C P. EDWARDS, Esq.,
Deputy Minister,
Department of Transport,
Ottawa, Ontario.

SIR—I have the honour to submit the Thirteenth Annual Report on Navigation Conditions on the Hudson Bay Route from the Atlantic Seaboard to the Port of Churchill. This report covers the season of navigation, 1941.

The report is compiled from information received from the Hudson's Bay Company Vessel R.M.S. *Nascopie*, the National Harbours Board, and the Meteorological and Radio Services of the Department of Transport.

Yours respectfully,

WALTER A. RUSH,

Controller of Radio.

DEPARTMENT OF TRANSPORT,
OTTAWA, February 28, 1942.

REPORTS

1. *Report on the Hudson Bay Route*—(Circular No. 100, 1941)

2. *Report on the Hudson Bay Route*—(Circular No. 101, 1941)

3. *Report on the Hudson Bay Route*—(Circular No. 102, 1941)

THIRTEENTH ANNUAL REPORT

Navigation Conditions on the Hudson Bay Route from the Atlantic Seaboard to the Port of Churchill Season of Navigation, 1941

Synopsis of Report

OPENING OF NAVIGATION

The change from winter conditions extended, as usual, over a period of several weeks and during that time the quantity and state of drifting ice varied from day to day according to the influence of winds and currents.

The dates of the final disappearance of ice from the vicinity of the reporting stations were as follows:—

Hudson Strait, East End

Resolution Island..... July 30

Hudson Strait, Central

Cape Hopes Advance. Station closed throughout season.

Hudson Strait, West End

Nottingham Island..... August 9

Hudson Strait, General—The R.M.S. *Nascopie*, working in the Straits from July 22 to August 5, reported the ice was open on the northern side of the Strait, but that heavy pack ice extended some 50 miles offshore along south side, at points from Hebron to Cape Smith. On August 26, eastward bound, reported heavy field ice in vicinity of Wolstenholme, but none elsewhere. The ice this year was exceptionally heavy.

Hudson Bay

Churchill..... July 1

Chesterfield Inlet..... July 12

Port Harrison..... July 21

CLOSE OF NAVIGATION

Hudson Bay

Chesterfield Inlet—Moderate amount of slob ice reported between October 25 and November 13. From November 14 to November 30, sea frozen to Shukpik and Fairway Islands.

Churchill—Ice first reported in Bay on October 28. Close packed ice to horizon reported throughout month of November except on November 13 and 23, when the entire ice body disappeared out to sea.

Hudson Strait

Nottingham Island—Drift ice reported October 31 and from time to time throughout month of November.

Cape Hopes Advance—Station closed throughout season.

Resolution Island—Ice reported in all directions to horizon on November 16, and loose ice on November 19. On November 26, no ice in sight. Bergs and growlers were fairly numerous throughout the season.

Full information regarding ice conditions will be found under Meteorological Reports, pages 12 to 36.

FOXE CHANNEL ICE

The R.M.S. *Nascopie* reported seeing no ice between Nottingham and Southampton Islands, August 5.

FOG

The number of days on which fog was reported were as follows:—

| Station | July | Aug. | Sept. | Oct. | Nov. |
|-------------------------|------|------|-------|------|------|
| Resolution Island..... | 2 | 13 | 2 | 0 | 1 |
| Nottingham Island..... | 12 | 11 | 5 | 0 | 1 |
| Churchill..... | 0 | 2 | 4 | 0 | 0 |
| Chesterfield Inlet..... | 2 | 0 | 1 | 0 | 0 |
| Port Harrison..... | 11 | 6 | 0 | 0 | 1 |

AIDS TO NAVIGATION

Radio

There are five radio direction finding stations on the Hudson Bay Route. Four were in operation during the whole year, the exception being Cape Hopes Advance station which remained closed during the season of 1941.

Detailed information regarding Radio Aids to Navigation will be found on page 42.

Hydrography

No additional charting or other operations were carried out during the past season. Publications of the Hydrographic Service, Department of Mines and Resources, relating to the Hudson Bay and Strait are listed on page 11.

Lights

There were no additions to the lights, the numbers remaining at two watched and ten unwatched, a total of twelve. A list of lights will be found on page 43.

Fog Signals

The explosive bomb signal which was installed at Resolution in 1935 is still in operation. It can be heard at a distance of between five and six miles and is fired at intervals of ten minutes on request by ships approaching Acadia Cove.

SHIPPING

Owing to war-time restrictions the movements of vessels using the Hudson Bay route were not reported.

No incident of note occurred during the season and navigation proceeded normally.

WALTER A. RUSH,

Controller of Radio.

R.M.S. *NASCQPIE*, CAPTAIN T. F. SMELLIE, MASTER,
VOYAGE TO HUDSON STRAIT AND BAY, 1941

Master's Report

GENERAL

Leaving Montreal on July 8, we passed through the Belle Isle Straits on the 12th instant. Numerous icebergs and growlers were in the vicinity while we passed through miles of open field ice. In order to avoid the close packed field ice on the Labrador, a course was set so that we would pass along the Labrador at a distance off of 50 miles. When in the latitude of Hebron, the course was altered for Hebron and we entered the heavy pack ice which took us two days to push through 50 miles.

We arrived in Hebron on the 16th instant and whilst discharging there the ice entered the harbour.

We left Hebron on the 18th and as soon as we were outside the harbour we entered the close heavy pack ice. Steaming eastward to get out of the ice it took us two days to find open water and then to shape our course Northwards. Resolution was reached on July 22, in open field ice. Staying off the Island only a couple of hours until the operators were exchanged by boat, we proceeded towards Lake Harbour. The ice was open on the North side of the Straits and good progress was made. We arrived at Lake Harbour on the 23rd. Leaving Lake Harbour on the 24th we had open water for 70 miles then we ran into the heavy pack ice. There was no passage between Charles Island and the mainland, so it was necessary to go round the North side of Charles Island and then to shape a course for Sugluk. Between the Island and Sugluk the ice was heavy and close packed. We reached Sugluk on the 27th and only left the ice when we entered the Harbour. After discharging was completed we were delayed by fog for 23 hours. The ice was again entered after leaving the harbour and it took us 33 hours to reach Wolstenholme, a distance of 60 miles.

Wolstenholme (Eric Cove) was full of heavy ice and it was necessary to move the ice to drop the anchor. Leaving Wolstenholme we steamed North through 50 miles of heavy ice and reached Cape Dorset on the 1st August. Dorset was free of ice.

Leaving Dorset for Southampton Island the weather was fine and no ice was seen until we rounded Salisbury Island. Here we met heavy open ice, and when approaching Nottingham Island the conditions were the same, so I decided to stop and land the Nottingham Island supplies which was done in two days.

No ice was seen between Nottingham and Southampton Islands, good progress was made and we reached Southampton Island on the 5th. Between Southampton Island and Cape Smith we ran into heavy ice 50 miles west of Cape Smith. Working through the ice we arrived at Cape Smith and anchored amongst the ice floes. After leaving Cape Smith we worked through 30 miles of heavy ice and then into open water. No further ice was sighted from this position to our arrival at Churchill.

The ice this year has been exceptionally heavy, otherwise everything went along satisfactorily.

After leaving Churchill we proceeded to Chesterfield and from there to Nottingham Island, where the gasoline and supplies loaded at Churchill were safely landed.

From Nottingham we proceeded to Wolstenholme, when we ran into very heavy field ice, which caused a little delay, and we arrived after darkness had set in.

From Wolstenholme we proceeded towards Lake Harbour, again passing through field ice before reaching there.

Cape Hopes Advance was our next stop. The depth of water was found to be too great for anchoring purposes, so while the motor boat took the party ashore, we cruised in the vicinity. After completing what was necessary we proceeded towards the mouth of the Koksoak River and anchored in very shoal water, with the beacons at the entrance of the river in sight. Later the post motor boat Koksoak came out, and the Government party went in to Chimo.

The "Nascopie" then hove up the anchor and we proceeded to Port Burwell. Burwell was reached the next morning. We cleaned up all the bunker coal at Burwell, which amounted to 60 tons, in five hours. Two days after bunkering was completed the Government party arrived from Chimo and we immediately sailed for Resolution Island.

Resolution Island is wrongly named—it should be Resolution Islands. For a single screw steamer of the "Nascopie" size, the passage between the islands requires a considerable amount of skill on the part of the navigator. A strong current sets directly across the entrance and should only be attempted at slack water and fine weather. After passing through the islands a sharp left turn is necessary to clear a submerged rock to the anchorage. The anchorage is good.

After completing discharge of supplies we had to await a suitable opportunity to leave, which occurred at 9 a.m. the morning after discharging was completed.

R.M.S. *NASCOPIE*, CAPTAIN T. F. SMELLIE, *MASTER*
HUDSON BAY AND STRAIT, 1941

Churchill: S.S. *Drakepool* anchored with stern moored to lower mooring buoy

Hydrographic Information

The Hydrographic and Map Service, Surveys and Engineering Branch, Department of Mines and Resources, publish a series of navigation charts and also a volume of Sailing Directions covering the Hudson Bay Route from the Atlantic entrance of Hudson Strait to Churchill. These are kept up to date and added to from time to time as new information becomes available.

The "Tide Tables for the Atlantic Coast of Canada," published by the Tidal and Current Survey Division of the same Service, contain predictions for the port of Churchill and for Moosonee in James Bay. Tables in leaflet form are available for Port Nelson. Tidal differences for twelve localities in Hudson Strait and for seven localities in James Bay afford the times of high and low waters in these areas. The time of the turn of the tidal streams in the southern offing of Resolution and Nottingham Islands, and information on the currents in Digges Sound is also given. The automatic tide gauge is kept in operation each season at Churchill for the extension of the tidal records by which the predictions are improved.

C.G.S. *N. B. McLEAN*—HUDSON STRAIT PATROL SHIP
GENERAL DIMENSIONS AND EQUIPMENT

The C.G.S. *N. B. McLean* is a twin-screw ice breaking steamer of 6,500 indicated horse-power and with the following leading dimensions:—

| | |
|-----------------------------|------------|
| Length (B.P.) | 260 feet |
| Breadth (moulded) | 60 " |
| Depth (moulded) | 31 " |
| Gross tonnage | 3,253 tons |
| Fuel oil capacity | 1,596 " |

The vessel is equipped with a patent towing winch furnished with both steel wire and manila towing hawsers, a powerful searchlight, two 7-ton derricks and two motor launches.

She also carries a diver and complete diving apparatus and the following salvage gear:—

- 1 Drake centrifugal pump, 10 inch.
- 1 Smart Turner centrifugal pump, 8 inch.
- 1 Duplex pump, 6 inch.

These pumps are completely equipped with flexible suction and discharge pipes, foot valves, siphons, etc., and all necessary auxiliaries.

One hundred and fifty feet of bronze flexible steam hose with connections, patching gear, shores, turnbuckles and all necessary tools are also provided.

The vessel is provided with a gyro compass and a recording echo sounder and radiotelegraph and radiotelephone apparatus are installed.

The *N. B. McLean* is normally in Hudson Strait from the opening to the close of navigation each year and maintains constant watch on 500 K/cs. (600 metres), call sign C.G.S.N.

GLOSSARY OF TERMS USED IN ICE NAVIGATION

- Floe.....A large mass of floating ice.
- Pan.....A small floe or piece of ice that can be forced aside or slewed.
- A field.....A large body of ice that may be seen around.
- Land floe.....Ice frozen fast to the shore.
- Packed ice.....Small pieces of ice closed together and held by the pressure of ice and currents.
- Ice blink.....A peculiar pale yellow reflection on the sky indicating the presence of ice in the distance.
- The ice pack.....A large body of solid ice extending across the whole sea and through which it is impossible to advance.
- Slack or open ice....Detached ice that can be worked through. Ice is said to be slackening when it begins to open up so as to be navigable.
- A lead.....A strip of navigable water opening into the pack.
- Hummocky ice.....Rough, uneven or thick ice.
- Slob.....Snow afloat and forming into ice.
- Water sky.....A dark or bluish appearance of the sky indicating open water beyond the ice pack.
- Rafting.....Occurs when two pans meet with force either by the action of winds or currents, the edges are broken off and either rise on top of or pass under the body of the other.
- Growler.....A more or less washed and rounded lump of ice which rolls about in the water; formed from broken-up bergs or detached pieces of heavy old Arctic floe ice.
- Collar ice.....The margin of ice frozen fast to an island or shore, presenting an abrupt wall against which the floating ice rises and falls with the tide.
