Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of the series reflects the broad interests and policies of Fisheries and Oceans Canada, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et politiques de Pêches et Océans Canada, notamment la gestion des pêches, la technologie et le développement, les sciences océaniques et l'environnement aquatique, au Canada.

Le titre exact figure au haut du résumé de chaque rapport. Les rapports à l'industrie sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement d'origine dont le nom figure sur la couverture et la page du titre.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

ABSTRACT

Ouellet, M., and Gagnon, D. 2023. Coastal temperature monitoring program from 2020 to 2021: southern Gulf of St. Lawrence. *Can. Data Rep. Fish. Aquat. Sci.* 1375: vii + 468 p.

Bottom and surface water temperatures were monitored in coastal waters of the southern Gulf of St. Lawrence using electronic recording devices attached to navigational buoys or moorings and set to record every two hours mostly from April to December. The data collected are presented as the mean daily temperature and monthly-accumulated degree-days for each sampled station.

Key words: water temperature, environmental parameter, marine environment, oceanography.

RÉSUMÉ

Ouellet, M., and Gagnon, D. 2023. Coastal temperature monitoring program from 2020 to 2021: southern Gulf of St. Lawrence. *Can. Data Rep. Fish. Aquat. Sci.* 1375: vii + 468 p.

Les températures de l'eau de fond et de surface dans les eaux côtières du sud du golfe du Saint-Laurent ont fait l'objet d'un relevé avec des enregistreurs électroniques de températures attachés aux bouées d'aide à la navigation ou à des stations d'amarrage fixes. Les températures étaient enregistrées toutes les deux heures principalement d'avril à décembre. Les données recueillies sont présentées dans une série de tableaux et figures sous la forme de températures moyennes journalières, de degrés jours mensuels pour chaque station.

Mots clés : température de l'eau, paramètre environnemental, environnement marin, océanographie.

1.0 INTRODUCTION

In 1995, a coastal temperature monitoring program was initiated by the Lobster Section (now the Crustaceans Section) of the Department of Fisheries and Oceans (DFO) in Moncton, New Brunswick (N.B.). The objective of the program is to gather coastal environmental data to better understand fluctuations in water temperature and their effect on coastal marine species. Data will benefit oceanographers and other research scientists interested in water temperature regimes.

Water temperature data were collected from coastal waters in N.B., Prince Edward Island (P.E.I.) and the Gulf shore of Nova Scotia (N.S.). Data collected before 2020 are available in Lanteigne et al. (1996), Savoie et al. (2002), Savoie and Lanteigne (2002), Savoie and Comeau (2004), Paulin et al. (2005), Paulin and Gagnon (2008), Paulin et al. (2011), Paulin et al. (2014), Giard et al. (2017), Ouellet et al. (2019) and Ouellet and Gagnon (2021). Data collected between 2020 and 2021 from the coastal temperature monitoring stations across the southern Gulf of St. Lawrence (sGSL) are presented in this report.

2.0 MATERIALS AND METHODS

Programmable temperature recorders, Vemco Minilog-II-T data loggers™ were used to record the water temperature at all sites throughout the coastal temperature monitoring program. Each temperature recorder was initialized to record a water temperature reading every two hours. The range of the data logger is -30 to +35°C with an accuracy of $\pm 0.1^\circ\text{C}$ and a resolution of 0.01°C .

In 2021, a transition began to phase out Vemco Minilog-II-T data loggers™. A total of nine Starmon mini from Star Oddi were deployed at six sites in 2021 including: Anse Bleue, Cheticamp, Margaree, Nine Miles Creek, Pugwash and Wallace. Each temperature recorder was initialized to record a water temperature reading every two hours. The temperature range of these data loggers is between -2 to +40°C, with an accuracy of $\pm 0.025^\circ\text{C}$ and a resolution of 0.001°C .

The deployment of temperature probes across the southern gulf of St. Lawrence is a joint effort between the Canadian Coast Guard (CCG), harvesters, fisherman associations, and the Department of Fisheries and Oceans (DFO). The majority of temperature recorders are deployed by CCG, which are mounted in a steel protective housing unit, as described in Savoie et al. (2002), and attached to the mooring system of navigational buoys at approximately one meter from the sea floor. In addition, navigational buoys at Shippagan N.B., Escuminac N.B., Malpeque P.E.I. and Pleasant Bay N.S. are fitted with an additional temperature recorder at approximately two meters from the surface. Temperature recorders deployed by harvesters are set approximately one meter from the seafloor on independent mooring systems consisting of an anchor, anchor line and buoy (Dobson and Petrie 1985). DFO divers deploy temperature recorders in Anse Bleue, N.B. on the Louis P shipwreck, placing one at 12 m, 18 m and 24 m (Anse Bleue 1, Anse Bleue 2 and Anse Bleue 3, respectively). The Gulf of Nova Scotia Fleet planning board deploys temperature recorders in May that are left until October, their setup consist of two anchors linked by a rope, where the temperature recorder is tied. Opportunistically, in conjunction with the American Lobster Settlement Index monitoring program (Wahle et al. 2009), temperature recorders are also attached to bio-collectors and sit approximately 0.25 m from the seafloor bottom. These bio-collectors remain undisturbed for approximately 15 weeks from May to October at seven sites around PEI (Alberton, Covehead, Egmont Bay, Fortune, Murray Harbour, Nine Mile Creek and Skinners Pond) and one site in Nova Scotia (Wallace).

In 2020 and 2021, the majority of the temperature recorders were deployed by the Canadian Coast Guard (CCG) on navigational buoys in the sGSL (2020: 37 deployed, 32 recovered; 2021: 33 deployed, 21 recovered). Additional temperature recorders were deployed by DFO scientific staff and harvesters (2020: 13 deployed, 13 recovered; 2021: 26 deployed, 21 recovered).

The deployment of the temperature recorders by the CCG and harvesters occurred in early spring (i.e. April - May), depending on the ice conditions in the sGSL, with retrieval in the late fall of the same year (i.e. November - December). The temperature recorders on the bio-collectors were deployed late June to early

July and retrieved end of September to early October. Once recovered, the temperature recorders were brought to DFO where the data was downloaded, formatted and added to the database. The water depths of the CCG monitoring stations were provided by the CCG while the geographic positions (latitude and longitude) were taken from the Atlantic Coast List of Lights, Buoys and Fog Signals (CCG 2013). DFO personnel or harvesters recorded the latitude and longitude with the depth of water when deploying their respective temperature recorders.

In 2020 and 2021, 10% (5/50) and 29% (17/59), respectively, of the temperature recorders were not recovered. These losses were attributed to equipment failures such as a shackle, chain or cotter pin breaking off from the mooring system of the navigational buoy. In addition, some of the moorings set by harvesters or DFO personnel went missing due to environmentally related events or gear failures such as the rope or buoy breaking off.

A portable reader was used to download and save the data in a Microsoft Excel spreadsheet. All of the temperature data were verified for irregularities. Additional information such as serial number, location, coordinates, depth and date were also included in the files. The data from complete soak days were considered for analysis, as, generally, the day that the data logger is set or retrieved contains temperature values for only part of the day. The complete soak day files were imported into a Microsoft ACCESS database where sub-routines have been created to analyze and tabulate the final results.

3.0 DATA PRESENTATION

The monitoring station locations are presented in Figures 1 and 2, for 2020 and 2021, respectively. The positions and water depth for each temperature monitoring station are presented in Tables 1 and 2 for 2020 and 2021, respectively. The complete data sets are presented in Appendices A and B for 2020 and 2021, respectively. Tabulated results in the appendices for each site include daily mean temperatures, standard deviations, daily minimum and maximum temperatures and accumulated degree-days (ADD) relative to 0°C (i.e., the physical reference point of when freshwater freezes) and 4°C (i.e., the general physiological reference point below which coastal marine organisms in the sGSL are typically latent). The ADD is calculated daily and accumulated on a monthly basis. One yearly graph is presented for each location showing the daily mean temperatures and the water depth (surface or bottom) of the temperature recorder (Appendix A, B). Analysis presented in tables and graphs are presented for bottom water temperatures and the surface water temperatures (where available).

The accumulated degree-days (*ADD*) were calculated using the following equation:

$$ADD = \sum (T - T_{ref}) \times Time$$

Where T = mean daily temperature
 T_{ref} = reference temperature (0°C and 4°C)
 $Time$ = time period in days

When $T < T_{ref}$, $T - T_{ref} = 0$.

4.0 ACKNOWLEDGEMENTS

The authors would like to thank Sterling Wright and his staff at the Canadian Coast Guard Base in Charlottetown for their support and ongoing help in the deployment and retrieval of the temperature recorders. Also, many thanks to all the harvesters who have volunteered their time and material to prepare and deploy some of the moorings.
