**CANADIAN TELEVISION ALLOTMENTS & ASSIGNMENTS
WITH LIMITATIONS**

1. General Conventions

a) Offset Carrier Designators

Z, zero offset from nominal video carrier frequency.

+, nominal video carrier frequency plus 10 kHz.

-, nominal video carrier frequency minus 10 kHz.

b) A limited allotment L (n) is one on which a station is required to operate for any reason with less than standard parameters (n = reference number of the limitation).

c) Channel Classification

Each channel is identified by a channel classification code, as specified below:

A = UHF allotment with maximum parameters of 10 kW ERP and 100m EHAAT.

B = UHF allotment with maximum parameters of 100 kW ERP and 150m EHAAT.

C = UHF allotment with maximum parameters of 1000 kW ERP and 300m EHAAT.

D = UHF assignment operating with greater than Class C parameters.

R = Regular VHF allotment where the ERP does not exceed standard parameters.

S = VHF assignment whose ERP is greater than standard parameters and is located outside of the Canada/USA coordination zone.

d) Numerical designation of television channels

<u>VHF</u>	<u>Channel No.</u>	<u>Frequency Band (Megahertz)</u>
	2	54-60
	3	60-66
	4	66-72
	5	76-82
	6	82-88
	7	174-180
	8	180-186
	9	186-192
	10	192-198
	11	198-204
	12	204-210
	13	210-216

<u>UHF</u>	<u>Channel No.</u>	<u>Frequency Band (Megahertz)</u>	<u>Channel No.</u>	<u>Frequency Band (Megahertz)</u>
	14	470-476	42	638-644
	15	476-482	43	644-650
	16	482-488	44	650-656
	17	488-494	45	656-662
	18	494-500	46	662-668
	19	500-506	47	668-674

	40	626-632	68	794-800
	41	632-638	69	800-806

2. Special Constraints

2.1 Certain constraints exist resulting from the image frequency response of television receivers and the re-allocation of the 806-890 MHz band to the land mobile service. These constraints are due to the fact that older television receivers are designed to receive channels 70 to 83, and therefore are susceptible to potential image interference especially to channels 62 to 69 from base stations in the land mobile service on former TV channels 70-83. Present day TV receivers restrict the tuning range to 806 MHz (channel 69), thereby eliminating these constraints. In the context of this allotment plan and due to the considerations above, the introduction of base station operations in the land mobile service will generally be phased to allow the satisfactory reception of television channels, and leads to the following temporary constraints:

2.1.1 Generally, channels 62 to 69 will be assigned last.

2.1.2 Assignment of the following channels may be delayed until such time as improved television receivers with reception limited to channel 69, come into general use:

<u>Channel</u>	<u>Location</u>
63	Toronto, Ont.
64	St. Thomas, Ont. Belleville, Ont. Sorel, Que.
66	Lac Megantic, Que. Sackville, N.B.

2.2 Certain constraints also exist to enable the harmonious operation of channels 14 and 69 and land mobile operations in the immediately adjacent bands below channel 14 and above 69, within the same coverage area. These result in restrictions to the deployment of land mobile base stations in the adjacent bands and necessitate the use of extra filtering of spurious emissions from TV transmitters on channels 14 and 69. In the context of this plan, this consideration leads to two specific constraints - Channel 14 will be assigned last for any future requirements and additional spurious emission suppression will be required for the following allotments:

<u>Channel</u>	<u>Location</u>
14	Ottawa-Hull, Ont. Sherbrooke, Que.
69	Belleville, Ont. Sorel, Que.
