FOREWORD

Canada's railway network is the third largest in the world and carries the fourth largest freight volume. The *Canadian Railway Suppliers Directory* provides the first, consolidated, Canada-wide list of companies manufacturing passenger and freight equipment and those providing services to the railway industry. Canadian railway suppliers play a vital role in ensuring the continuing strength of Canadian railways, and are increasingly important in the growth of both North American and international railways. This directory is intended to help expand awareness of Canada's railway supply capabilities as well as to assist you in making contact with these companies.

Canadian railway suppliers provide a wide range of products and services — locomotives, freight and passenger cars, specialty equipment, rail and track equipment, guidance and signaling systems, and a variety of railway-related services. As North American and international railways undergo massive structural and technological change, new and challenging opportunities emerge for equipment and service suppliers. In North America, both railway carriers and suppliers are increasingly operating on an integrated basis, as freer trade brings the Canadian, U.S. and Mexican markets closer together. Many Canadian companies are fully capable of meeting this challenge, and offer competitive, world-class products to their customers. As a result, Canada's share of the North American market is growing, and at the same time, Canadian companies are increasingly looking outward for opportunities to supply throughout the world. The Railway Association of Canada and the Canadian Association of Railway Suppliers are cooperating closely to ensure that their members are informed on developments and issues crucial to the success of Canadian companies, which must compete in an increasingly competitive global market.

With the support of the associations, Industry Canada approached over three hundred companies located across Canada. The information that you will find in this directory has been provided by the companies themselves, and appears both in printed form and on Industry Canada's web site, *Strategis*, one of the largest government information web sites in the world. This directory has been distributed to Canadian high commissions, embassies and consulates as well as to members of both associations.

The *Canadian Railway Suppliers Directory* provides a brief profile for Canadian equipment and railway service suppliers. You will find information listed by company and by product. You are invited to contact the companies directly or to refer your inquiries to Industry Canada, Canada's delegations around the world or to the Canadian Association of Railway Suppliers.

Industry Canada intends to update the information in this directory on an ongoing basis. Should you wish additional information about the directory or wish to have your company included, please contact Kathie Wells by telephone: (613) 954-8336, facsimile: (613) 952-8088 or e-mail: wells.kathie@ic.gc.ca. You can access *Strategis* at <http://strategis.ic.gc.ca>.

Industry Canada has taken the utmost care in compiling the *Canadian Railway Suppliers Directory*; however, the department assumes no liability for the accuracy of the information in the directory or on the *Strategis* web site.

INDUSTRY ASSOCIATIONS

Canadian Association of Railway Suppliers

The Canadian Association of Railway Suppliers, incorporated in 1991, brings together companies that supply goods and services to the Canadian railways. There are currently 86 members.

As an advocacy group, the Association promotes the well-being of the rail mode within Canada and, with it, the viability of both the railway companies and their suppliers. These efforts are often synchronized to parallel efforts undertaken by the Canadian railways themselves. A newsletter keeps members informed of industry developments and Association activities.

Railway Association of Canada

The Railway Association of Canada (RAC) is an industry association that represents the 48 freight and passenger railways operating in Canada today. The RAC provides support services to its members and public information, education and advocacy on their behalf.

The Association facilitates Canada's role in establishing North America-wide railway technical and operating standards, and makes representations on matters of common interest to government, courts, boards and commissions. Originally established as the Canadian Railway War Board in 1917 to maximize cooperation between the railway in the war effort, the RAC was created in 1919 and incorporated in 1953. The RAC functions with a Board of Directors, general and technical committees, and a small professional staff.
