MANUFACTURING

TRADE AND MEASURES

1981-1987

The Manufacturing Trade and Measures tables presented here are based on the Commodity Trade by Industrial Sector, Historical Summary, 1983-1987, issued by the Department of Industry, Science and Technology earlier this year. In both sets of tables, Canada's external merchandise trade is allocated to the most nearly appropriate industry groups according to the 1980 Standard Industry Classification. For the Trade and Measures, the sectoral trade statistics are matched as closely as possible with manufacturing shipments (as a proxy for total production) on an SIC basis to facilitate the calculation of a set of ratios and other measures of the Canadian market (including apparent consumption).

For completeness, some SIC series have been included in the tables presented here where there are apparent differences in the allocation and/or valuation of goods between the sectoral trade data and the value of domestic shipments based on the Census of Manufacturers. In these cases, the total exports in some years are greater than the value of shipments reported. This discrepancy is indicative of the potential imprecision in using data developed from two different sources to calculate the Trade and Measures Tables. The five SICs where this occurs are footnoted in the tables and users are cautioned in the interpretation of the measures for these sectors, which incorporate both trade and shipment data. Users should note that ratios that are found to be either negative or 1000 per cent or more are set to zero in the tables.

In the following table of contents, the 1980 SIC series for which the necessary data was obtained to calculate the trade and measures are listed in ascending order according to: Division (E for manufacturing), Major Group (two-digit), SIC (three- or four-digit). Users should note that, because of missing series, values at a three- or four-digit SIC level are not necessarily added to the next SIC level and/or major group value.

Following the table of contents (page 6) there is a brief description of the data sources used for the trade and measures calculations and a glossary describing the measures presented.

NOTE:

1. All values for trade, shipments and related measures are in millions of current dollars.
2. Trade data -- exports, imports, trade balances and trade turnovers -- are on a customs value basis, Trade of Canada, allocated to industrial sectors according to the 1980 Standard Industrial Classification.
3. Figures on values of shipments 1981-1985 are obtained from Statistics Canada's Census of Manufacturers. For 1986 and 1987, the value of shipments is based on estimates obtained from Statistics Canada's Inventories, Shipments and Orders Survey.
4. Glossary:

EX	- Domestic Exports
IM-REX	- Adjusted Imports (Total Imports - Re-exports)
TB	- Trade Balance (Exports - Imports)
TT	- Trade Turnover (Exports + Imports)
SH	- Shipments
CM	- Canadian Market (Shipments + Imports - Exports)
TD	- Total Demand (Shipments + Imports or Canadian Market + Exports)
TB/TT	- Normalized Trade Balance (Exports - Imports/Exports + Imports)
TT/TD	- Trade Turnover/Total Demand
EX/TD	- Export Ratio (Exports/Total Demand)
IM/TD	- Import Ratio (Imports/Total Demand)
SH/CM	- Shipments/Canadian Market (indicates surplus if over 100, deficit or import gap if under 100)
EX/SH	- Export Orientation (Exports/Shipments)
IM/CM	- Import Penetration (Imports/Canadian Market)
AVGE	- Average values for 1981-1987
