Health Infobase

Canadian health data visualizations made easy and accessible

What is Health Infobase?

As part of Canada.ca, the award-winning **Health Infobase** provides Canadian health information on a wide variety of topics including COVID-19, mental health, priority populations, and more.

Easily search, explore, and understand Canadian health information using **interactive and accessible data tools** with simple drop-down menus.

Access easy-to-read **data blogs** for quick facts on diverse health topics.

Health Infobase
Health data in Canada

Data tools, infographics, charts and blogs about health data in Canada.

Featured

Health of People in Canada Dashboard
Interactive snapshot of our population health.

Chronic disease surveillance in Canada
National estimates and trends over time for over 20 chronic diseases and conditions.
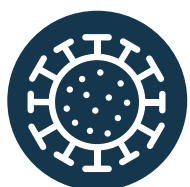

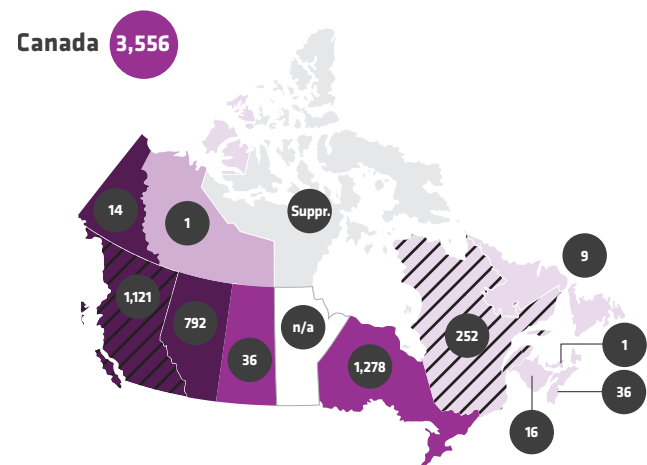

Top categories COVID-19 Opioids Mental health

Samples of Health Infobase Data Products

The Chief Public Health Officer's Health of People in Canada Dashboard provides a snapshot of the health of our population, while showing the wide range of health, socio-economic, and environmental factors that interact, to keep us healthy and well. Learn more about featured topics via **dynamic data stories** ("scrollytelling").

How healthy are people in Canada?
An indicators dashboard

People in Canada generally live long and healthy lives, but not everyone has the same opportunity for good health. This dashboard explores the health of our population using more than 50 interactive indicators.

The Opioid- and Stimulant-related Harms in Canada dashboard is **updated quarterly with the most recent available data** on overdoses and deaths involving opioids and/or stimulants. Dive deeper into the data **via interactive maps and charts**.

COVID-19 data products support the pandemic response through interactive data visualisation tools including maps and dashboards reporting Canada-wide statistics on cases, vaccinations, mental health, wastewater, and more. **Viewed over 17 million times**.

The Health Inequalities Data Tool allows exploration of **interactive data on over 160 health indicators** for the general population and across the life course, regarding characteristics meaningful to health equity. Accompanied by **downloadable companion resources**.

Creating with clients and users in mind

Health Infobase clients are **within the Government of Canada**, who have Canadian health data they wish to develop into data visualizations.

During the data product development process, **we work closely with clients to understand:**

- Who are the users of the data visualization product?
- What will they do with the data?
- How can the product help them get what they need from the data?
- What health story is being told?

The **Health Infobase Design Manual** also guides clients throughout the product development process. Once data visualization products are launched, **we gather user experience information to continuously improve the products**.
