ADDENDUM

- 1) Canadian Climate Normals 1951-1980
Vol. 3 Precipitation Table 2
- 2) Canadian Climate Normals 1951-1980
Temperature and Precipitation
(6 volumes)

The data contained in this summary are corrections to the monthly and annual means of snowfall for selected stations as published in the above-noted volumes. It has been found that the data adjustment routines, produced exaggerated snowfall values for some Spring and Fall months at certain stations, when the adjusting station selected, happened to be one in which most Spring and Fall months had very little snowfall throughout the entire period of record.

For those months found to be in error, the arithmetic averages of all available data during the 1951-80 period have been substituted. These numbers, which provide reasonable estimates for the problem months, appear in the tables below in bold type. The remaining monthly values for a given station are simply the 1951-80 adjusted values as previously published. The annual averages for the stations listed were re-calculated by summing the twelve monthly values and these also are shown in bold type to indicate that they too have been amended.

Any questions or problems relating to these data may be directed to the Climatological Services Division at the address given below.

- 1) Normales climatiques au Canada - 1951 à 1980, volume 3 Précipitations Tableau 2
- 2) Normales climatiques au Canada - 1951 à 1980, Températures et précipitations
(6 volumes)

Les données figurant au présent résumé constituent des corrections apportées aux moyennes mensuelles et annuelles des précipitations nivales pour des stations choisies, parues dans les ouvrages susmentionnés. On a constaté que si, par hasard, la station servant à faire les corrections recevait très peu de neige pendant la plupart des mois de l'automne et du printemps tout au long de la période des relevés, les sous-programmes de correction des données donnaient des hauteurs de neige exagérées pour certains mois du printemps et de l'automne à certaines stations.

Dans le cas des mois où l'on a relevé des erreurs, on a substitué la moyenne arithmétique de toutes les données dont on dispose pour la période de 1951 à 1980. Ces valeurs, qui constituent des estimations vraisemblables pour les mois en question, figurent en caractères gras aux tableaux ci-dessous. Pour une station donnée, les autres valeurs mensuelles ne sont que les valeurs corrigées pour 1951 à 1980, déjà publiées. On a recalculé les moyennes annuelles des stations énumérées en additionnant les douze valeurs mensuelles, et elles figurent aussi en caractères gras pour indiquer qu'elles ont été modifiées.

Pour toute question ou difficulté concernant ces données, s'adresser à la Division des services climatologiques.
