CANADA
DOMINION BUREAU OF STATISTICS
MINING, METALLURGICAL AND CHEMICAL BRANCH

Vol. 4

No. 1

MONTHLY REPORT

OF

COAL STATISTICS FOR
CANADA

January 1925

Published by Authority of the Hon Thos A. Low, M.P.,
Minister of Trade and Commerce

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1925

LIST OF PUBLICATIONS

PREPARED IN THE

MINING, METALLURGICAL AND CHEMICAL BRANCH DOMINION BUREAU OF STATISTICS

(1) Mineral Production (Mining and Metallurgy).

General Reports—

- (a) Annual Report of the Mineral Production of Canada.
- (b) Preliminary Reports (semi-annual) of the Mineral Production of Canada.

Coal—

- (a) Annual Report of Coal Statistics for Canada.
- (b) Monthly Report of Coal Statistics for Canada.

In addition to the foregoing reports on mineral production a series of annual bulletins is in preparation each of which will contain statistics relative to a particular metal or non-metallic mineral or to a special section of the mineral industry, and the series when complete will cover every phase of mineral production in Canada.

(2) Statistics of Manufactures, based chiefly on minerals.

Summary reports on the sections of manufactures covered by the Mining, Metallurgical and Chemical Branch are issued as follows:—

Annual—

- (a) **Iron and Steel and Their Products:** Pig Iron and Ferro-Alloys—Steel and Rolled Products—Castings and Forgings—Agricultural Implements—Boilers and Engines—Machinery—Automobiles—Automobile Accessories—Bicycles—Railway Rolling Stock—Wire and Wire Goods—Sheet Metal Products—Hardware and Tools—Miscellaneous Iron and Steel Products.
- (b) **Manufactures of Non-Ferrous Metals:** Aluminium Ware—Brass and Copper Products—Lead, Tin and Zinc Products—Manufactures of the Precious Metals—Electrical Apparatus and Supplies—Miscellaneous Non-Ferrous Metal Goods.
- (c) **Manufactures of the Non-Metallic Minerals:** Aerated Waters—Asbestos and Allied Products—Cement Products and Sand-Lime Brick—Coke and By-Products—Glass (blown, cut, ornamental, etc.)—Illuminating and Fuel Gas—Monumental and Ornamental Stone—Petroleum Products.
- (d) **Chemicals and Allied Products:** Coal Tar and its Products—Acids, Alkalies, Salts and Compressed Gases—Explosives, Ammunition, Fireworks and Matches—Fertilizers—Medicinal and Pharmaceutical Preparations—Paints, Pigments and Varnishes—Soaps, Washing Compounds and Toilet Preparations—Inks, Dyes and Colours—Wood Distillates and Extracts—Miscellaneous Chemical Industries.

Monthly—

- (a) **Production of Iron and Steel in Canada.**

In addition to the foregoing printed summary reports, a series of bulletins is being prepared, each of which deals with a particular phase of manufactures.

(3) Special Reports.

- (a) Report on the Consumption of Prepared Non-Metallic Minerals in Canada.
- (b) Report on the Consumption of Mine and Mill Materials in Canada.

DOMINION BUREAU OF STATISTICS

R. H. COATS, B.A., F.S.S., Hon. F.R.S.C., Dominion Statistician.

S. J. COOK, B.A., A.I.C., F.C.I.C., Chief of the Mining, Metallurgical and Chemical Branch.

COAL STATISTICS FOR CANADA

JANUARY 1925

The output of coal from Canadian mines during January dropped 3 per cent below the production for the preceding month and 3 per cent below the average for January in the past five years. The figures were 1,481,776 tons in January as against 1,520,024 tons in December, while compared with the average for the month during the five preceding years, the decrease was 33,924 tons.

Production by provinces in January, when compared with the five-year average for the month, showed increases in New Brunswick and Saskatchewan and decreases in Nova Scotia, Alberta, British Columbia, and Canada.

Comparison of January and December figures covering the total importation of coal from the United States and Great Britain showed a decrease of 16 per cent. January imports amounted to 1,166,782 tons while in December, 1,391,778 tons was brought in. January importations this year were 8 per cent lower than the five-year average for the month. During January 24,272 tons was imported from Great Britain.

Imports of anthracite for January totalled 356,172 tons. This was 42,937 tons below the quantity imported in December, and about 5 per cent above the five-year average for the month. Anthracite imported from the United States amounted to 331,900 tons, while 24,272 tons came from Great Britain. Classified by grades, 343,000 tons was of egg, grate, stove, etc., sizes, and the balance 13,172 tons of buckwheat and rice sizes. Of the total anthracite imported during January, 256,171 tons was entered through the ports of Ontario; 4,385 tons through Manitoba; 12 tons through ports of Saskatchewan; and the balance through the ports of eastern Canada.

Exports of Canadian coal for the month of January were 6 per cent lower than in December, 1924. The quantities were: January, 85,410 tons, and December, 90,126 tons. Comparison of the January exports with the preceding five-year average showed a decrease of 55 per cent. Exports from the eastern provinces amounted to 45,105 tons, a decrease of 20,496 tons below December; those from the western provinces amounted to 40,305 tons, an increase of 15,780 tons above December, 1924.

Computed from figures on output, imports and exports, the quantity of coal made available for consumption decreased 10 per cent below the figures for the previous month. During January the total was 2,563,148 tons as against 2,821,676 tons made available during the month of December, 1924. In comparison with the five-year average for the month, the January available tonnage was lower by 1 per cent.

The number of men employed in the coal mines of Canada during January was 30,700 of whom 23,787 worked underground and 6,913 on surface, as compared with a total of 30,959 in December, 1924 of whom 23,966 worked underground, and 6,993 on surface. Production per man was 48.3 tons for January, as against 48.6 tons per man for December; during January the production per many-day was 2.6 tons, being the same as in the previous month. The tonnage lost (Table No. 5), was largely due to "lack of orders" in January.

Due to the adoption of a new classification of coal districts in Alberta, based on geological formations as worked out by the Scientific and Industrial Research Council of that province, comparable data for the five-year average in Table 7 were not available in time for inclusion in this month's issue.

EXPLANATORY NOTES ON THE TABLES

Output—

The output of coal from each district or county is shown for the current month, and the average output from each district for the same month in the five years 1920-1924 has been computed as a basis for comparison. The total output during the calendar year to date and the average output during the corresponding period of the five years, 1920-1924, are also tabulated. The percentage relations between the corresponding items are shown.

Imports—

Imports of anthracite and bituminous coal are given separately for each Customs port of entry and for each province, the data showing the quantity imported during the current month, and for comparison the average quantity imported during the same month of the five years 1920-1924. The total importations of each kind of coal during the calendar year to date, and during the corresponding period of the five years 1920-1924, are also given; the percentage relations between these data have been computed. With regard to the table of imports it is to be noted that the data given are not comparable with the imports statistics published in the "Monthly Reports of the Trade of Canada". The quantity of coal shown as imported represents the total amount of coal from the United States arriving at each port during the month. There is thus included some coal which has not been cleared from Customs while the "Monthly Reports of the Trade of Canada" show only the quantity of coal actually cleared from Customs for consumption in Canada. It often happens that large quantities of bituminous coal are brought into Canada but are not cleared from Customs until required for use owing to the fact that there is a duty of 52 cents a ton collected on all bituminous coal, round, and oval sizes imported.

Exports—

Exports of Canadian coal by ports of exit are given. These data do not show the province of origin but only the port of exit. Coal mined in one province is sometimes shipped from another province, a notable instance being that the bulk of coal exported from the province of Alberta is shipped through the Customs ports of Fernie and Cranbrook in British Columbia.

Coal Made Available for Consumption in Canada—

In Table No. 2 the total quantities of coal mined in each month have been added to the total quantities imported. From this aggregate there has been deducted the quantity of Canadian coal exported during the month. The amount remaining is the tonnage of coal made available for consumption during each of the months reported.

Tonnage Lost—

A plan has been worked out by the Bureau which is now being applied in every coal-producing province, and the following outline of the procedure is given in order that the reader may clearly understand how the data in Table 5 were obtained.

For each month the actual output and the actual number of days' work done by all employees on the colliery pay-rolls are determined and from these two figures the output per man-day is deduced. The number of individual shifts lost by the men whose names are on the colliery pay-roll for the month is recorded, and the total number of shifts so lost is multiplied by the actual tonnage produced per man-day during the month. This lost tonnage plus the actual output of the mine during the month is regarded as the possible output and the percentages given in Table 5 showing the proportions produced and lost, are computed from these figures. The tonnage lost is thus analyzed according to the cause of loss and the percentage figures are included in the tables.

Table 1.—Summary of the Principal Coal Statistics for Canada
(Short Tons)

	(1) Month of January 1925	(2) Month of December 1924	(3) 5-year average for Month 1920-24	(4) Calendar year to date 1925	(5) 5-year average for period 1920-24	Per cent of (1) to (2)	Per cent of (1) to (3)	Per cent of (4) to (5)
