FIRST NATIONS ENVIRONMENTAL CONTAMINANTS PROGRAM FOR COMMUNITIES AND ORGANIZATIONS SOUTH OF 60TH PARALLEL

Proposal submission deadline:

The proposal package must be received by Indigenous Services Canada no later than 11:59 p.m., Mountain Time, **November 5th, 2021**.

Proposals may be submitted electronically via email at SAC.FNECP-PPNPE.ISC@CANADA.CA before the deadline.

Alternatively, a hard-copy proposal submission may be sent via Canada Post, courier, or fax. Please note that proposals that are submitted exclusively by courier or Canada Post must be postmarked by **November 5th, 2021**.

Please send completed proposals to:

First Nations Environmental Contaminants Program
Environmental Public Health Division
Office of Population and Public Health
Population Health and Primary Care Directorate
First Nations and Inuit Health Branch
Indigenous Services Canada
A.L. 1919D
10 Wellington Street, Suite 1455,
Gatineau, QC, K1A 0H4

Fax Submissions can be sent to: 613-952-8639

TABLE OF CONTENTS

- 1. What is the First Nations Environmental Contaminants Program?1
- 2. Who can apply for funding?..... 2
- 3. What are the areas of primary concern?..... 3
- 4. How do I submit a proposal?..... 4
- 5. Who can I contact for more information?..... 5
- 6. How are eligible proposals evaluated?..... 6
 - Mandatory Criteria 6
 - Science Peer Review 7
 - Community-Based Merit Review 9
- 7. Proposal Template12
- Annexes:..... 23
 - 1. Sample consent form 23
 - 2. Suggestion for developing your project evaluation 25

IMPORTANT: This Call for Proposals has been revised so please read through it carefully as there have been many changes regarding the funding stream, length of agreements, amounts of funding, etc.

1

WHAT IS THE FIRST NATIONS ENVIRONMENTAL CONTAMINANTS PROGRAM?

Indigenous Services Canada's First Nations Environmental Contaminants Program (FNECP) is helping First Nations improve their health and wellbeing by supporting their capacity to identify, investigate and characterize the potential impact of exposure to environmental hazards through community-based monitoring, research, risk assessment and risk communication.

Chemical surveillance and monitoring enable First Nations communities and First Nations organizations south of 60° parallel to gather timely and accurate information to identify and define the potential for and actual human exposures to environmental hazards. This information provides First Nations leaders with an early indication of key contaminant concerns in their community, traditional territory or traditional lands across Canada, creating a foundation for risk mitigation actions.

FOR THE 2022/2023 SUBMISSION

1. Primary research proposals should:

1. Focus on a single issue of concern
2. Focus on an environmental hazard identification, investigation and characterization
3. Collect sufficient information on **both the level(s) of the environmental contaminant(s) of concern** in different media (food, water, soil or air) and **the human exposure routes** (dietary surveys and water consumption surveys for ingestion, frequency of recreational water exposure (e.g., swimming) for dermal contact/inhalation, frequency and duration that people spend at home for radon exposure assessment, etc.)
4. Be achievable within two years

Selected research proposals can receive up to **\$125,000 per project** in funding **over two years** (April 2022 to March 2024).

2. Knowledge integration proposals

Secondary research that integrates existing scientific data and community-based knowledge sources on risk assessment and risk communication of chemical, biological and radiological exposure in First Nations communities may

be supported. This funding stream can be used to support knowledge integration about an environmental public health issue or hazard of concern. In this scenario, it could be submitted prior to and in preparation for submitting a primary research proposal in the next funding period, should the knowledge integration demonstrate the need.

3. Risk communication proposals

This funding stream can be used for extensive and sophisticated risk communication of the results of previously completed primary research to increase First Nations' awareness of the new knowledge and its implications for human health.

Selected knowledge integration and risk communication proposals can receive up to **\$25,000 per project** in funding **over one year** (April 2022 to March 2023).

IMPORTANT:

1. Knowledge integration and risk communication proposals **cannot be combined** with a primary research proposal.
2. Only **one proposal per First Nation** will be accepted.
3. No more than **two proposals from the same Principal Investigator/Research team** will be accepted.
4. FNECP funded projects that are still in progress **cannot apply for new/additional funding for the same project** until its conclusion and the report of the analysis and results of the project has been submitted and approved by the FNECP.

2

WHO CAN **APPLY FOR FUNDING?**

1. First Nations communities (on-reserve) and First Nations organizations south of 60° parallel in Alberta, Saskatchewan, Manitoba, Ontario, Québec and Atlantic Canada¹.
2. Bands, Districts, Tribal Councils and Associations, Councils, governments of self-governing First Nation communities and regions.
3. Non-government and voluntary associations and organizations, including non-profit corporations that work on behalf of or in partnership with entities detailed in 1) and/or 2).

IMPORTANT:

1. The FNECP program requires that:
 - Primary research projects be carried out in partnership with **academically trained scientists (a PhD or MSc-level) with a track record of peer-reviewed publications in the field of the proposed project**
 - Knowledge integration projects be carried out in partnership with a project lead with **at least a Bachelor's degree in environmental sciences, health sciences or education**
 - Risk communication projects be carried out in partnership with **academically trained experts (at least a MSc or BSc-level) with proven experience in conducting risk communication in the field of the proposed project**
2. The scientific/academic partner(s) must be identified in the proposal.

¹ First Nations in British Columbia should apply for funding under the First Nations Health Authority Environmental Contaminants Program. First Nations north of 60° parallel, Metis and Inuit communities/organisations should apply for funding under the Northern Contaminants Program.

3

WHAT ARE THE AREAS OF PRIMARY CONCERN?

1. Chemical hazards

Below is the list of contaminants that are included as focus areas for the First Nations Environmental Contaminants Program (FNECP). Other environmental contaminants of potential health concern to First Nations communities (not outlined here) may be a part of research projects under the FNECP if there is documented evidence or peer-reviewed literature of these substances being a hazard to human health:

- Persistent organic pollutants monitored under the Stockholm Convention on Persistent Organic Pollutants (2004-2020).
 - Aldrin
 - Chlordane
 - Chlordecone
 - Dieldrin
 - Dicofol
 - Decabromodiphenyl ether (Commercial mixture, c-DecaBDE)
 - Endrin
 - Heptachlor
 - Hexabromobiphenyl (HBB)
 - Hexabromodiphenyl ether and heptabromodiphenyl ether (c-decaBDE)
 - Hexabromocyclododecane (HBCD or HBCDD)
 - Hexachlorobenzene (HCB)
 - Hexachlorobutadiene (HCBd)
 - Alpha hexachlorocyclohexane (A-HCH)
 - Beta hexachlorocyclohexane- (B-HCH)
 - Lindane
 - Mirex
 - Pentachlorobenzene
 - Pentachlorophenol and its salts and esters
 - Polychlorinated naphthalene
 - Polychlorinated biphenyls (PCB)
 - Technical endosulfan and its related isomers
 - Tetrabromodiphenyl ether and pentabromodiphenyl ether (commercial pentabromodiphenyl ether)
 - Toxaphene
 - DDT
 - Perfluorooctane sulfonic acid (PFOS) and, its salts and perfluorooctane sulfonyl fluoride (PFOSF)
 - Perfluorooctanoic acid (PFOA), its salts and PFOA-related compounds
 - Polychlorinated dibenzo-p-dioxins (PCDD)
 - Polychlorinated dibenzofurans (PCDF)
 - Short-chain chlorinated paraffins (SCCPs)
- Heavy metals monitored under the Convention on Long-range Transboundary Air Pollution Protocol on Heavy Metals (1998-2012) (cadmium, lead and mercury) as well as arsenic.
- Agricultural chemicals such as pesticides, herbicides, insecticides, fungicides, rodenticides, algicides, and fertilizers
- Pharmaceutical residues in drinking and surface water as well as in traditional/country/local foods
- Toxins such as aflatoxins, mycotoxins, marine biotoxins (in shellfish)

2. Biological hazards specifically in traditional/country/local foods

Escherichia coli	Campylobacter jejuni	Bacillus cereus	Parasites
Salmonella	Listeria	Pseudomonas	Viruses
Clostridium botulinum	Coliforms	Fungi	Prions
Clostridium perfringens	Staphylococcus	Moulds	

3. Radiological Hazards (radon - a radioactive, colourless, odourless gas occurring naturally as an indirect decay product of uranium or thorium).

IMPORTANT: Primary research projects focusing on radon exposure assessment and monitoring should provide **a letter of support from the Director of Housing** supporting the project and expressing a commitment to request and provide funds for radon remediation in homes with radon levels exceeding the Health Canada radon guideline (200Bq/m²).

TO NOTE: The FNECP program generally does not accept drinking water quality research proposals because drinking water quality is monitored systematically and on an ongoing basis in all First Nations communities by First Nations communities and Indigenous Services Canada. Only very novel and/or innovative state-of-the-art research project proposals that aim to contribute to the publishable body of knowledge, which cannot be achieved through the systematic surveillance, might be considered.

4

HOW DO I SUBMIT A PROPOSAL?

- **Please adhere to the following format:**

- Proposal should not exceed 20 single-sided pages, plus cover page, appendices and resumes/CVs.
- Proposal must be provided in English or French.
- Proposal must be submitted in size 12 font formatted for 8.5" x 11" size paper.
- Proposal needs to be post-dated before the deadline.

Complete proposals (electronic or hard copy) must be received by Indigenous Services Canada no later than 11:59 pm Mountain Time, November 5th, 2021

Proposals may be submitted electronically via email before this deadline. Alternatively, a hard-copy submission may be sent via Canada Post, courier, or fax. Please note that proposals that are submitted exclusively by courier or Canada Post must be postmarked by the submission deadline. Proposals arriving after the deadline will not be eligible for consideration.

Successful applicants will be notified of the funding decisions by **March 1st, 2022**.

Electronic submissions can be sent to:
SAC.FNECP-PPNPE.ISC@CANADA.CA

Fax Submissions can be sent to 613-952-8639

Hard/paper-copy submissions can be sent to:
First Nations Environmental Contaminants Program
Environmental Public Health Division
Office of Population and Public Health
Population Health and Primary Care Directorate
First Nations and Inuit Health Branch
Indigenous Services Canada
A.L. 1919D
10 Wellington Street, Suite 1455,
Gatineau, QC, K1A 0H4

IMPORTANT: The Funding Recipient shall provide the Minister with sixty (60) days to review any reports submitted under this Agreement which contain environmental analysis, findings or recommendations prior to any release of such reports, or disclosure of any of their findings, to the media or the public.

5

WHO CAN I CONTACT FOR MORE INFORMATION?

For more information on the First Nations Environmental Contaminants Program, including funding eligibility and project ideas, or to submit a proposal, please contact

SAC.FNECP-PPNPE.ISC@CANADA.CA

or call (613) 293-5517

6

HOW ARE ELIGIBLE PROPOSALS EVALUATED?

This program involves a competitive selection process. As a result, not all eligible proposals that meet mandatory criteria will receive funding.

Proposals that pass **Mandatory Criteria Review** (MCR) will move on to **the Science Peer Review** (SPR) followed by **the Community-Based Merit Review** (CBMR). Scores from both the SPR and CBMR will be tallied and the highest-ranking proposals will be funded up to the maximum of available program funding.

The following are the steps involved in the review process:

A) MANDATORY CRITERIA

Indigenous Services Canada's role is to assess the merit of the proposal against the criteria provided below. **All criteria below must be met** in order for proposals to move onto the next step in the evaluation process (e.g., Science Peer Review)

- Request for funding per proposal for a primary research project **must not exceed \$125,000** over two years (April 2022 to March 2024). Knowledge integration and Risk communication proposals **must not exceed \$25,000** per project over one year (April 2022 to March 2023)
- Projects **must be community-based** (First Nations are the lead on the project)
- The lead of **the primary research project must** partner with **a PhD or MSc-level scientist(s)** who has a strong background in **chemical/biological/radiological exposure assessment, and/or human biomonitoring² and a track record of peer-reviewed publications in the field of the proposed project**
- The lead of **the knowledge integration project must have at least a Bachelor's degree in environmental sciences, health sciences or education.**
- The lead of **the risk communication project must** have or partner with **an academically trained expert(s) (at least a MSc or BSc-level) with proven experience** in conducting risk communication in the field of the proposed project
- Project outcomes **must be linked** to the human health impacts or mitigating human health impacts on community members (e.g. use results to develop recommendations for health promotion and disease prevention or to support mitigation measures, such as radon remediation. This requirement applies to the primary research, knowledge integration, and risk communication streams.
- Primary research project proposals **must include conventional methodologies recommended by Health Canada that assess human exposure and body burden of contaminants^{3,4}** through an appropriate combination of the following (knowledge integration/risk communication projects are exempt):
 - Sampling of traditional foods, water, indoor air or soil (soil sampling **must not** pertain to a site risk assessment)

IN COMBINATION WITH

- An appropriate **human health exposure assessment methodology** that would enable the examination of a **link between environmental exposure and human health**. For example, human exposure assessments focused on traditional foods would require dietary surveys through the administration of a 24-hour dietary recall and/or a Food Frequency Questionnaire, or biomonitoring where appropriate

² Method of assessing human exposure to chemicals by measuring the chemicals (or their metabolites) in human tissues or specimens, such as blood or urine. (CDC 2005)

³ <https://www.canada.ca/en/health-canada/services/environmental-workplace-health/reports-publications/contaminated-sites.html>

⁴ <https://www.canada.ca/en/services/health/publications/healthy-living.html#a2.5>

- The Community, through its representatives **must** be involved in the project design development and all stages of the research project
- Project **must include** the integration of local and/or traditional knowledge
- A project that has **previously received funding** from the First Nations Environmental Contaminants Program **must include a summary of the analysis and results from the previous project(s)** and, if appropriate, **needs to demonstrate how the new proposal builds on previous project results**
- Project proposal **must demonstrate** how it will report on the implementation and results of the project
- Project proposal **must state which accredited laboratory** will be used to analyze samples (knowledge integration/risk communication projects are exempt)
- Projects partnering with other nearby First Nations communities will be given more points than proposals that do not partner with other communities
- Project proposal **must include a Band Council Resolution** for the community that is applying for the funding and/or **a letter of support** from the organization that is submitting the proposal. If two or more communities participate in the research project, the partnering community(s) **must** provide a letter of support(s) acknowledging the partnership
- Project proposal that suggest/plan potential mitigation measures in case any hazards are identified will be given extra points (knowledge integration/risk communication projects are exempt)
- Projects seeking additional funding from external/other sources **must provide a letter of commitment from the funding organisation(s)**
- Primary research projects focusing on radon exposure assessment and monitoring should provide **a letter of support from the Director of Housing** supporting the project and expressing a commitment to request and provide funds for radon remediation in homes with radon levels exceeding the Health Canada radon guideline (200bq/m2).
- Project proposal **must include all elements** outlined in “PROPOSAL TEMPLATE”

B) SCIENCE PEER REVIEW

If the proposal passes Mandatory Criteria Review, it will then undergo an external Science Peer Review, which will cover the suitability of project design, project team expertise, sound methodology, timeframe, budget, etc.

The Science Peer reviewers will use the following criteria to evaluate each eligible proposal.

TABLE 1: CRITERIA USED BY SCIENCE PEER REVIEWERS TO EVALUATE A PRIMARY RESEARCH PROJECT PROPOSAL

DESCRIPTION	RATING
Scientific excellence/expertise of principal investigator and team: <ul style="list-style-type: none"> • Relevant academic credentials • Relevant experience/expertise/knowledge • Relevant publication track 	/20 /20 /10
Methodology: <ul style="list-style-type: none"> • Clarity and scope of objectives • Clarity, adequacy and sound methodology • Suitability of proposal design for meeting the objectives 	/20 /20 /20
Does the proposal include a review of existing literature on key topics of the proposal?	/10
Does the proposal include a knowledge translation plan?	/20
Achievable within the appropriate timeframe (two years)?	/10
Appropriateness of budget (professional fee and services, community consultations, cost of lab analyses/equipment, stationery, community support (salary and honoraria), travel-associated expenses, etc.)	/25
Overall clarity and organization of a proposal	/25
TOTAL	/200

TABLE 2: CRITERIA USED BY SCIENCE PEER REVIEWERS TO EVALUATE A KNOWLEDGE INTEGRATION OR RISK COMMUNICATION PROPOSAL

DESCRIPTION	RATING
Scientific excellence/expertise of principal investigator and team: <ul style="list-style-type: none"> Relevant academic credentials Relevant experience/expertise/knowledge 	/25 /25
Methodology: <ul style="list-style-type: none"> Clarity on the objectives, topic and scope of a knowledge integration/risk communication proposal Clarity on search strategy and literature selection criteria 	/30 /30
Does the proposal include a knowledge translation plan?	/20
Achievable within the appropriate timeframe (one year)?	/10
Appropriateness of budget (professional fees and services, community support (salary/scholarship/honoraria), stationery, travel-associated expenses, etc.)	/30
Overall clarity and organization of a proposal	/30
TOTAL	/200

C) COMMUNITY-BASED MERIT REVIEW

Once the Science Peer Review is completed, a First Nations-led Selection Committee who have a strong background in environmental monitoring and First Nations' health and community issues, will review and assess aspects in the proposal that include community involvement, strengthening capacity, training, traditional knowledge, etc.

The Selection Committee uses the following criteria to evaluate each eligible proposal.

TABLE 3: CRITERIA USED BY THE SELECTION COMMITTEE TO EVALUATE A PRIMARY RESEARCH PROPOSAL

DESCRIPTION	RATING
Does the project team include: <ul style="list-style-type: none"> community-based researcher(s) and community member(s), and principal investigator(s)/project leader with recognized skills and relevant expertise? 	/20 /20
Does the project engage community members with different types of knowledge expertise? This could include: <ul style="list-style-type: none"> fishers, hunters and trappers environmental specialists health practitioners community planners/coordinators youth, Elders, women 	/5 /5 /5 /5 /5
Does the project demonstrate a rigorous approach to community engagement? <ul style="list-style-type: none"> Does the project strengthen capacity in First Nations communities? Does the project involve the community in the research project design development? Does the project provide local training opportunities for First Nations involved? Does the project include the hiring and engagement of community members? Does the project support engagement of youth? Are there any beneficial activities for youth (e.g. learning new skills, knowledge acquired)? 	/10 /10 /10 /10 /10
Has Traditional Knowledge been integrated into the research? <ul style="list-style-type: none"> Are Traditional Knowledge Holders (e.g. Elders) engaged throughout all project stages (project development, sample collection, data analysis, communication of results, etc.)? Are there plans to communicate and incorporate Traditional Knowledge into the project results? 	/15 /10
Does the proposal include well thought out plans for communicating with the community during the project and sharing research results with the community when it is completed? <ul style="list-style-type: none"> Will the project activities and results be communicated to the community throughout all project stages? Will the results be communicated/disseminated to other interested parties and decision-makers (e.g. funding organizations, other First Nation communities, governments, etc.)? Are there plans to communicate the results regionally, nationally or internationally (e.g., conferences)? Are communications activities well budgeted in their proposal? 	/10 /10 /5
Is the time frame for completion of the project feasible?	/10
Are the budget and resource requirements realistic and appropriate to the project (professional fee services, community consultations, cost of lab analyses/equipment and facilities, stationery, community support (salary and honoraria), travel-associated expenses, etc.)?	/10
Has co-funding been sought with partners?	/10
Does the proposal suggest/plan potential mitigation measures in case any hazards have been identified?	/20
Is there another community that is partnering with the head proponent?	/25
TOTAL	/240

TABLE 4: CRITERIA USED BY THE SELECTION COMMITTEE TO EVALUATE A KNOWLEDGE INTEGRATION/RISK COMMUNICATION PROPOSAL

DESCRIPTION	RATING
Does the project team include: <ul style="list-style-type: none"> community-based researcher(s) and community member(s), and principal investigator(s)/project leader with recognized skills and relevant expertise? 	/20 /20
Does the project engage different forms of expertise? This could include environmental specialists, fishers, hunters and trappers, health practitioners, community planners, youth, Elders, women, etc.	/25
Does the project demonstrate a rigorous approach to community engagement? <ul style="list-style-type: none"> Does the project involve the community in the project implementation? Does the project support engagement of youth? Are there any beneficial activities for youth (e.g., learning new skills, knowledge acquired)? Does the project include the hiring and engagement of community members? 	/20 /20 /20
Has Traditional Knowledge been integrated into the research? <ul style="list-style-type: none"> Are Traditional Knowledge Holders (e.g., Elders) engaged in the project? 	/20
Does the proposal include well thought out plans for communicating with the community during the project and sharing research results with the community when it is completed? <ul style="list-style-type: none"> Will the project activities and results be communicated to the community? Will the results be communicated/disseminated to other interested parties and decision-makers (e.g. funding organizations, other First Nation communities, governments, etc.)? Are there plans to communicate the results regionally, nationally or internationally (e.g., conferences, workshops, publications in peer-reviewed journals)? Are communications activities well budgeted in their proposal? 	/10 /10 /10 /10
Is the time frame for completion of the project feasible?	/10
Are the budget and resource requirements realistic and appropriate to the project (professional fee services, community consultations, cost of lab analyses/equipment and facilities, stationery, community support (salary and honoraria), travel-associated expenses, etc.)?	/10
Has co-funding been sought with partners?	/10
Is there another community that is partnering with the lead proponent?	/25
TOTAL	/240

Once proposals have been evaluated, they will be ranked, and funding recommendations will be communicated to the FNECP Secretariat of the EPHD, FNIHB.

7

PROPOSAL TEMPLATE

(IN PREPARING YOUR PROPOSAL, PLEASE USE THE LIST OF TIPS AND QUESTIONS PROVIDED IN EACH SECTION BELOW)

PROPOSAL ELEMENT CHECKLIST:

- Cover page
- Plain language summary (maximum 1 page)
- Table of contents
- Community background (maximum 2 pages)
- Project description:
 - Introduction (including literature review)
 - Rationale
 - Objectives
 - Methodology (including data collection and data management)
 - for the knowledge integration/risk communication proposals: search strategy and literature selection criteria)
 - Activities/Outcomes
 - Strengthening capacity
 - Traditional knowledge
 - Youth
- Workplan and timelines
- Project Team/Partners
- Communication and/or dissemination plan
- Project evaluation
- Budget
- Research Ethics Review (as conducted by academic partner's REB) (knowledge integration/risk communication projects are exempt)
- Letter(s) of support from a mandated authority
- Band Council Resolution
- References
- Appendices (any relevant project materials, such as questionnaires, laboratory quotes, consent forms, etc.)
- Resumes/CVs for each scientific project team member and the community project manager/lead/coordinator

PLAIN LANGUAGE SUMMARY

(MAXIMUM 1 PAGE)

- Give an overview or a story that explains what you want to research.
 - Introduce the question(s) that the project will answer.
 - Why is this important to your community?
 - How is this project linked to environmental contaminants?
 - How is this project linking environmental contaminants to the health of community members?
 - How will the anticipated results of the project help your community?
- What activities are you proposing to do to answer these questions?
 - Who will be involved (e.g. youth, males, females, hunters, etc.)?
 - Where and when will the project work be done?
- What are the expected outcomes or results of the project?
- How can the information from this project be useful to others?

TO NOTE: The Research proposal needs to demonstrate a strong link between **environmental contaminants** and **the health of First Nations**. This link needs to be evident throughout your proposal.

AND

It needs to be clear throughout the proposal **that this project is driven by the community** in the hopes that the outcomes will benefit that community.

TABLE OF CONTENTS

Create a table of contents with page numbers. This is a list that includes all the major sections in your proposal. The sections should be the ones in the column to the left.

COMMUNITY BACKGROUND

(MAXIMUM 2 PAGES)

This is the opportunity to share information about the community and why this project is important. Please include the following information in this section:

- A. Some information on the history of your community (e.g. population information, main activities of community members, history of the presence of environmental contaminants, etc.).
- B. Explain what makes your community vulnerable to environmental contaminants (e.g. past and present industrial activities, dependence on country foods, pesticide use, etc.).
- C. How does your community's vulnerability to environmental contaminants impact health issues in your community (e.g. food safety, access to safe drinking well water, altered lifestyles/cultural activities, etc.)?
- D. Are environmental contaminants and their effects on health an issue for particular members of your community (e.g. Elders, women, children, etc.)?

□ PROJECT DESCRIPTION

INTRODUCTION

- Describe the project (purpose, scope, type).
- Provide a **literature review** that summarizes any previous research on your topic (maximum one-two pages) with references). If no information exists, please indicate this. Describe any other similar projects that have been undertaken in First Nations communities. Please cite these studies.
- Describe how your project will build on previous research/projects or answer a new question that has not yet been answered or considered.
- Indicate if this project is a continuation of any other community research project including the names of any partners and funders. **Include a summary of the analysis and results.**

RATIONALE

- How have environmental contaminants affected the health of your community and/or how might they affect your community in the future?
- Have steps been undertaken in the past to understand or solve this issue? If so, what were they, and were they effective? Why or why not?
- How will your community benefit from this project?
- How will the outcomes of the research be of direct or indirect relevance for other First Nations communities?

OBJECTIVES

Objectives are planned outcomes that outline what you intend to achieve through your project in the short and long term. Objectives are measurable and time-sensitive so that they can be evaluated and adjusted if necessary.

- What are your short-term objectives for this project?
- What are your long-term objectives for this project?

Develop a few simple objectives for your proposed research. Ask yourselves “What do we want to accomplish with this research?” and “Can we do this throughout this one- or two-year project?” Make sure that your sentences use active verbs. Restrict yourselves to a maximum of 5 objectives. You must be able to measure your progress towards your objectives during the research. Your objectives should also help you select your methodologies, and form a guide to your data analysis and presentation of results.

An example of a short-term objective for a research proposal:

“Determine the quantity and frequency of traditional foods consumed by community members over the prior year”.

METHODOLOGY AND DATA COLLECTION

1. Primary research project proposal

Describe how you will accomplish the **research activities** outlined in the work plan (e.g. data collection methods including population sampling strategies, community consultations, analyses of results, etc.). Data can include any of the following: interview transcripts, water samples, plant samples, animal samples, photos, videos, etc. Please identify the activity number for each activity.

- Where will the work be conducted?
- How will the data be collected, analyzed, interpreted, disseminated and stored?
 - Where and when will sampling take place?
 - Who will participate in the study (e.g. youth, males, females, hunters, etc.)? What sampling method will be used? How many people will be selected?
 - How many samples of water, sediments and types of plants, mammals or fish will be collected? What tissues of animals will be selected?
 - Who will analyze the data and interpret the results?
 - How will the data be protected and shared throughout the research project?
 - Who will own the data?
 - Who will be able to access the data?
 - Who will have control over the data?
 - How will the First Nations' principles of Ownership, Control, Access and Possession (OCAP) be respected?
 - If your community has an existing protocol, please include details.
 - Which accredited laboratory will you use to analyze your samples for contaminants?

Please see examples of conventional methodologies that may be used in the study. You can include any, or a combination of the following:

- Fish, mammals, plants, water, and/or sediment sampling along with sampling protocol pertaining to also assessing the extent of the community members' exposure to the sampled media.
- Hair, blood, urine, and/or breast milk sampling along with sampling protocol
- Administration of a 24-hour dietary recall or a Food Frequency Questionnaire to the same individuals as those who supplied hair, blood, urine or breast milk samples
- Administration of semi-structured interviews to the same individuals as those who supplied hair, blood, urine or breast milk samples.
- Creation of a seasonal or "harvest" calendar to capture information such as harvesting periods, species, and locations of the harvest to show month-to-month variations and constraints potentially linked to environmental contamination. This calendar can also include information related to pesticide application, snowmelt, storms, industrial production peak, etc.
- Examination of secondary health data such as hospitalization records, nursing station records, etc.
- Collect information on perceptions about the research issue or to capture local histories related to your research topic.

2. Knowledge integration/Risk communication proposals

- Describe the scope of work
- Provide details on search strategy and types of knowledge (e.g., published, verbal communications, interviews, surveys, community reports, etc.) and the type of publications selected (e.g., peer-reviewed journal articles, books, government documents, etc.)
- List knowledge integration methods and other search tools (e.g., databases) that will be part of the project and/or will be consulted to find relevant sources
- Describe inclusion/exclusion criteria for the selection of literature
- Outline the planned report structure for a knowledge integration/risk communication project

ACTIVITIES/OUTCOMES

- Describe the research activities that will take place during your research project. Be sure to describe how each activity is connected to your project objectives.
- State the expected results and project deliverables (e.g. reports, publications, conferences/workshops, communication initiatives and/or materials such as newsletters, pamphlets, plain-language summary, videos, etc.).
- Please state if you plan to develop consumption recommendations from the results.

Activities are more specific and detailed statements than your objectives. You can have many activities for each one of your objectives.

Please see activities to reach the objective previously given as an example (for a research proposal only):

“Determine the quantity and frequency of traditional foods consumed by community members over the prior year” could be, for example:

Activity 1: “Using the Band Council list, randomly select 40 individuals of different age and gender groups to participate in the research”.

Activity 2: “Inform selected participants about the project and seek their written consent”.

Activity 3: “Administer a food frequency questionnaire to these participants”.

STRENGTHENING CAPACITY

- Explain how your project will **provide/engage your community with new tools/knowledge/methods** to increase the ability to better understand and manage the health impacts of environmental contaminants.
- Provide detailed information on how this project will **support community members’ engagement** in research. Will any local training be involved?

TRADITIONAL KNOWLEDGE

- The integration of traditional knowledge is a key component in research. Explain how your project will incorporate and protect traditional knowledge and culture.

YOUTH

- The FNECP strongly encourages the **engagement of youth** in projects. Please provide details as to how youth will be involved. Give examples of planned activities and how they can or will be beneficial (e.g. new skills and knowledge acquired).

☐ COMMUNICATION AND/OR DISSEMINATION PLAN

- Describe in detail how the results will be communicated to the community throughout the project (e.g. Facebook, newsletter, a community bulletin, etc.).
- Describe how the results will be communicated or disseminated to other interested parties and decision-makers (e.g. funding organizations, other First Nation communities, governments, etc.).
- Describe how the project's results will be communicated regionally, nationally or internationally.

IMPORTANT: Think of how you will report sampling results (e.g. hair, blood) to research participants. This should **protect the confidentiality** of individuals.

☐ PROJECT EVALUATION

- Indicate how the project will be evaluated and by whom. How will you determine the successes and lessons learned?
- For suggestions on how you might structure your evaluation please see the information at the end of this document *Suggestions for Developing Your Project Evaluation*.

☐ BUDGET

Provide a **detailed budget breakdown** for **core expenditures, administrative/management costs and funding/support from other sources for each year of the project**, as well as a total budget for the duration of the project. You should feel free to remove or add budget categories based on your own needs.

CORE EXPEDITURES

SALARIES AND WAGES:

Indicate the salaries paid to people specifically hired for the project, and the amount of time they will dedicate to the project (\$ per hour/day/week).

HONORARIA:

Honorarium compensation for participants (e.g. Elders) is a gratuitous payment as distinguished from compensation for service or hire and is often used as a way to thank them for their time and knowledge. *Honoraria should not be used as an alternative to a service contract or as a replacement for salary, wages or professional fees.*

PROFESSIONAL SERVICE FEES (IF APPROPRIATE):

Indicate the estimated total value of each contract to be awarded under the project, the contractor's name (if known), and the purpose of the contract. For any services provided by a community member (e.g. labourers, Elders), the community member should be identified in the proposal by name.

TRAVEL, ACCOMMODATIONS AND MEAL COSTS:

Include all travel, accommodations and meal costs, and indicate the purpose of travel. Please use government travel rates by visiting the Travel Directive of the Treasury Board of Canada Secretariat website, Appendix C—Meal & Incidental Rates (Canada/USA) (www.njc-cnm.gc.ca/directive/d10/v238/s659/en).

EQUIPMENT AND FACILITIES:

Equipment cost. Specify the type of equipment that is needed to conduct your project and the extent to which it will be used (e.g. camera, microphone, monitoring or sampling equipment).

TO NOTE: All equipment purchased with FNECP funding is to remain the sole property of the First Nations communities.

ADMINISTRATIVE/MANAGEMENT COSTS

The First Nations and Inuit Health Branch will allow **up to 10% of the total agreement amount** for administration costs.

OPERATING COSTS:

- Office materials and supplies, telephone, printing, computer time, fax, postage
- Supplies (including lab supplies)
- Publication costs (specify publisher and projected date of publication)
- Administration fees (if applicable)

OTHER COSTS

If any budget item does not fit into any of the above categories of expenditure, it must be entered as “**Other**” with a brief description.

BUDGET SUMMARY

Total funding requested from Indigenous Services Canada = \$

Total support from other sources, including in-kind = \$

The total cost of the project (Indigenous Services Canada request plus the support from other sources) = \$

IMPORTANT: The FNECP funding as well as funding from other sources have to be used exclusively for the objectives as per the proposal.

PLEASE COMPLETE YOUR BUDGET USING THE BUDGET TABLE PROVIDED BELOW.

Use a separate table for each year, and an additional table for the overview of all years.

TO NOTE: Indigenous Services Canada’s fiscal year runs from April 1st to March 31st. Please align your budget with these dates.

TABLE: PROJECT BUDGET

EXPENSE	DESCRIPTION	INDIGENOUS SERVICES CANADA FUNDING REQUEST	FUNDING FROM OTHER SOURCES (INCLUDING IN-KIND)	COMMENTS	ASSOCIATED ACTIVITY #
Core Expenditures					
Salary					
Salary					
Salary					
Honoraria					
Benefits					
Professional services					
Translation					
Training fees					
Transportation, accommodation and meals					
Equipment and facilities					
Laboratory expenses (detailed with cost per sample)					
Other					
Core Expenditures Subtotal 1					
Administrative/Management Costs (maximum 10% of total request from Indigenous Services Canada)					
Office materials/supplies					
Copier and photocopies					
Telephone and telecommunication					
Material and equipment rental					
Maintenance and repairs					
Postage, shipping and handling					
Accounting fees					
Human resources, pay-services					
Other					
Admin Subtotal 2					
Total Cost of Project (subtotal 1 plus subtotal 2)					

☐ RESEARCH ETHICS REVIEW

Every human health research project involving First Nations will be required to obtain an Approval Certificate from at least one **Ethics Review Board** or committee before receiving funding approval from the FNECP (e.g. University Research Ethics Board).

The Research Ethics Review does not need to be completed at the time of application but will be needed before funding can be provided. Your project team will be responsible for this part of the review.

☐ LETTER(S) OF SUPPORT FROM A MANDATED AUTHORITY

- Letter(s) of support by a mandated authority (Band Councils, hunters and trappers organizations, hamlet councils, municipalities, First Nations organization, etc.) for **each community involved in your project** should be included in your submission. The letter(s) should be on official letterhead and be signed by an authorized person.
- All funded projects are required to provide a **Band Council Resolution** from the community leading the project.
- Successful projects might be asked to provide certification documentation for their organization (e.g. letter of incorporation, registration number, bylaw, audited financial statements etc.). It is therefore recommended that applicants keep these files nearby in case the project is funded. Communities are encouraged to communicate with their appropriate authorities/community representatives to obtain any approvals needed for their proposed research.

☐ REFERENCES

Include reference to any documents, publications, or third party information that you used in writing your proposal. This is a very important part of your proposal as it shows that your research would build on existing knowledge.

☐ APPENDICES

This could include the following:

- Relevant background information (if available).
- Relevant project materials that you may have ready such as interview questions, questionnaires, laboratory quotes, consent forms (sample to follow), etc.

☐ RESUMES/CV FOR EACH PROJECT TEAM MEMBER

- Resumes or CVs are required to show that the person conducting the research, and the research team members, have the knowledge and skills required to successfully run this research project.
- **All scientific project team members and the community project manager/lead/coordinator** must provide their resumes or CVs along with a list of relevant publications

SAMPLE CONSENT FORM

Name of project:

Project start/end date:

Purpose of
Project:

Name of Interviewee:

Name of Interviewer(s):

Place: _____ Date: _____

I, _____, hereby agree to give my consent and involvement in the **(state the name of your project)**.

1) The participants are informed that:

- i. This is an invitation for you to participate in this study.
 1. You have a right to choose to not participate at any time.
 2. You have the right to not answer any questions that you are not comfortable with, before the interview has even started or during the interview.
 3. The data/information collected is going to be permanently stored by **(state who will store the data and who will have access to it)**.
- ii. The interview recordings, whether they are audio, video, written or photographic, and the resulting translations, and/or transcriptions and/or images will be used for the following purposes: **(list the purposes)**
 - 1.
 - 2.
 - 3.

SAMPLE CONSENT FORM

(Name your organization or community) will not use the interview recordings, whether they are audio, video, written or photographic, and the resulting translations and/or transcriptions and/or images, for any other purposes without the consent of the interviewee.

Participant Name (Print Name)

Date

Participant Signature

Date

Witness Signature

Date

(Name of organization or community) agrees to use the information according to the terms outlined above.

Signature of Interviewer

SUGGESTIONS FOR DEVELOPING YOUR PROJECT EVALUATION

(NOT MANDATORY BUT VERY USEFUL)

EVALUATION TECHNIQUES

Below please find some evaluation techniques you might want to include as part of your project evaluation:

ACTIVITY LOGS: Track regular activities and provide a running account of what happened. These can provide anecdotal information that is not usually captured in more formal surveys or consultations. Keeping an activity log is a great tool to assist in writing reports, providing regular updates on initiatives, and providing valuable qualitative data to evaluations.

SURVEYS: Surveys consist of a series of closed or open-ended questions. They can be done by hand, on-line, over the telephone, through email or face-to-face. Surveys are easy to administer; however, developing questions that are easy to understand and measure can be difficult. Plan to test out survey questions on colleagues and members of your target audience ahead of time so you can modify them accordingly.

INTERVIEWS: An interview is a conversation between two or more people where questions are asked by the interviewer to obtain information from the interviewee. Interviews can be done over the telephone, on the radio or face-to-face.

FOCUS GROUPS: Focus groups provide opportunities for an in-depth engagement. Traditionally they consist of between 6 to 10 participants with a particular interest, involvement or stake in the subject being discussed. During focus groups, a facilitator leads the group through a series of questions with a recorder summarizing the discussions.

COMMUNITY ENGAGEMENT: Community engagement brings together interested people for information and discussion of an issue. Community engagement is open to the public and can attract either a small or a large group based on the level of interest in the issue being discussed. During community engagement, presentations are given followed by a facilitated discussion.

AUDITS: An audit is a form of evaluation that assesses an organization, system, process, project or product. It can consist of simple inventories (e.g. how many community freezers are in a community) or be more detailed such as the assessment of how many community members have access to safe drinking water. An audit can be performed at the beginning of a project to provide a baseline for future measurements. By doing this you are able to track changes, modify activities and determine their impact.
