

Groundfish

Groundfish move north and deeper to find colder water

CLIMATE CHANGE affects species living at the SEAFLOOR

Some groundfish and shrimp stocks have declined since the 1950s

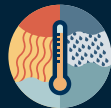

To protect them, Canada monitors these important species

When necessary, fishery catches are reduced or limited to certain areas

FISHERIES
MANAGEMENT ACTIONS
Maintaining sustainable fisheries

MONITORING

climate

ecosystem

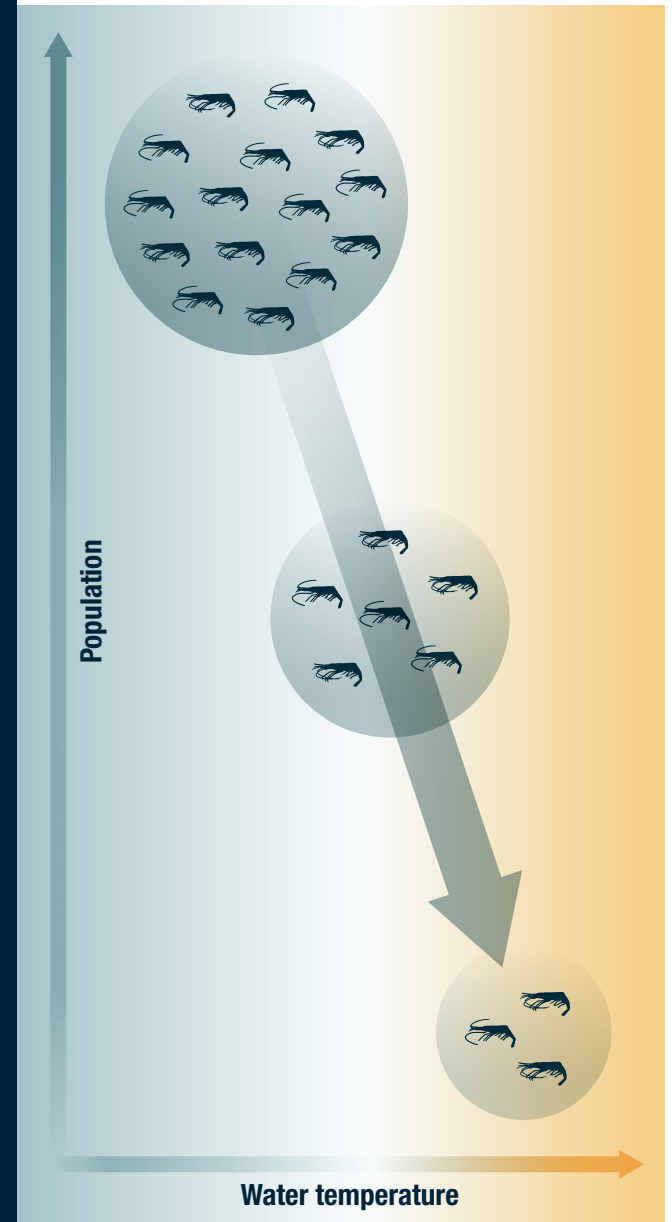

ocean

Shrimp

Abundance of smooth pink shrimp (*Pandalus jordanii*) declines as water temperature rises
