ATMOSPHERIC ENVIRONMENT SERVICEGREATEST RAINFALL, SNOWFALL AND
PRECIPITATION ON ANY ONE OBSERVATION
DAY - BRITISH COLUMBIA

by

Frank D. Manning

This report for British Columbia is one of a series of data publications to be prepared listing the greatest rainfall, snowfall and precipitation observed on an "observation day" or "precipitation day" at official stations of the Atmospheric Environment Service. The data which appears in this circular will be of value in assisting hydrologists, engineers, and others, in storm data searches and evaluation of heavy precipitation occurrences.

The "observation day" at principal climatological stations consists of the 24 hours ending at 0600 GMT. At most ordinary climatological stations, the "observation day" ends at the time of the next day's morning observation. This is usually about 8 a.m. local time, but varies from 6 a.m. to 10 a.m. It should be noted that maximum amounts for any consecutive 24 hours may be higher than the amounts listed here which apply to a specific 24 hour period.

The values in this circular were obtained by examining data from all stations with at least 5 years of record and includes data to the end of 1983. In a number of cases the observation site has not been at the same location for the whole period of record, but the data have been considered

ET DE PRÉCIPITATIONS SUR UN JOUR
D'OBSERVATION - COLOMBIE-BRITANNIQUE

par

Frank D. Manning

Le présent rapport fait partie d'une série de publications de données qui fourniront la liste des hauteurs maximales de pluie, de neige et de précipitations enregistrées sur un "jour d'observation" ou un "jour de précipitations", aux stations officielles du Service de l'environnement atmosphérique, dans le cas présent celles de la Colombie-Britannique. Ces données aideront les hydrologistes, les ingénieurs et autres dans leurs recherches de données sur les tempêtes et dans l'évaluation des fortes précipitations.

Aux stations climatologiques principales, le "jour d'observation" dure 24 h et commence à 0600 TMG. A la plupart des simples stations climatologiques, le "jour d'observation" se termine à l'heure de l'observation du matin du jour suivant, soit en général vers 8 h, heure locale, mais cela peut varier entre 6 et 10 h. On doit noter que les maximums enregistrés sur toute période de 24 h consécutives risquent d'être plus élevés que les valeurs qui figurent ici, enregistrées sur une période de 24 h bien déterminée.

On a obtenu les présentes valeurs en examinant les données de toutes les stations comptant au moins 5 ans de relevés et ce, jusqu'à la fin de 1983. Dans certains cas, la station a changé d'emplacement au cours de la période de relevés, mais l'on considère que les données sont homogènes si la station

homogeneous if the same station name has been used throughout the period. No attempt has been made to show months or years with missing data as only the dates of beginning and ending are shown in the column headed "years of record". The precise periods of record may be found by consulting the appropriate Station Data Catalogue.

The units used, expressed to the tenth part, are millimetres for rainfall, centimetres for snowfall and millimetres for total precipitation. No attempt was made to indicate total precipitation amounts where there was a combination of rainfall and snowfall on that day.

The ten largest amounts of rainfall, snowfall and precipitation have been listed in a short table found on page 22.

January/1985

n'a pas changé de nom. On n'a pas essayé d'indiquer les mois ni les années de données manquantes et seules les dates du début et de la fin figurent dans la colonne "années d'observations". On peut se renseigner sur les périodes précises de relevés en consultant le Catalogue de données des stations climatologiques.

Les valeurs sont exprimées au dixième près, en millimètres pour la pluie, en centimètres pour la neige et en millimètres pour les précipitations totales. On n'a pas cherché à indiquer les totaux de précipitations des jours où il a à la fois plu et neigé.

On trouve à la page 22 un petit tableau des dix hauteurs de pluie, de neige et de précipitations les plus importantes.
