FOR EXPORT

CANADIAN CHEMICALS *for export*

This publication has been prepared by the Chemicals Division of the Department of Trade and Commerce and additional copies are available from the Department in Ottawa or the nearest Canadian Trade Commissioner's office.

NOTE: *Only those chemical products are included where suppliers have indicated they are available for export to at least some parts of the World. There are many chemicals produced in Canada that are not available for export to every country because of international corporate policy, geographical considerations or insufficient capacity to handle new orders.*

INTRODUCTION

Buyers of chemicals and chemical products around the world look to Canada as a source of a wide range of quality chemicals, at competitive prices with dependability of supply and delivery.

The growth of the chemical industry in Canada in the 1960's has been particularly strong. This edition has been expanded from previous editions, which listed only chemical raw materials and intermediates, to include many end-use products — paints, pharmaceutical preparations, adhesives, soaps, insecticides, and other chemical specialities.

This publication is divided into four sections:

1. A general outline giving statistics of the industry.
2. A listing of industrial chemicals and trade names as well as chemical products available for export and the manufacturers' names.
3. A summary of some important chemical consuming industries and the individual chemicals available for them from Canada.
4. An alphabetical list of the companies referred to in this directory along with the products they have available for export.

This comprehensive booklet is designed to assist Canadian Trade Commissioners and industrial representatives abroad to determine the potential demand for Canadian chemicals by the industries located in their respective territories.

Bulk sulphur about to be loaded aboard ship from a rail car at Vancouver for export.

CANADA'S CHEMICAL INDUSTRY

While Canada's chemical industry boasts more than half a century of growth, most of its spectacular expansion has taken place since the end of World War II. During the 1950's capital investment in new plants and equipment reached close to \$1 billion and in the first half of this decade, investments have already equalled the total of those made in the 1950's.

This substantial investment and the research, manufacturing, testing, process and quality control methods have made Canada the world's seventh largest chemical producer with a 1964 output of approximately \$1³/₄ billion.

Research plays an important part in helping Canada to maintain its position as the world's seventh largest chemical producer.

This dazzling night scene is part of Maitland, Ontario plant of Du Pont of Canada Ltd. which produces nylon flake for export.

The following table summarizes production, exports and imports, apparent consumption and percentage of Gross National Product pertaining to the Canadian chemical industry since World War II.

TABLE I
CANADIAN CHEMICAL PRODUCTION AND TRADE
(MILLIONS OF DOLLARS)

	1950	1955	1960	1961	1962	1963 (preliminary)
Value of Canadian production	647	1,044	1,365	1,434	1,544	1,638
Value of exports from Canada	101	184	238	248	248	273
Value of imports to Canada	158	260	339	370	395	410
Value of apparent consumption	704	1,120	1,466	1,540	1,677	1,779
Chemical production as percentage of gross national product	3.59	3.85	3.76	3.84	3.79	3.80

The birth of the Canadian chemical industry occurred with the early development of Canada when there was a constant demand for explosives to clear the land and fertilizers to enrich it. Then followed the development of inorganic chemicals and later organic chemicals with the outbreak of World War II. In the post-war period organic chemical production has risen sharply, particularly in the petrochemical field. As indicated by the variety of chemicals listed in the accompanying directory, Canada now has a widely diversified chemical industry serving every facet of business, industry and the home.

DOMESTIC PRODUCTION

The chemical and chemical products industries comprise the following areas: explosives and ammunition, mixed fertilizers, plastics and synthetic resins, pharmaceuticals and medicines, paint and varnish, soap and cleaning compounds, toilet preparations, industrial chemicals (acids, alkalies, salts, basic fertilizer materials, compressed gases, industrial organic compounds and synthetic rubber), printing inks and "other chemicals" including adhesives, polishes, dressings and insecticides. To define the industry another way, the chemicals group includes products manufactured by controlled processes involving molecular change while the chemical products group includes goods that have been mainly processed — that is, compounded, mixed and repackaged. Materials from the basic chemical industry are sold mainly to other manufacturing firms whereas goods of the chemical products group are sold mainly for direct consumption.

The growth in production value for these various groups is shown in Table II.

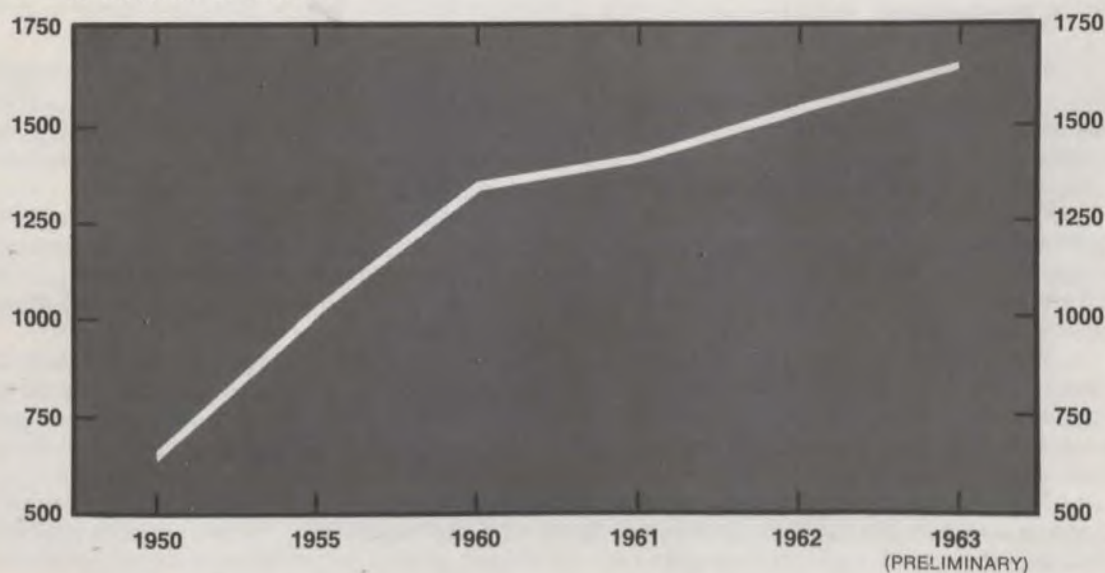

TABLE II
PRODUCTION BY COMMODITY GROUPS
(THOUSANDS OF DOLLARS)

	1950*	1955*	1960	1961	1962	1963 (preliminary)

Other chemical industries N.E.S.			143,396	150,719	167,498	173,990
TOTAL	<u>646,871</u>	<u>1,044,079</u>	<u>1,364,654</u>	<u>1,433,877</u>	<u>1,543,884</u>	<u>1,638,338</u>

*A breakdown of production by commodity group is not given for 1950 or 1955 as the method of assembling and reporting these statistics by the Dominion Bureau of Statistics has changed and therefore the figures are not comparable.

The industrial chemicals group is the largest in terms of production value with pharmaceuticals and medicines, soaps and cleaning compounds, paint and varnish, and plastics and synthetic resins following in that order.

CANADIAN PRODUCTION OF CHEMICALS AND ALLIED PRODUCTS
in millions of dollars

A GROWING INDUSTRY

In Canada's production statistics, manufacturers of industrial chemicals comprise the largest single group. Included are the bulk of the inorganic chemical producers, including those making basic fertilizer materials as well as manufacturers of most organic chemical products. This segment of the industry is the fastest growing, as demand increases for fertilizer materials for both domestic and export markets.

The map and Table III illustrates distribution of chemical production by geographical area and shows the industry is concentrated in Ontario and Quebec. The principal chemical producing areas in Canada are at Shawinigan Falls and Montreal in Quebec, at Sarnia and elsewhere in southern Ontario, and in Western Canada at Edmonton, Alberta, and Trail, British Columbia.

The producers of organic chemicals have experienced rapid growth as the use of these products in plastics, surface coatings, and detergents have expanded due to technological advances and the high level of business activity in Canada. Investments in this area are rising as new plants are built and others expanded to keep pace with the growing domestic and export demands.

The primary plastics group showed the largest percentage increase during the past decade and it is expected to continue to grow at a rapid rate, in common with the plastics industry the world over. The largest volume plastic produced in Canada is polyethylene,

with production capacity exceeding 200,000,000 pounds per year at the end of 1964. Rapid expansions are also taking place in polyvinyl chloride capacity and domestic and export sales of polystyrene continue to grow.

TABLE III
PRODUCTION BY AREA
(THOUSANDS OF DOLLARS)

Year	Atlantic Provinces	Quebec	Ontario	Prairies	British Columbia	Total
1955	12,649	334,498	578,134	52,160	66,638	1,044,079
1960	13,636	390,572	816,812	75,770	67,864	1,364,654
1961	15,155	406,438	861,064	79,360	71,860	1,433,877
1962	15,259	416,312	936,842	93,826	81,645	1,543,884
1963	15,571	454,717	982,515	102,345	83,190	1,638,338

Capacity for the production of many types of fertilizer materials in Canada continues to widen. In particular, developments in the potash industry in Saskatchewan, including the world's first solution mining of potash, have made Canada a leading world producer with a capacity of nearly 3 million tons reached by early 1965. Large increases in ammonia capacity are underway and a number of plants for ammonium phosphates, ammonium nitrate, urea and other ammonia based products are in various stages of completion. These new plants, as well as the expansions underway in existing ones, will add hundreds of thousands of tons each year to fertilizer production in Canada.

Production of elemental sulphur has increased in the past decade from negligible quantities to approximately 1½ million long tons in 1964, making Canada one of the world's principal sources of sulphur. Most of this production is being exported and although the United States is the largest single market, bright elemental sulphur is available for export to virtually every corner of the earth.

The chemical products sector of the industry has continued to grow and diversify to meet the demands of the Canadian consumers and the production value of this sector amounts to nearly one half the total chemical industry. Products incorporating the latest technological developments are available from all sectors and an increasing number of firms in the chemical specialty field are displaying a growing interest in developing exports.

EXPORTS ALWAYS VITAL

Exports have always played a vital role for many of Canada's chemical producers as shown in Tables IV and V, which outline the pattern of our chemical export trade by commodity groupings and areas of destination. Most of Canada's chemical export trade has traditionally been with the United States and in 1963 that country received 47 per cent of our total shipments abroad. Britain has remained our second largest customer, accounting for 13 per cent in 1963, while the rest of Europe accounted for 16 per cent. Japan and Australia are Canada's most important customers in the Pacific area.

Production and exports of fertilizer materials have been growing rapidly in recent years and now represent the largest single export group in the chemical industry. Continued growth is assured as heavy investments are being made to increase the productive capacity of potash fertilizers as well as nitrogenous and phosphate types.

The bulk of Canada's fertilizer materials are produced in Western Canada and markets for these products are concentrated in the western areas of the United States. With the advent of potash production however, increasingly large shipments have been going to Pacific markets, especially in Asia. Production of fertilizer materials is undergoing substantial expansion in Eastern Canada and the long range prospects for exports are im-

proving from this part of the country. The large volume of mixed fertilizers produced in Eastern Canada is not yet reaching export markets on a regular basis.

Over 50 countries look to Canada as a source of synthetic rubber because Canada has established a reputation for high quality and service. These exports are expected to continue at a high level despite the increase in capacity in other parts of the world. Synthetic rubber exports represent a significant part of the synthetic resin and synthetic rubber category in Table IV.

Synthetic resins are exported to every continent, with polyethylene being the largest volume item. Other resins and compounds entering export markets include polystyrene, cellulose derivatives, polyvinyl chloride, nylon, phenol formaldehyde, alkyds and polyesters, and although domestic production has become established in many countries the increasing world demand continues to provide a market for Canadian producers.

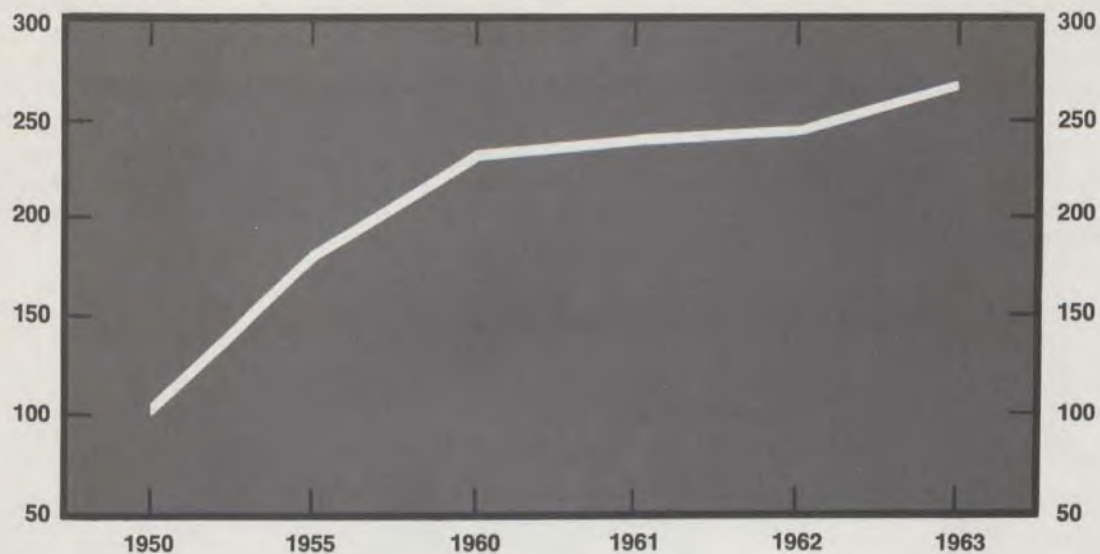

TABLE IV
EXPORTS BY COMMODITY GROUPS
(THOUSANDS OF DOLLARS)

Classification	1961	1962	1963

CANADIAN EXPORTS OF CHEMICALS AND ALLIED PRODUCTS in millions of dollars

The foregoing tables and comments give a brief outline of the extent of Canada's chemical production and exports, and the accompanying directory illustrates the great variety of chemicals offered for export. As Canada grows, the problem of its small domestic market will gradually resolve itself and the long-term trend is certainly towards greater volume and variety.

Synthetic rubber emerges in crumb form in a water slurry on its way to the driers and packaging area at the Sarnia, Ontario plant of Polymer Corporation.

A BRIGHT FUTURE

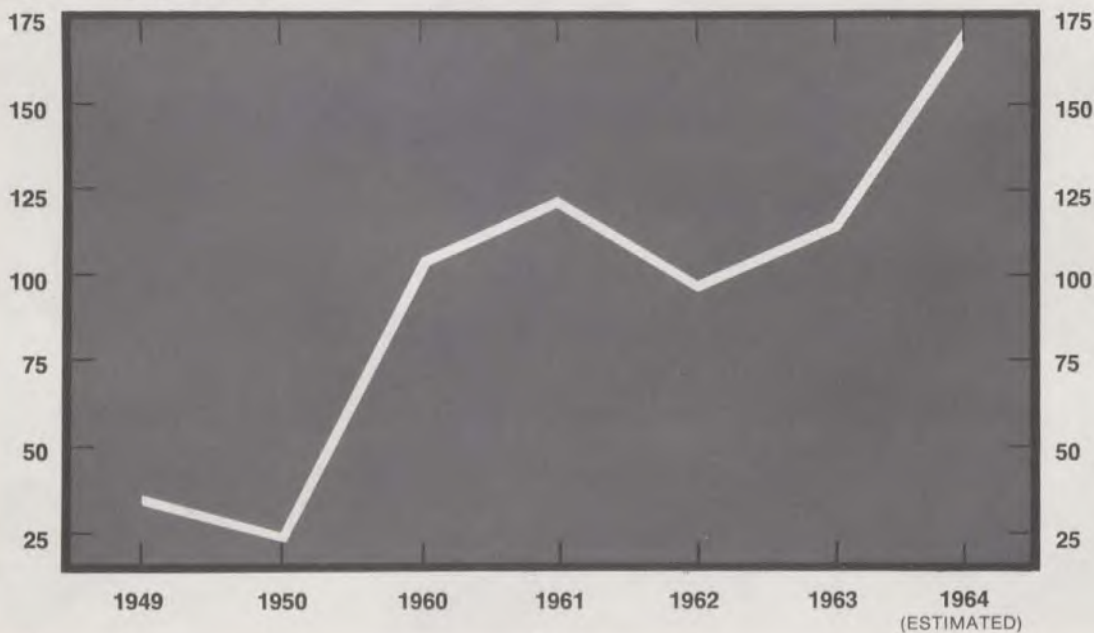

One of the major problems facing Canadian chemical producers is the relatively small size of the domestic market, resulting often in only minimum economic plants being built making it difficult to compete with countries that can support larger plants. Despite this handicap, our producers are able to take advantage of certain favorable factors, such as low-cost power in some areas and low-cost indigenous raw materials in others, which enable them to compete successfully the world over.

Lately, expansion of chemical capacity as reflected in Table VI (New Plant Investment) has grown at a rate which promises to maintain the overall growth pattern. Preliminary figures for 1964 indicate an investment of approximately \$174,000,000, an increase of nearly 50% over 1963.

TABLE VI
NEW PLANT INVESTMENT
(MILLIONS OF DOLLARS)

Year	Construction	Machinery and Equipment	Total

Over 20 important petrochemicals and cellulose acetate are produced at the Edmonton, Alberta plant of Canadian Chemical Company, division of Chemcell (1963) Ltd.

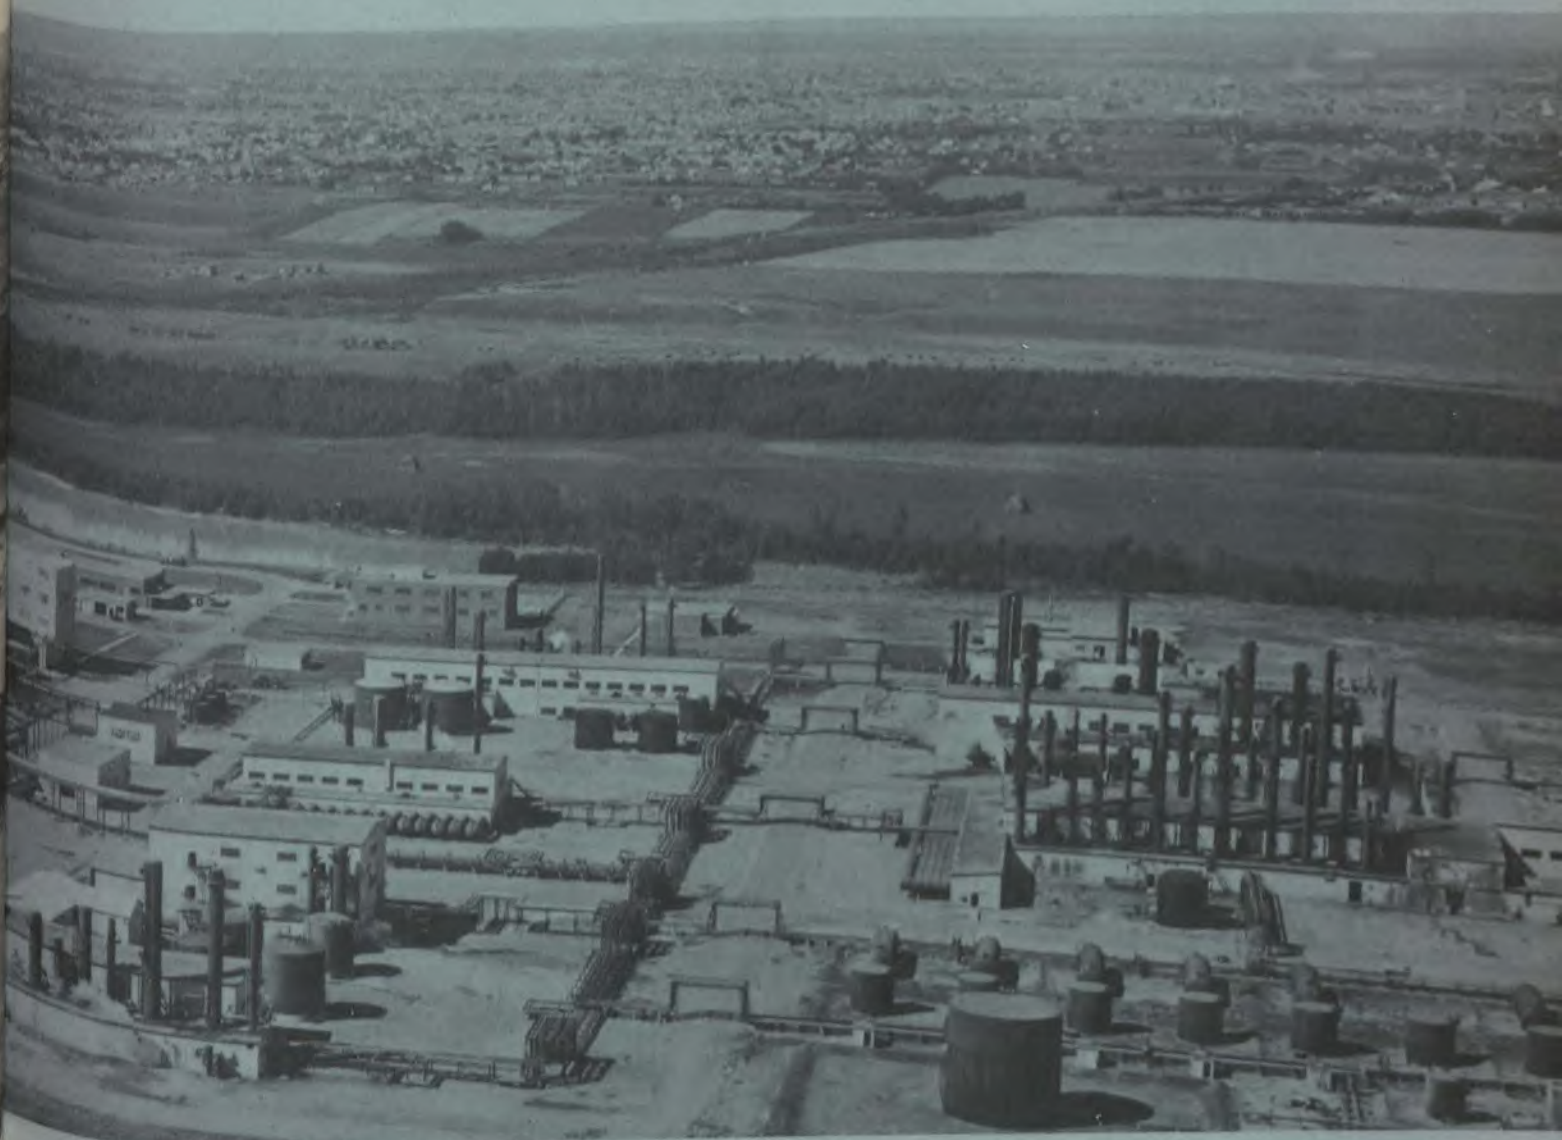

Chemical Products

Various sections of the chemical products industry have the following products available for export. In most cases these products are grouped under general headings and details on availability of particular types of products may be obtained through the Canadian Government Trade Commissioner.

ADHESIVES

In addition to the traditional animal, fish, starch, dextrine and rosin glues a large number of Canadian adhesives are now based on synthetic resins including thermoplastics such as vinyls, cellulose, acrylics and polyamides; thermosetting adhesives like epoxies, phenolics, alkyds, polyurethanes, silicones and ureas; and rubber (latex, neoprene, polysulfide, SBR, butyl, etc.).

Canadian adhesives, sealants and contact cements enjoy widespread use in the packaging, labelling, paper and paper converting, plywood, furniture, construction, electronics, automotive, leather, rubber and textile industries. Hot melts, pressure sensitives and sealing lacquers are manufactured as well as emulsions, gums, liquids, pastes, powders and water and solvent based types. The nature of the surfaces to be bonded is a very important factor in determining the type of adhesive to use and formulations are available for bonding metal, plastic film, paper, wood, composition board, stone, tile, leather, fabric, rubber, glass, ceramics and plastic and combinations of these materials.

At the consumer level a wide variety of adhesives are manufactured for attaching, patching, sealing and repairing household goods such as china, jewellery, wall tiles, glassware, toys, furniture, metalware, kitchen utensils, luggage, clothing, and rubber, paper and plastic items. These are available in handy retail packages and ideal for the "do-it-yourselfer".

BUILDING AND CONSTRUCTION SPECIALTIES

Chemical specialties are playing an increasingly important role in the building and construction industries. Hardeners, curing and air entraining agents and special anti-freezes are being used to aid the setting of concrete and cement. Oleoresinous, epoxy, polysulfide, butyl rubber and oil based compounds are finding widespread use as caulks and sealants for bathtubs, tiles, doors, windows, copings, pavements, boats, pipe joints, reservoirs and numerous other construction and expansion joints. Patching materials for filling cracks and building up worn areas are available for concrete, wood, masonry, plaster, metal and asphalt surfaces.

Bonding agents, trowelled-on flooring materials, tar pitch, masonry preservatives and a host of paints, industrial coatings and miscellaneous materials round out this field.

CLEANING COMPOUNDS

A wide choice of soaps and detergents are available from Canada including hand, toilet, castile, textile, medicinal, pumice, laundry, paste, scouring, leather, germicidal, dish-washing, animal and soft varieties.

Nearly all manufacturing and service industries require specialty cleaners and some of the major users are the pulp and paper, textile, printing, railroad, aviation, shipping, automotive, machinery, electroplating, enamelling, food and bottling industries. A few of the specialty cleaners employed are metal degreasers and conditioners, descalers, wax and paint strippers, decarbonizing agents, rust and slime removers, boiler, bilge and aircraft cleaners, scouring and wire cleaning preparations.

Institutional cleaning compounds find widespread use in cleaning and maintaining offices, restaurants, theatres, hotels, stores, schools, hospitals and public buildings. Firms

manufacturing compounds for commercial cleaning usually compliment the cleansers with a range of disinfectants, deodorants, waxes, polishes and floor finishes.

For the home, cleaning products such as laundry bleach, kettle and iron descalers, metal cleaners, drain aids and bathroom cleansers are available as well as specialty cleaners for frypans, porcelain, carpets, upholstery, windows and glass, dishes, walls, tiles, floors and other requirements.

SURFACE COATINGS

The Canadian paint industry manufactures a wide variety of specialized industrial coatings and exterior and interior household paints which are available for export. Clear and pigmented coatings for concrete, wood, plastic, metal, cement, glass, paper, canvas and a variety of other surfaces are produced and these consist of a number of chemical types including alkyds, acrylics, latex, oil based, vinyls, cellulose, urethanes, epoxies, silicones, water based, polyesters and phenolics. The industry is capable of providing first quality finishes to meet almost all requirements and it is hoped that the following end use classification will enable potential customers to select appropriate Canadian suppliers.

WAXES AND POLISHES

A variety of waxes and polishes are manufactured in Canada for use in the home, commercial buildings and industry. Many are composed of natural wax and polymeric synthetic resin blends but several waxless non-skid varieties are being formulated. Paste, liquid (solvent and water based) and emulsion types are available in consumer, aerosol and bulk packs for a wide range of surfaces: wood, glass, leather, silver, brass, copper, plastic, painted and resilient flooring materials.

CUSTOM AEROSOL PACKAGING

Several Canadian firms are engaged in aerosol packaging of chemical specialties. These companies export their own formulations under their own labels or, alternatively, package the products using the foreign customers' brand names. A wide variety of household and consumer aerosol products are available including insecticides, air fresheners, deicers, window cleaners, paints, adhesives, artificial snow, polishes, waterproofers, paint removers, lubricants, oven cleaners, penetrating oils, starches, rust preventatives, insect repellants, fire lighters, pharmaceuticals, drugs, food products and cosmetics.

WATER TREATMENT COMPOUNDS

A variety of boiler water and cooling water conditioners are manufactured in Canada, including scale and corrosion inhibitors, algaecides, coagulants, water softeners and others.

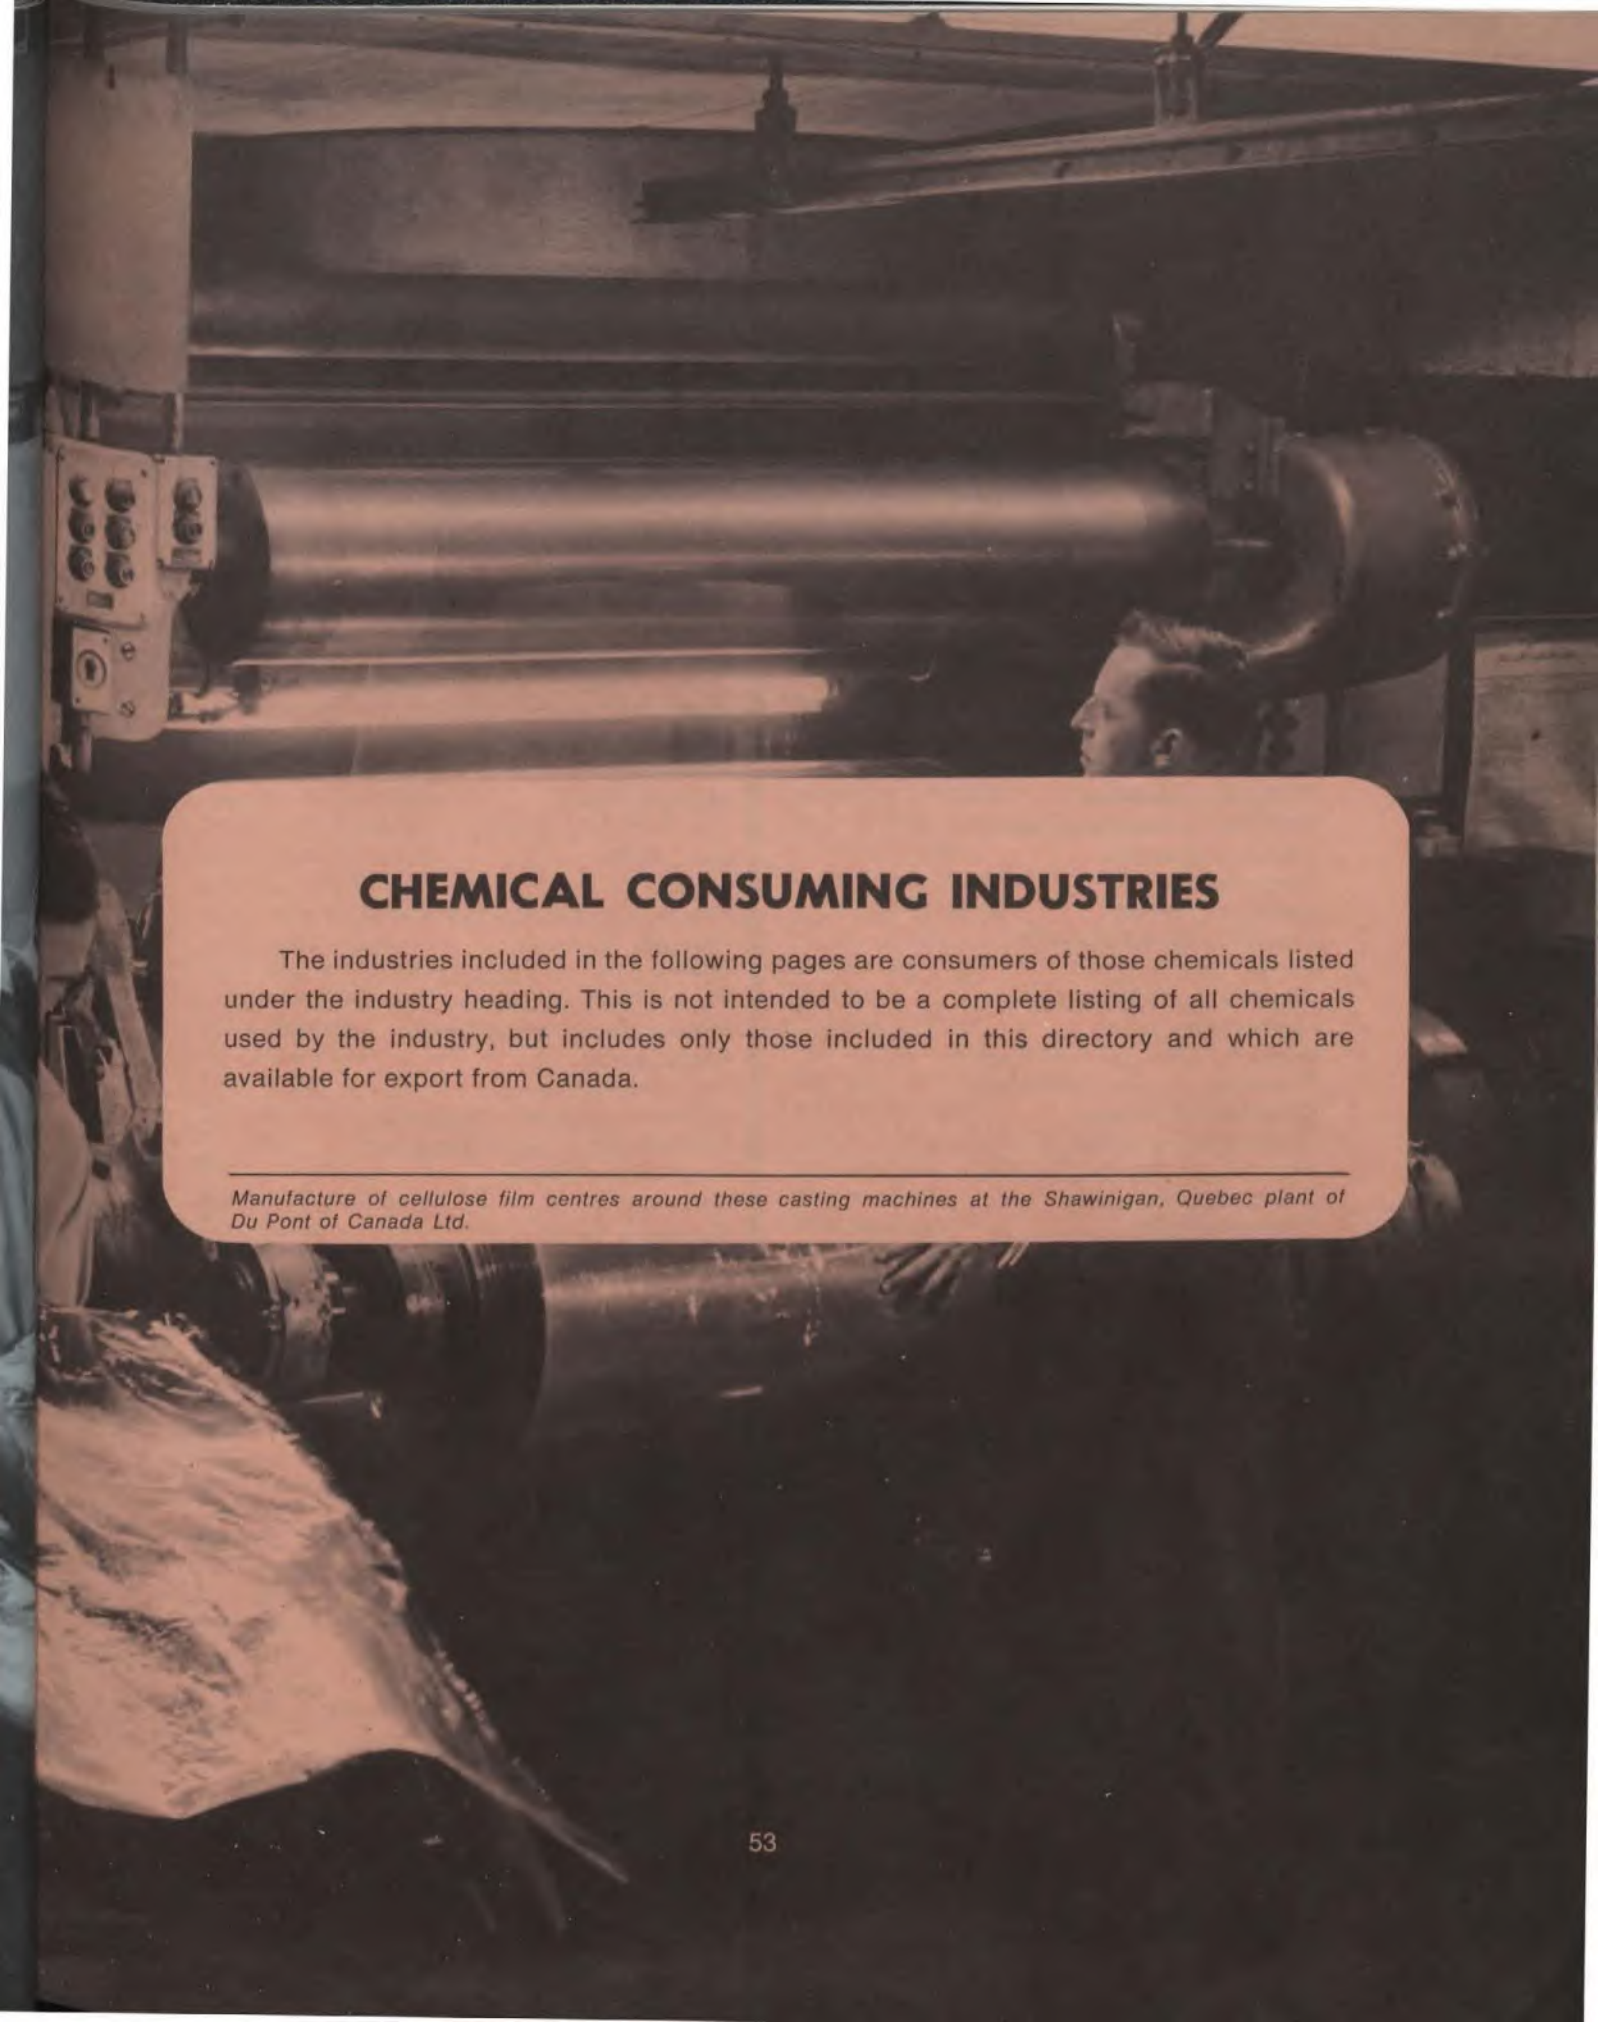

Many of these compounds can be tailor-made to solve specific water treatment problems and detailed technical data and application instructions are available to ensure proper usage.

CHEMICAL CONSUMING INDUSTRIES

The industries included in the following pages are consumers of those chemicals listed under the industry heading. This is not intended to be a complete listing of all chemicals used by the industry, but includes only those included in this directory and which are available for export from Canada.

Manufacture of cellulose film centres around these casting machines at the Shawinigan, Quebec plant of Du Pont of Canada Ltd.

Pincher Creek, Alberta sulphur extraction plant of British-American Oil Co. Ltd.

DIRECTORY OF MANUFACTURERS

The following directory of manufacturers includes the names, addresses and products of those firms who have indicated they have chemicals available for export. In many cases the list does not represent the complete product line of the firm, and all Canadian producers of chemicals are not listed. For firms manufacturing the following chemical products, further detail is available by referring to the appropriate section:

Adhesives

Automotive Chemicals

Building & Construction Specialties

Cleaning Compounds

Inks

Pesticides

Pharmaceuticals

Plastic Film & Sheet

Surface Coatings

Waxes and Polishes

A powerful continuous mining machine backs off for a new bite of potash ore in the mine of International Minerals & Chemical Corporation (Canada) Ltd. at Esterhazy, Saskatchewan.

One of the two control rooms at the nylon intermediates plant of Du Pont of Canada Ltd. at Maitland, Ontario. Since 1953, several expansions have enabled it to keep up with the growing demand.
