

ESTIMATES OF ECONOMIC ACTIVITY IN REGIONS
OF THE CANADIAN GREAT LAKES BASIN
FOR THE PERIOD 1972 - 2020
- Series A, Volume II -

Prepared for Social Sciences Division
Inland Waters Directorate - Ontario Region
May 1975

By
C. A. Sonnen and P. M. Jacobson

PREFACE

The Estimates of Economic Activities were prepared by Mr. C. Sonnen and Mr. P. Jacobson of INFORMETRICA Limited in Ottawa to provide a solid economic base for the International Joint Commission Reference Studies of Pollution of the Upper Great Lakes and Pollution from Land Use Activities. In particular, the estimates will be used in the Wasteloading Forecasting and Policy Simulation Model for Lakes Superior and Huron and in the Land Use Forecast and Policy Simulation Model for the entire Great Lakes Basin.

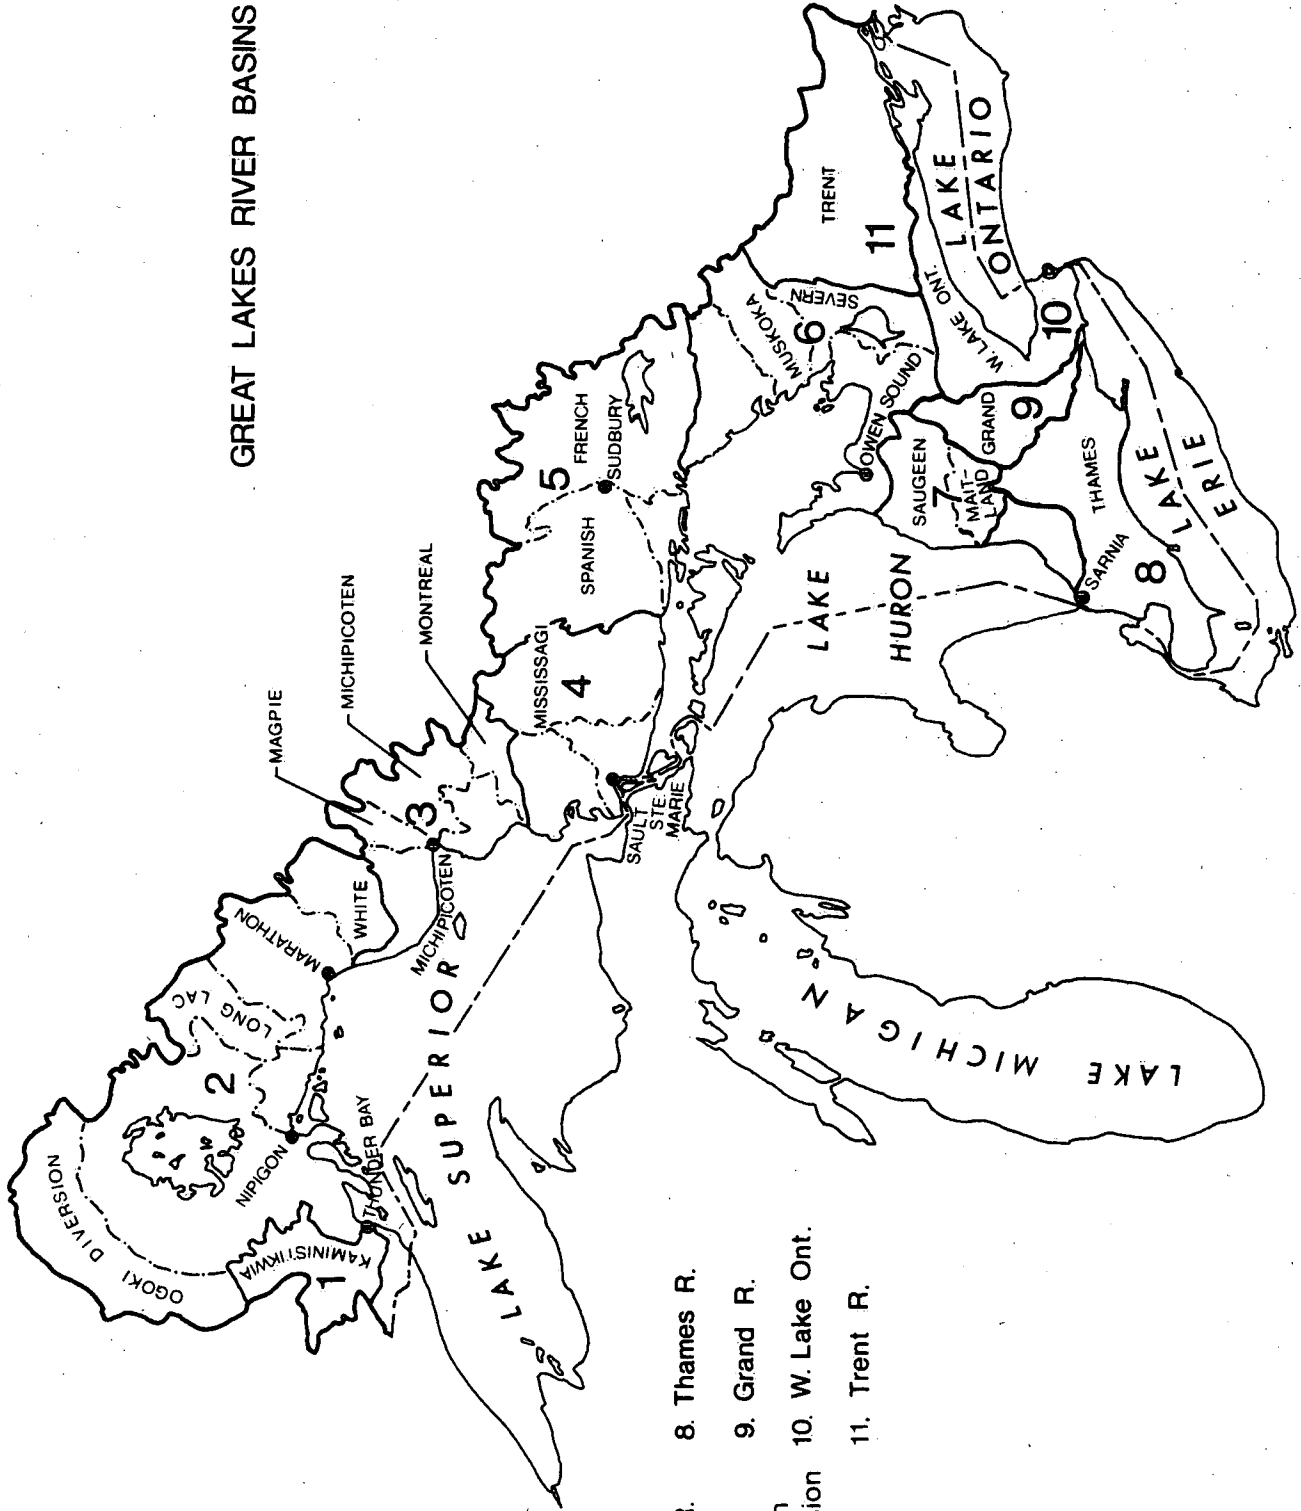

Extensive efforts and costs have gone into the preparation of the CANDIDE "Canadian Disaggregated Interdepartmental Econometric" model which was used for the production of these estimates, but no attempt had been made previously to project so far into the future. Various critical assumptions regarding social and policy parameters had to be made in order to make quantitative detailed estimates possible.

The "Series A" Estimates are based on a set of assumptions compatible with a continued trend in the development of the Service Industry. Volume I, available separately, contains a discussion of the overall forecast methodology, major assumptions, and projected results, as well as the estimates for the Upper Lakes Regions. Volume II, presented here, contains only the estimates for the Lower Lakes Regions. The "Series B" Estimates will be based on an alternative set of assumptions.

It is imperative that any use of the Estimates should be based on a clear understanding of these principal assumptions and the consequences of departing from these assumptions.

With this in mind, the document will provide a highly useful reference and benchmark of economic activity for many planning applications in the Great Lakes Basin.
