Manuscript Reports

These reports contain scientific and technical information that represents an important contribution to existing knowledge but which for some reason may not be appropriate for primary scientific (i.e. *Journal*) publication. They differ from Technical Reports in terms of subject scope and potential audience: Manuscript Reports deal primarily with national or regional problems and distribution is generally restricted to institutions or individuals located in particular regions of Canada. No restriction is placed on subject matter and the series reflects the broad interests and policies of the Fisheries and Marine Service, namely, fisheries management, technology and development, ocean sciences and aquatic environments relevant to Canada.

Manuscript Reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report will be abstracted by *Aquatic Sciences and Fisheries Abstracts* and will be indexed annually in the Service's index to scientific and technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 901-1425 were issued as Manuscript Reports of the Fisheries Research Board of Canada. The series name was changed with report number 1426.

Details on the availability of Manuscript Reports in hard copy may be obtained from the issuing establishment indicated on the front cover.

Service des pêches et des sciences de la mer

Manuscrits

Ces rapports contiennent des renseignements scientifiques et techniques qui constituent une contribution importante aux connaissances actuelles mais qui, pour une raison ou pour une autre, ne semblent pas appropriés pour la publication dans un journal scientifique. Ils se distinguent des Rapports techniques par la portée du sujet et le lecteur visé; en effet, ils s'attachent principalement à des problèmes d'ordre national ou régional et la distribution en est généralement limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du Service des pêches et de la mer, notamment gestion des pêches; techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les Manuscrits peuvent être considérés comme des publications complètes. Le titre exact paraît au haut du résumé de chaque rapport, qui sera publié dans la revue *Aquatic Sciences and Fisheries Abstracts* et qui figurera dans l'index annuel des publications scientifiques et techniques du Service.

Les numéros de 1 à 900 de cette série ont été publiés à titre de manuscrits (Série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés en tant que manuscrits (Série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros allant de 901 à 1425 ont été publiés à titre de manuscrits de l'Office des recherches sur les pêcheries du Canada. Le nom de la série a été changé à partir du rapport numéro 1426.

La page couverture porte le nom de l'établissement auteur où l'on peut se procurer les rapports sous couverture cartonnée.

ABSTRACT

Hourston, A. S. 1977. Publications and reports on Pacific herring arising from investigations conducted at or in cooperation with the Pacific Biological Station. Fish. Mar. Serv. MS Rep. 1427: 21 p.

A chronological list of 286 publications and reports on Pacific herring was compiled from current records at the Pacific Biological Station at Nanaimo, B.C. It includes all reports (other than those of a confidential nature) of investigations on herring conducted by that station which are known to the author. Selected reports on closely related work carried out by other agencies, stations, and individuals in which the station had some involvement have also been included.

Key words: Publications; Reports; Pacific herring; list

RÉSUMÉ

Hourston, A. S. 1977. Publications and reports on Pacific herring arising from investigations conducted at or in cooperation with the Pacific Biological Station. Fish. Mar. Serv. MS Rep. 1427: 21 p.

L'auteur a établi une liste chronologique de 286 publications et rapports sur le hareng du Pacifique à partir des documents de la Station de biologie du Pacifique, située à Nanaimo (C.-B.). Il y énumère tous les rapports non confidentiels des études sur le hareng réalisées à la station, et qui lui étaient connus, ainsi que certains rapports de travaux connexes réalisés par d'autres organismes, d'autres stations ou des particuliers et auxquels a participé d'une façon ou d'une autre la station.

Mots clés: publications; rapports; hareng du Pacifique; liste
