canada (excluding Quebec)

- During the first year of the pandemic, there was a 27% increase in opioid-related poisoning hospitalizations (April 2020 March 2021, 5,599 hospitalizations), compared to the year before (April 2019 March 2020, 4,426 hospitalizations). Since then, opioid-related poisoning hospitalizations have continued to increase.
- A total of 6,164 opioid-related poisoning hospitalizations occurred in 2021 (January – December). This is approximately 17 hospitalizations per day. In the years prior to the pandemic, there were between 12 (in 2019) and 14 (in 2017) hospitalizations per day.
- A total of 2,387 stimulant-related poisoning hospitalizations occurred in 2021 (January December).
 This is approximately seven hospitalizations per day. In the years prior to the pandemic, there were between five (in 2016) and six (in 2019) hospitalizations per day.
- Median total length of hospital stay was three days for both opioid- and stimulant-related poisoning hospitalizations in 2021 (January December).
- Of all opioid-related poisoning hospitalizations, 32% involved fentanyl or fentanyl analogues. Among accidental opioid-related poisoning hospitalizations, a larger proportion involved fentanyl (35%) than among intentional poisonings (18%) in 2021 (January December).

Data on opioid-related and stimulant-related poisoning hospitalizations are not mutually exclusive. A proportion of poisoning hospitalizations involving a stimulant also involved an opioid. Adding up those numbers would result in an overestimation of the burden of opioids and stimulants.

Where: A majority of hospitalizations occurred in British Columbia, Alberta and Ontario

- Rates of opioid- and stimulant-related poisoning hospitalizations continue to remain highest in British Columbia, Saskatchewan and Alberta, followed by Territories and Ontario.
- In 2021 (January December), 88% of poisoning hospitalizations involving opioids and 85% of poisoning hospitalizations involving stimulants occurred in British Columbia, Alberta, or Ontario.

Who: Most accidental poisoning hospitalizations among males and individuals aged 20 to 49 years

- Most accidental opioid-related poisoning hospitalizations occurred among males (65%) and among individuals aged 20 to 49 years (58%) in 2021 (January December).
- Most accidental stimulant-related poisoning hospitalizations occurred among males (68%) and among individuals aged 20 to 49 years (72%) in 2021 (January December).

Poisoning hospitalizations associated with multiple substances in 2021 (January to December)

- Of all opioid-related poisoning hospitalizations, 28% involved co-poisoning with a non-opioid substance; 17% involved co-poisoning with a stimulant.
 - Among intentional opioid-related poisoning hospitalizations, a larger proportion involved a co-occurring non-opioid substance (43%) than among accidental poisonings (24%).
- Of all stimulant-related poisoning hospitalizations, 61% involved co-poisoning with a non-stimulant substance; 43% of all stimulant-related poisoning hospitalizations involved co-poisoning with opioids (including fentanyl or fentanyl analogues), while 24% involved specifically fentanyl or fentanyl analogues.
 - Among accidental stimulant-related poisoning hospitalizations, a larger proportion involved fentanyl or fentanyl analogues (32%) than among intentional (8%) poisonings.

This update is based on data extracted by Health Canada on or before May 10, 2022. Due to differences in identifying and reporting cases, comparisons over time and between provinces and territories should be interpreted with caution. Refer to the <u>Technical Notes</u> for more information.

Technical Notes

Definitions

Opioid-related poisoning hospitalization: Acute care hospitalizations that recorded a significant diagnosis for opioid-related poisoning. Please see <u>Table A</u> for a list of diagnosis codes for opioid-related poisonings.

Accidental opioid-related poisoning hospitalization: An opioid-related poisoning hospitalization that is considered to be non-intentional in nature and is defined by a diagnostic "X42" ICD -10-CA code associated with any significant opioid-related poisoning codes (T40.0-T40.4 and T40.6, see <u>Table A</u> for more information).

Intentional opioid-related poisoning hospitalization: An opioid-related poisoning hospitalization that occurred as a result of purposely self-inflicted harm and is defined by a diagnostic "X62" ICD-10-CA code associated with any significant opioid-related poisoning codes" (T40.0-T40.4 and T40.6, see <u>Table A</u> for more information).

Undetermined opioid-related poisoning hospitalization: An opioid-related poisoning hospitalization that is categorized by physician documentation of undetermined/unknown intent and is defined by a diagnostic "Y12" ICD-10-CA code associated with any significant opioid-related poisoning codes (T40.0-T40.4 and T40.6, see <u>Table A</u> for more information).

Stimulant-related poisoning hospitalization: Acute care hospitalizations that recorded a significant diagnosis for stimulant-related poisoning. Please see <u>Table B</u> for a list of diagnosis codes for stimulant- related poisonings.

Accidental stimulant-related poisoning hospitalization: A stimulant-related poisoning hospitalization that is considered to be non-intentional in nature and is defined by a diagnostic "X41" or "X42" ICD -10-CA code associated with any significant stimulant-related poisoning codes (T40.5 and T43.6, see <u>Table B</u> for more information).

Intentional stimulant-related poisoning hospitalization: A stimulant-related poisoning hospitalization that occurred as a result of purposely self-inflicted harm and is defined by a diagnostic "X61" or "X62" ICD-10- CA code associated with any significant stimulant-related poisoning codes (T40.5 and T43.6, see <u>Table B</u> for more information).

Undetermined stimulant-related poisoning hospitalization: A stimulant-related poisoning hospitalization that is categorized by physician documentation of undetermined/unknown intent and is defined by a diagnostic "Y11" or "Y12" ICD-10-CA code associated with any significant stimulant-related poisoning codes (T40.5 and T43.6, see <u>Table B</u> for more information).

How poisoning hospitalizations are counted

Data on opioid- and stimulant-related poisoning hospitalizations are extracted from the Discharge Abstract Database (DAD), a national administrative database from the Canadian Institute for Health Information (CIHI) that compiles information on hospital discharges (including deaths, sign-outs, and transfers) from acute care institutions in all provinces and territories, except Quebec. CIHI receives the data directly from acute care facilities or from their health/regional authority or ministry/department of health. Data were extracted for analyses using the CIHI Portal by Health Canada. Only inpatient hospitalizations from acute care facilities were included in the analyses.

Opioid and stimulant- related poisoning hospitalizations were identified as follows:

- Poisoning diagnoses were based on the International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, Canada (ICD-10-CA), which is used to code up to 25 diagnoses per hospital record, as it is the national standard for reporting morbidity. Refer to <u>Table A</u> for details on the ICD-10-CA codes used to identify opioid-related poisonings (T40.0- T40.4 and T40.6) and <u>Table B</u> for details on the ICD-10-CA codes used to identify stimulant- related poisonings (T40.5 and T43.6). Additional ICD-10-CA codes were used to classify the hospitalizations by intent.
- Hospitalizations were included if the opioid or stimulant-related poisoning diagnosis was
 considered influential to the time spent and/or treatment received while in hospital, identified
 by diagnosis types "M" (most responsible diagnosis (MRD)), "1" (pre-admission comorbidity),
 "2" (post-admission comorbidity), and "W", "X", "Y" (service transfer diagnosis).
- Hospitalizations where the diagnosis was considered questionable, as indicated by prefix code of "Q", were excluded.

Crude and age-adjusted rates are calculated using the most current population data from Statistics Canada. Age-adjusted rates used the 2016 Canadian population as a reference and direct standardization was applied.

Crude rates: summarize the situation within a region at a certain time period and have not been adjusted for existing differences by provincial and territorial age distributions (e.g. (number of hospitalizations / population) x 100,000).

Age-adjusted rates: have been adjusted for existing differences by provincial and territorial age distributions using the 2016 Canadian population as a reference. These rates assume that all regions have the same age distributions and are useful when comparing between regions and over time.

Limitations of the data on poisoning hospitalizations

General notes

- 1. The unit of observation for this analysis was a discharged inpatient hospitalization visit, rather than an individual patient. The time period reported is the calendar year in which a patient was discharged from the nursing unit of the reporting facility. The province or territory reflects the location of the reporting facility where the hospitalization occurred.
- 2. To facilitate comparisons over time as well as across jurisdictions, age-adjusted rates per 100,000 population per year were calculated using the latest population estimates from Statistics Canada.
- 3. Data on hospitalizations from Quebec are not included in the Discharge Abstract Database; subsequently, Quebec is excluded from these analyses.
- 4. Data from Yukon, Northwest Territories and Nunavut were combined due to small numbers.
- 5. Data collected through DAD or the ICD-10-CA codes do not specify how the opioids were obtained (e.g. illegally or through personal prescription); the level of toxicity may differ depending on the opioid (substance(s) involved, concentration, and dosage).

Intention

- 6. Poisonings were further examined by the documented reason for the poisoning, based on ICD-10-CA diagnostic type "9" (external cause of injury), and classified into three categories: accidental, intentional, and undetermined/unknown.
- 7. Poisonings are classified as accidental unless there is clear documentation of intentional self-harm or undetermined intent.
- 8. When there was no documentation of intent, hospitalizations were excluded from analysis by intention, but were included in the total number of cases.

Sex and age group

9. For most provinces or territories, data on the sex of the individual was based on biological characteristics or legal documentation. Data on hospitalizations where sex was categorized as "Other" were excluded from analyses by sex, but were included in the overall analyses. Data on hospitalizations where age group was categorized as "Unknown" were excluded from analyses by age group, but were included in overall analyses. Due to rounding, percentages may not to 100%.

Fentanyl and fentanyl analogues

10. Data on accidental opioid-related poisoning hospitalizations involving fentanyl or fentanyl analogues should be interpreted with caution as data on fentanyl-related poisoning hospitalizations became available starting April 1, 2018. As a result, fentanyl-related data presented for 2018 are limited to April to December. The ICD-10-CA classification codes to describe outcomes related to fentanyl and fentanyl analogues ("T40.40 – Poisoning by fentanyl and derivatives") was used in data collection starting 2018-19 fiscal year, as they did not exist prior to that.

Methamphetamine

11. Data specifically on methamphetamine-related poisoning hospitalizations are of interest. However, there is currently no ICD-10-CA code specific to poisoning by methamphetamine. The ICD-10-CA code T43.6 currently includes poisonings related to methamphetamine as well as other psychostimulants (excl. cocaine). Once an ICD-10-CA code specific to poisoning by methamphetamine is available, it will be incorporated into analyses.

Co-occurring non-opioid poisonings

12. Opioid-related poisoning hospitalizations were further examined for diagnoses of poisoning from one or more co-occurring non-opioid substance in the same hospital stay. Diagnoses for non-opioid substance-related poisoning were identified using ICD-10-CA codes and included poisonings from psychoactive substances. These codes were limited to diagnoses considered influential to the time spent/treatment received in hospital and cases where the diagnosis was considered questionable, as indicated by prefix code "Q", were excluded. Co-occurring poisonings due to non-psychoactive substances (such as non-opioid analgesics, etc.) and anti-depressants were not included. Refer to Table C for details on ICD-10-CA codes used to identify non-opioid-related poisonings.

Co-occurring non-stimulant poisonings

13. Stimulant-related poisoning hospitalizations were further examined for diagnoses of poisoning from one or more co-occurring non-stimulant substance in the same hospital stay. Diagnoses for non-stimulant substance-related poisoning were identified using ICD-10-CA codes and included poisonings from other substances. These codes were limited to diagnoses considered influential to the time spent/treatment received in hospital and cases where the diagnosis was considered questionable, as indicated by prefix code "Q", were excluded. Refer to Table D for details on ICD-10- CA codes used to identify non-stimulant-related poisonings.

Co-occurring non-stimulant/non-opioid poisonings

14. Stimulant and opioid -related poisoning hospitalizations were further examined for diagnoses of poisoning from one or more co-occurring non-stimulant/non-opioid substance in the same hospital stay. Diagnoses for non-stimulant/non-opioid substance-related poisoning were identified using ICD-10-CA codes and included poisonings from other substances. These codes were limited to diagnoses considered influential to the time spent/treatment received in hospital and cases where the diagnosis was considered questionable, as indicated by prefix code "Q", were excluded. Refer to Table E for details on ICD-10- CA codes used to identify non-stimulant/ non-opioid-related poisonings.

Data suppression

Counts less than five have been suppressed as per CIHI privacy guidelines.

Table A. List of diagnosis codes included for opioid-related poisonings

| Code | Details |
|---------|---|
| T40.0 | Poisoning by opium |
| T40.1 | Poisoning by heroin |
| T40.2 | Poisoning by other opioids |
| T40.20* | Poisoning by codeine and derivatives |
| T40.21* | Poisoning by morphine |
| T40.22* | Poisoning by hydromorphone |
| T40.23* | Poisoning by oxycodone |
| T40.28* | Poisoning by other opioids not elsewhere classified |
| T40.3 | Poisoning by methadone |
| T40.4 | Poisoning by other synthetic narcotics |
| T40.40* | Poisoning by fentanyl and derivatives |
| T40.41* | Poisoning by tramadol |
| T40.48* | Poisoning by other synthetic narcotics not elsewhere classified |
| T40.6 | Poisoning by other and unspecified narcotics |

^{*}Introduced as of April 1, 2018

Table B. List of diagnosis codes included for stimulant-related poisonings

| Code | Details |
|-------|--|
| T40.5 | Poisoning by cocaine |

Not available (n/a) Data were not available.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals used to calculate age-adjusted rates do not include cases with missing age in provinces/territories.

Refer to <u>Technical notes</u> for more information.

Table 3a. Summary of opioid-related poisoning hospitalizations by intention, 2016 to 2021

| Intention | 2016 | | 2017 | | 2018 | | 20 | 19 | 202 | 20 | 2021 | |
|-------------|--------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| | Number | % |
| Total | 4,687 | 100% | 5,203 | 100% | 5,052 | 100% | 4,514 | 100% | 5,240 | 100% | 6,164 | 100% |
| Accidental | 2,596 | 55% | 3,027 | 58% | 3,213 | 64% | 2,805 | 62% | 3,572 | 68% | 4,355 | 71% |
| Intentional | 1,370 | 29% | 1,388 | 27% | 1,247 | 25% | 1,170 | 26% | 1,068 | 20% | 1,129 | 18% |
| Unknown | 600 | 13% | 651 | 13% | 561 | 11% | 531 | 12% | 596 | 11% | 670 | 11% |

Note(s)

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

The total number include opioid-related poisoning hospitalizations for which the intent was not recorded. Intention categories may sum to greater than the total number due to multiple intentions being recorded on the same record.

Refer to <u>Technical notes</u> for more information.

Table 3b. Summary of total opioid-related poisoning hospitalizations in Canada, 2016 to 2021

| | | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|-------------------------------------|---|-------|-------|-------|-------|-------|-------|
| | Number | 4,687 | 5,203 | 5,052 | 4,514 | 5,240 | 6,164 |
| Total | Crude rate | 16.8 | 18.4 | 17.6 | 15.5 | 17.8 | 20.8 |
| | Age adjusted rate | 16.8 | 18.4 | 17.6 | 15.5 | 17.8 | 20.7 |
| Percent by sex | Male | 50% | 55% | 55% | 54% | 60% | 62% |
| Percent by Sex | Female | 50% | 45% | 45% | 46% | 40% | 38% |
| | 0 to 19 | 6% | 6% | 7% | 6% | 5% | 5% |
| | 20 to 29 | 17% | 18% | 18% | 17% | 17% | 17% |
| Percent by | 30 to 39 | 16% | 19% | 19% | 20% | 21% | 23% |
| age group | 40 to 49 | 15% | 14% | 16% | 14% | 16% | 18% |
| | 50 to 59 | 20% | 19% | 18% | 18% | 18% | 16% |
| | 60 or more | 27% | 25% | 23% | 25% | 22% | 22% |
| | Fentanyl or fentanyl analogues | n/a | n/a | 16% | 21% | 28% | 32% |
| Percent involving | Co-occurring non-opioid poisonings | 36% | 36% | 35% | 35% | 33% | 28% |
| (categories not mutually exclusive) | Co-occurring stimulant poisonings | 16% | 18% | 20% | 19% | 20% | 17% |
| , , | Co-occurring non-stimulant/ non-opioid poisonings | 28% | 25% | 23% | 22% | 20% | 17% |
| Median total length | of stay (in days) | 3 | 3 | 3 | 3 | 3 | 3 |

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals used to calculate age-adjusted rates do not include cases with missing age. The ICD-10-CA code for poisoning by fentanyl and derivatives was introduced April 2018. Fentanyl-specific data were not available prior to this date. Data on opioid-related and stimulant-related poisoning hospitalizations are not mutually exclusive. A proportion of poisoning hospitalizations involving a stimulant also involved an opioid. Adding up those numbers would result in an overestimation of the burden of opioids and stimulants.

Refer to the <u>Technical notes</u> for more information.

Table 3c. Summary of intentional opioid-related poisoning hospitalizations in Canada, 2016 to 2021

| | | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|---|---|-------|-------|-------|-------|-------|-------|
| | Number | 1,370 | 1,388 | 1,247 | 1,170 | 1,068 | 1,129 |

Not available (n/a) Data were not available.

Q1 = January to March; Q2 = April to June; Q3 = July to September; Q4 = October to December

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for Canada by year may not match those from other tables, as they do not include the suppressed numbers in provinces/territories, in order to comply with privacy and confidentiality rules.

Refer to Technical notes for more information.

Not available (n/a) Data were not available.

Q1 = January to March; Q2 = April to June; Q3 = July to September; Q4 = October to December

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for Canada by year may not match those from other tables, as they do not include the suppressed numbers in provinces/territories, in order to comply with privacy and confidentiality rules.

Refer to Technical notes for more information.

Suppressed (Suppr.) Data may be suppressed in provinces or territories with low numbers of cases in order to comply with

privacy and confidentiality rules.

Not available (n/a) Data were not available.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Does not include cases with missing age. Totals used to calculate Canada proportions do not include the suppressed numbers, in order to comply with privacy and confidentiality rules.

Refer to <u>Technical notes</u> for more information.

Table 8a. Number of total opioid-related poisoning hospitalizations in Canada, sex by age group, 2016 to 2021

| Sex by age group | 20 ⁻ | 16 | 2017 | | 2018 | | 2019 | | 2020 | | 2021 | |
|------------------|-----------------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male |
| 0 to 19 | 151 | 111 | 186 | 117 | 207 | 123 | 149 | 128 | 157 | 127 | 176 | 134 |
| 20 to 29 | 289 | 490 | 318 | 620 | 335 | 571 | 289 | 476 | 305 | 565 | 335 | 704 |
| 30 to 39 | 295 | 450 | 325 | 641 | 309 | 641 | 346 | 552 | 363 | 744 | 494 | 907 |
| 40 to 49 | 371 | 341 | 316 | 437 | 345 | 457 | 278 | 370 | 320 | 541 | 380 | 720 |
| 50 to 59 | 467 | 466 | 494 | 471 | 445 | 441 | 404 | 401 | 361 | 581 | 348 | 630 |
| 60 or more | 754 | 499 | 678 | 598 | 644 | 533 | 614 | 507 | 595 | 578 | 618 | 707 |

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Refer to <u>Technical Notes</u> for more information.

Table 8b. Number of intentional opioid-related poisoning hospitalizations in Canada, sex by age group, 2016 to 2021

| Sex by age group | 20 ⁻ | 16 | 20 | 17 | 20 | 2018 | | 2019 | | 2020 | | 2021 | |
|------------------|-----------------|------|--------|------|--------|------|--------|------|--------|------|--------|------|--|
| | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male | |
| 0 to 19 | 93 | 37 | 107 | 24 | 113 | 41 | 91 | 33 | 78 | 22 | 91 | 27 | |
| 20 to 29 | 124 | 121 | 127 | 136 | 128 | 96 | 122 | 93 | 111 | 103 | 85 | 106 | |
| 30 to 39 | 124 | 115 | 117 | 142 | 102 | 110 | 123 | 86 | 108 | 100 | 102 | 112 | |
| 40 to 49 | 154 | 88 | 113 | 115 | 121 | 93 | 100 | 100 | 89 | 82 | 110 | 71 | |
| 50 to 59 | 164 | 136 | 172 | 112 | 145 | 75 | 132 | 84 | 92 | 84 | 85 | 82 | |
| 60 or more | 128 | 85 | 114 | 108 | 121 | 102 | 119 | 87 | 111 | 87 | 126 | 128 | |

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Refer to $\underline{\text{Technical notes}}$ for more information.

Table 8c. Number of accidental opioid-related poisoning hospitalizations, sex by age group, 2016 to 2021

| Sex by age group | 20 ⁻ | 16 | 2017 | | 2018 | | 2019 | | 2020 | | 2021 | |
|------------------|-----------------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male |
| 0 to 19 | 49 | 62 | 64 | 76 | 77 | 69 | 54 | 85 | 68 | 95 | 76 | 92 |
| 20 to 29 | 120 | 282 | 154 | 378 | 169 | 398 | 135 | 321 | 166 | 395 | 210 | 509 |
| 30 to 39 | 141 | 247 | 156 | 410 | 173 | 454 | 181 | 383 | 206 | 536 | 340 | 681 |

| 50 to 59 | 236 | 240 | 252 | 282 | 255 | 299 | 230 | 240 | 239 | 413 | 225 | 478 |
| 60 or more | 517 | 345 | 460 | 374 | 460 | 375 | 436 | 369 | 432 | 443 | 438 | 509 |

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Refer to <u>Technical notes</u> for more information.

Table 9. Percentage of accidental opioid-related poisoning hospitalizations involving fentanyl or fentanyl analogues by province or territory, 2016 to 2021

| Province or territory | 2016 | 2017 | 2018 (Apr to Dec) | 2019 | 2020 | 2021 |
|-----------------------|------|------|----------------------|--------|--------|--------|
| ВС | n/a | n/a | 33% | 40% | 42% | 41% |
| AB | n/a | n/a | 16% | 20% | 19% | 22% |
| SK | n/a | n/a | 7% | 6% | 25% | 30% |
| MB | n/a | n/a | 11% | 13% | 14% | 30% |
| ON | n/a | n/a | 13% | 23% | 33% | 40% |
| QC | n/a | n/a | n/a | n/a | n/a | n/a |
| NB | n/a | n/a | 0% | Suppr. | Suppr. | Suppr. |
| NS | n/a | n/a | 0% | 0% | 0% | Suppr. |
| PE | n/a | n/a | Suppr. | 0% | 0% | 0% |
| NL | n/a | n/a | Suppr. | 0% | 0% | Suppr. |
| Territories | n/a | n/a | 40% | Suppr. | 45% | Suppr. |
| Canada | n/a | n/a | 19% | 25% | 32% | 35% |

Suppressed (Suppr.) Data may be suppressed in provinces or territories with low numbers of cases in order to comply with

privacy and confidentiality rules.

Not available (n/a) Data were not available.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

The ICD-10-CA code for poisoning by fentanyl and derivatives was introduced April 2018. Fentanyl-specific data were not available prior to this date.

Table 10. Percentage of accidental opioid-related poisoning hospitalizations by substances involved, in Canada, 2016 to 2021

| | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|--|-------|-------|-------|-------|-------|-------|
| Total number | 2,596 | 3,027 | 3,213 | 2,805 | 3,572 | 4,355 |
| Percent involving co-occurring non-opioid poisonings | 29% | 30% | 30% | 28% | 29% | 24% |
| Percent involving co-occurring stimulant poisonings | 16% | 18% | 20% | 18% | 20% | 17% |
| Percent involving co-occurring non-stimulant/non-opioid poisonings | 20% | 19% | 18% | 17% | 16% | 13% |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Data on opioid-related and stimulant-related poisoning hospitalizations are not mutually exclusive. A proportion of poisoning hospitalizations involving a stimulant also involved an opioid. Adding up those numbers would result in an overestimation of the burden of opioids and stimulants.

Table 11a. Number and crude rate of total stimulant-related poisoning hospitalizations by province or territory, 2016 to 2021

| | | 2016 | | 2017 | | 2018 | | 2019 | : | 2020 | | 2021 |

Not available (n/a) Data were not available.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals used to calculate age-adjusted rates do not include cases with missing age.

Table 13a. Summary of stimulant-related poisoning hospitalizations by intention, 2016 to 2021

| | 201 | 6 | 201 | 17 | 201 | 18 | 201 | 19 | 202 | 20 | 202 | 21 |
|-------------|--------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| Intention | Number | % |
| Total | 1,885 | 100% | 2,235 | 100% | 2,373 | 100% | 2,179 | 100% | 2,516 | 100% | 2,387 | 100% |
| Accidental | 940 | 50% | 1,156 | 52% | 1,305 | 55% | 1,151 | 53% | 1,449 | 58% | 1,381 | 58% |
| Intentional | 649 | 34% | 699 | 31% | 696 | 29% | 703 | 32% | 730 | 29% | 685 | 29% |
| Unknown | 288 | 15% | 382 | 17% | 376 | 16% | 329 | 15% | 327 | 13% | 332 | 14% |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

The total number include stimulant-related poisoning hospitalizations for which the intent was not recorded. Intention categories may sum to greater than the total number due to multiple intentions recorded on the same record.

Table 13b. Summary of total stimulant-related poisoning hospitalizations in Canada, 2016 to 2021

| | | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|-------------------------------------|--|-------|-------|-------|-------|-------|-------|
| | Number | 1,885 | 2,235 | 2,373 | 2,179 | 2,516 | 2,387 |
| Total | Crude rate | 6.8 | 7.9 | 8.3 | 7.5 | 8.5 | 8.1 |
| | Age adjusted rate | 6.8 | 7.9 | 8.3 | 7.5 | 8.6 | 8.1 |
| Davaget by say | Male | 60% | 62% | 61% | 60% | 61% | 60% |
| Percent by sex | Female | 40% | 38% | 39% | 40% | 39% | 40% |
| | 0 to 19 | 14% | 14% | 13% | 16% | 14% | 16% |
| | 20 to 29 | 32% | 29% | 29% | 27% | 25% | 23% |
| Percent by | 30 to 39 | 24% | 26% | 27% | 26% | 28% | 25% |
| age group | 40 to 49 | 16% | 16% | 15% | 14% | 17% | 19% |
| | 50 to 59 | 11% | 10% | 11% | 12% | 11% | 10% |
| | 60 or more | 4% | 5% | 5% | 6% | 6% | 6% |
| | Cocaine | 49% | 52% | 52% | 46% | 50% | 49% |
| | Other psychostimulants (excl. cocaine) | 62% | 59% | 58% | 65% | 62% | 63% |
| Percent involving | Co-occurring non-stimulant poisonings | 61% | 62% | 63% | 60% | 62% | 61% |
| (categories not mutually exclusive) | Co-occurring opioid poisonings (incl. fentanyl or analogues) | 40% | 42% | 42% | 39% | 42% | 43% |
| | Co-occurring fentanyl or analogues poisonings | n/a | n/a | 11% | 14% | 18% | 24% |
| | Co-occurring non-stimulant/ non-opioid poisonings | 40% | 38% | 38% | 35% | 35% | 33% |
| Median total length | of stay (in days) | 2 | 2 | 2 | 2 | 2 | 3 |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals used to calculate age-adjusted rates do not include cases with missing age. The ICD-10-CA code for poisoning by fentanyl and derivatives was introduced April 2018. Fentanyl-specific data were not available prior to this date. Data on opioid-related and stimulant-related poisoning hospitalizations are not mutually exclusive. A proportion of poisoning hospitalizations involving a stimulant also involved an opioid. Adding up those numbers would result in an overestimation of the burden of opioids and stimulants. Stimulant-related poisoning hospitalizations involving cocaine and other psychostimulants may exceed 100% as poisonings may co-occur.

Table 13c. Summary of intentional stimulant-related poisoning hospitalizations in Canada, 2016 to 2021

| | | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|-------------------------------------|--|------|------|------|------|------|------|
| | Number | 649 | 699 | 696 | 703 | 730 | 685 |
| Total | Crude rate | 2.3 | 2.5 | 2.4 | 2.4 | 2.5 | 2.3 |
| | Age adjusted rate | 2.3 | 2.5 | 2.4 | 2.4 | 2.5 | 2.4 |
| Davaget by say | Male | 46% | 49% | 43% | 44% | 39% | 39% |
| Percent by sex | Female | 54% | 51% | 57% | 56% | 61% | 61% |
| | 0 to 19 | 25% | 24% | 27% | 28% | 30% | 37% |
| | 20 to 29 | 30% | 29% | 27% | 27% | 25% | 25% |
| Percent by | 30 to 39 | 21% | 20% | 21% | 18% | 21% | 17% |

Not available (n/a) Data were not available.

Q1 = January to March; Q2 = April to June; Q3 = July to September; Q4 = October to December

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for Canada by year may not match those from other tables, as they do not include the suppressed numbers in provinces/territories, in order to comply with privacy and confidentiality rules.

Table 16. Sex distribution of accidental stimulant-related poisoning hospitalizations by province or territory, 2016 to 2021

| Province | 20 | 16 | 20 | 17 | 20 | 18 | 20 | 19 | 20 | 20 | 20 | 21 |

Suppressed (Suppr.) Data may be suppressed in provinces or territories with low numbers of cases in order to comply with

privacy and confidentiality rules.

Not available (n/a) Data were not available.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Does not include cases with missing age. Totals used to calculate Canada proportions do not include the suppressed numbers, in order to comply with privacy and confidentiality rules.

Table 18a. Number of total stimulant-related poisoning hospitalizations in Canada, sex by age group, 2016 to 2021

| Sex by | 2016 | | 2017 | | 2018 | | 20 | 19 | 202 | 20 | 2021 | |
|------------|--------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| age group | Female | Male |
| 0 to 19 | 156 | 117 | 179 | 135 | 186 | 114 | 207 | 135 | 234 | 127 | 261 | 121 |
| 20 to 29 | 233 | 363 | 241 | 411 | 262 | 432 | 227 | 365 | 227 | 389 | 209 | 348 |
| 30 to 39 | 143 | 301 | 184 | 395 | 207 | 430 | 187 | 371 | 244 | 453 | 227 | 366 |
| 40 to 49 | 114 | 181 | 112 | 245 | 146 | 219 | 102 | 205 | 145 | 280 | 143 | 315 |
| 50 to 59 | 78 | 120 | 84 | 141 | 91 | 179 | 93 | 166 | 74 | 198 | 76 | 173 |
| 60 or more | 33 | 45 | 38 | 68 | 43 | 64 | 56 | 64 | 44 | 98 | 36 | 107 |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Refer to <u>Technical notes</u> for more information.

Table 18b. Number of intentional stimulant-related poisoning hospitalizations in Canada, sex by age group, 2016 to 2021

| Sex by | 2016 | | 2017 | | 2018 | | 2019 | | 202 | 20 | 2021 | |
|------------|--------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| age group | Female | Male |
| 0 to 19 | 113 | 48 | 112 | 57 | 137 | 54 | 146 | 54 | 167 | 53 | 205 | 48 |
| 20 to 29 | 103 | 91 | 105 | 98 | 106 | 81 | 93 | 94 | 105 | 79 | 90 | 81 |
| 30 to 39 | 56 | 79 | 60 | 82 | 62 | 82 | 65 | 63 | 80 | 71 | 56 | 63 |
| 40 to 49 | 41 | 41 | 42 | 60 | 53 | 38 | 38 | 44 | 48 | 45 | 35 | 43 |
| 50 to 59 | 31 | 29 | 27 | 33 | 20 | 31 | 32 | 41 | 31 | 21 | 18 | 21 |
| 60 or more | 8 | 8 | 10 | 12 | 16 | 16 | 21 | 12 | 13 | 15 | 10 | 12 |

Suppressed (Suppr.)

Data may be suppressed in provinces or territories with low numbers of cases in order to comply with privacy and confidentiality rules.

Note(s):

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Refer to $\underline{\text{Technical notes}}$ for more information.

Table 18c. Number of accidental stimulant-related poisoning hospitalizations, sex by age group, 2016 to 2021

| Sex by | 2016 | | 2017 | | 2018 | | 2019 | | 2020 | | 2021 | |
|------------|--------|------|--------|------|--------|------|--------|------|--------|------|--------|------|
| age group | Female | Male |
| 0 to 19 | 30 | 54 | 48 | 61 | 35 | 40 | 50 | 66 | 53 | 63 | 49 | 62 |
| 20 to 29 | 97 | 200 | 101 | 237 | 108 | 284 | 99 | 219 | 100 | 260 | 93 | 219 |
| 30 to 39 | 66 | 175 | 88 | 237 | 112 | 276 | 105 | 238 | 123 | 304 | 137 | 240 |
| 40 to 49 | 55 | 100 | 53 | 146 | 73 | 144 | 51 | 119 | 80 | 194 | 86 | 218 |
| 50 to 59 | 40 | 71 | 43 | 78 | 58 | 111 | 47 | 93 | 38 | 144 | 48 | 123 |
| 60 or more | 22 | 30 | 21 | 42 | 22 | 42 | 26 | 38 | 27 | 69 | 22 | 82 |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Totals for sex by age group may not match those from other tables as they do not include cases with missing sex, other sex or missing age.

Table 19. Percentage of accidental stimulant-related poisoning hospitalizations by substances involved, in Canada, 2016 to 2021

| | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|---|------|-------|-------|-------|-------|-------|
| Total number | 940 | 1,156 | 1,305 | 1,151 | 1,456 | 1,381 |
| Percent involving cocaine | 55% | 57% | 59% | 54% | 58% | 56% |
| Percent involving other psychostimulants (excl. cocaine) | 59% | 56% | 53% | 59% | 57% | 58% |
| Percent involving co-occurring non-stimulant poisonings | 65% | 63% | 67% | 61% | 66% | 67% |
| Percent involving co-occurring opioid poisonings (including fentanyl or fentanyl analogues) | 45% | 47% | 49% | 43% | 49% | 53% |
| Percent involving co-occurring fentanyl or fentanyl analogues poisoning | n/a | n/a | 16% | 20% | 26% | 32% |
| Percent involving co-occurring non-stimulant/non-opioid poisonings | 39% | 34% | 36% | 33% | 34% | 33% |

Data on hospitalizations from Quebec are not included in the dataset used for analysis. As a result, Quebec is excluded.

Stimulant-related poisoning hospitalizations involving cocaine and other psychostimulants may exceed 100% as poisonings may co-occur.

Data on opioid-related and stimulant-related poisoning hospitalizations are not mutually exclusive. A proportion of poisoning hospitalizations involving a stimulant also involved an opioid. Adding up those numbers would result in an overestimation of the burden of opioids and stimulants.

The ICD-10-CA code for poisoning by fentanyl and derivatives was introduced April 2018. Fentanyl-specific data were not available prior to this date
