

Trends in pre-Exposure prophylaxis (PrEP) use in nine Canadian provinces, 2018 - 2021

Prevalence of PrEP use (per 100,000) by age group in 2021

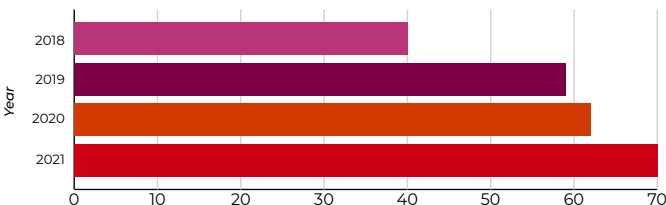

PrEP use was highest among those aged **30-39 years**

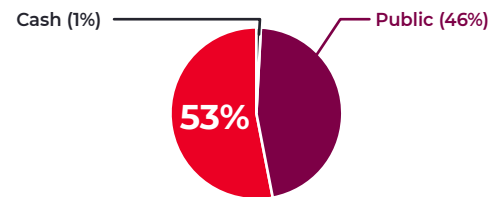

70% of PrEP prescriptions were prescribed by primary care physicians in 2021

Annual prevalence of PrEP use (per 100,000), Canada (9 provinces)

PrEP use in Canada has **increased** overall, and among both males and females. However, PrEP is used primarily by males (98% of people on PrEP in 2021)

Half of PrEP prescriptions were paid for by private insurance in 2021

Date Sources: *British Columbia:* Annual estimates of persons using PrEP in British Columbia were provided by the BC Centre for Excellence in HIV/AIDS
All other provinces: Annual estimates of persons using PrEP in Canada were generated from IQVIA's geographical prescription monitor dataset
 Data for the three territories and Alberta are not currently available and therefore have not been presented.
