gionale

The information in this publication was assembled by the Office of Industrial and Regional Benefits. The Office was created in 1981 to identify the opportunities promised by major project developments in Canada and to help translate these opportunities into economic benefits for Canadians in all parts of the country. Through consultations with major project sponsors, the Office ensures that competitive Canadian suppliers of goods and services have full and fair access to major project opportunities. It also promotes the development of Canadian suppliers, where economically warranted, to meet project demand. Another of the Office's functions is to encourage the exchange of information between project sponsors and Canadian companies so that project sponsors will be better aware of Canadian suppliers and Canadian suppliers better informed of project opportunities.

INTRODUCTION

This publication, an update of our first inventory published in October, 1981, attempts to present a complete picture of existing and potential major project activity in Canada during the next decade. It has been produced primarily for the benefit of Canadian suppliers to major projects, but should prove helpful also to project sponsors and potential investors, to all governments in Canada and to economic analysts and others concerned with projecting future levels of economic activity across the country.

The inventory provides rudimentary, but necessary, information for Canadian firms seeking to take advantage of major project opportunities. It lists projects with a minimum investment value of \$100 million that, according to public reports, are under way or could start in Canada before 1993. Commercial building projects are excluded.

The central listing describes each project, indicates its status and assigns it a degree of probability. Projects are listed under one of seven industry groupings and are also arranged according to size of investment and geographical location. As an additional aid to potential Canadian suppliers, available information on requirements for materials, equipment and services is provided. In general, nearly-completed projects whose supply requirements have all been met are not listed. As a pointer to possible additional activity in the future, there is a short, separate listing of projects from the 1981 inventory that have been deferred or suspended indefinitely. An explanation of the format and the terms used in the central listing may be found on the next page. At the back of the inventory is an address list of all sponsor companies, with a contact name for each project. This is intended to encourage would-be Canadian suppliers to make their own direct approaches to sponsors.

The inventory has been compiled from a variety of sources but most of the material was generously contributed by the project sponsors. Every effort has been made to present current information but, due to changing economic conditions and the inevitable time lag between receipt and publication of data, some details may already be out of date. Further verification with the sponsor companies is therefore recommended before using the information as the basis of any business decision. It should also be remembered that listing of a particular project in this inventory is no guarantee of the project's eventual start or completion.

÷

If we have failed to identify any eligible major projects in our listing, we will be happy to include them in future issues. New information and queries concerning the content of this publication should be directed to:

> Office of Industrial and Regional Benefits (BIRB) Department of Industry, Trade and Commerce and Regional Economic Expansion 235 Queen Street Ottawa, Ontario KIA OH5 Phone: (613) 593-5295

TO OBTAIN COPIES OF THE INVENTORY SEE INSIDE BACK COVER

Investment Values

As far as possible, are quoted in constant 1982 dollars excluding Allowance for Cost of Funds Used During Construction.

Project Numbers

All projects have been assigned new numbers. Project numbers used in the 1981 inventory are indicated in brackets under the new numbers. (N) indicates project was not listed in the 1981 inventory.

Industry, Investment Categories

Each project is listed under one of seven industry groupings. Each industry grouping is subdivided into projects of \$500 million or more and those between \$100 million and \$500 million in investment value. For easy identification, the industry and investment value categories are indicated at the top of each page.

Geographical Locations

Within each of the two categories above, projects are also grouped by geographical, including offshore, locations (starting with the Territories, then working east from B.C.) and within this grouping by investment value (highest value first). Double lines denote the end of one geographical location and the beginning of another. Inter-regional projects (involving more than one province or Territory) are also enclosed within double lines. In the case of some inter-regional projects, a primary province has been selected and underlined in the "Location" column.

MEPC

Denotes Management, Engineering, Procurement, Construction and refers to project engineering, design or management firms engaged for a project.

Committed Project

90% to 100% probable

- is under construction or is about to be started, or
- has received all necessary approvals from appropriate government regulatory agencies to allow it to proceed, or
- has been given approval by the company's Board to be started.

Planned Project

60% to 90% probable

- has received company approval "in principle", is currently being studied to confirm economic, marketing and technical viability, and is expected to become "committed" within the next few years, or
- is expected to become "committed" within the next few years based on secured markets, contracts, letters of intent, and/or established economic viability.

Possible Project

30% to 60% probable

- has been identified as a potentially attractive business opportunity and is the subject of preliminary technological, economic and market viability studies.

NEWFOUNDLAND	6	\$ 12,160	1	\$ 450	3	\$ 9,550	2	\$ 2,160
INTER-REGIONAL	16	\$ 52,944	8_	\$ 22,051		\$ 12,840	_5	\$ 18,053
TOTALS	222	\$202,747	105	\$ 77,531	50	\$ 48,095	67	\$ 77,121

* Inclusion of competing project proposals has increased overall total of projects by two and of investment value by about \$2 billion.

N.B. Project expenditures are not all incurred in the region of the project but are distributed throughout Canada and among some foreign sources. If clear, the primary location of inter-regional projects (those involving more than one province or Territory) has been underlined in the inventory. The bulk of the investment in these projects will be centred in British Columbia, Alberta and the Territories.
