CANADIAN AUTO PARTS

CANADA

at the SAE

AUTOMOTIVE ENGINEERING EXHIBITION AND CONGRESS

Stand 1100, Cobo Hall, Detroit, Michigan
January 9 to January 13, 1967

Canada Dept

Published by authority of the Hon. Robert H. Winters, Minister of Trade and Commerce, Ottawa, Canada

It is my pleasant duty to welcome you to the Canadian Exhibit at the SAE Automotive Engineering Exhibition and Congress at Cobo Hall in Detroit, January 9 to 13, 1967. Representatives from Canadian firms and the Department of Trade and Commerce will be in attendance to answer inquiries.

This booklet depicts the steady growth of the Canadian automotive parts manufacturing industry and outlines the automotive products and raw materials available from Canadian sources.

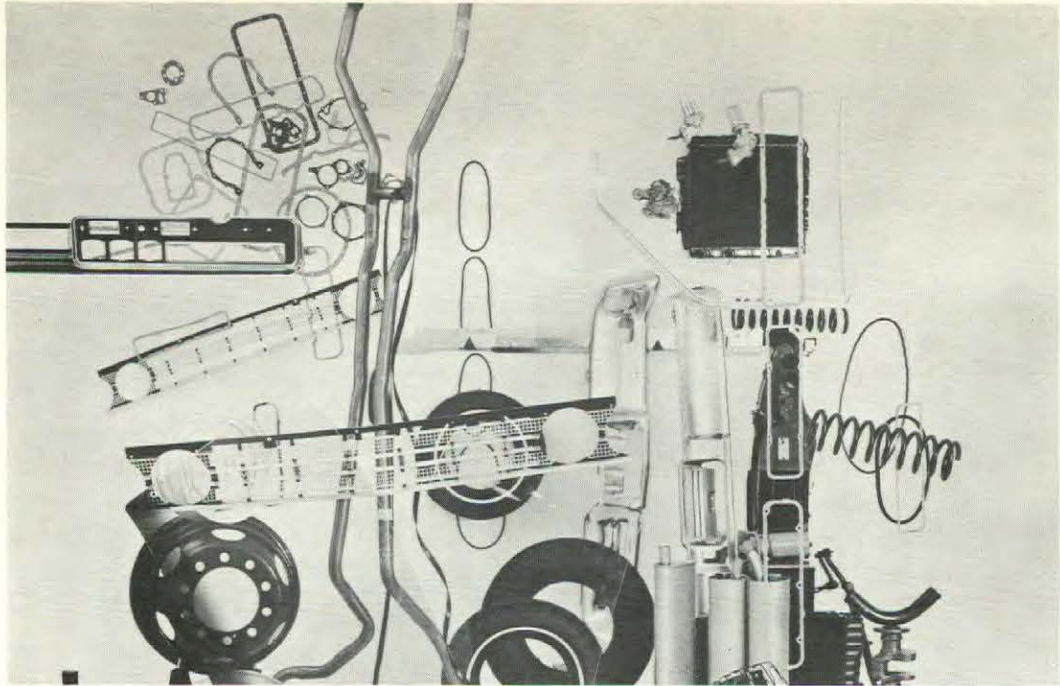

Canada and the United States have long been partners in this industry. We look forward to seeing you at the Canadian Exhibit where we believe you will gain a new awareness of the extent of Canadian capabilities.

A handwritten signature in black ink, appearing to read "H. S. Hay".

**CANADIAN
AUTO PARTS**

PARTNERS IN INDUSTRY

United States - Canada partnerships exist in many industries, each country complementing the other in specialized skills. The North American automobile industry is an excellent example. Its products have a world-wide reputation for quality and durability—both countries have contributed to that image.

Canada's automotive parts industry is particularly proud of the part it has played during 60 years of lively expansion.

About 350 Canadian plants employ approximately 55,000 people to produce automotive parts, materials and supplies for original equipment manufacturers. This of course does not include those employed by motor vehicle assembly companies, tire and rubber manufacturers and allied businesses.

Canada's automotive parts industry is geared to supply its own market—and to meet the growing demands of United States manufacturers. Speedy delivery of parts across the border is an important factor and most of Canada's automotive parts manufacturers are located within 200 miles of the largest U.S. automobile plants.

There are several good reasons why Canadian automotive parts manufacturers are able to supply U.S. needs for quality products.

The comparatively small size of Canada's industry allows short production runs as well as medium and large and gives manufacturers the ability to change quickly from one design to another as new developments occur. Many Canadian parts manufacturing companies are capable of all phases of production from raw stock to finished component. This compact, under-one-roof manufacturing capability facilitates maximum quality control.

Canadian parts manufacturers are playing an important role in the current drive for more safety features in autos with emphasis on quality materials and excellence of workmanship.

Since the beginning of the Canadian automotive industry, parts manufacturers have continually broadened their skills and versatility,

keeping pace with the dynamic growth of the automotive industry as a whole in Canada and the United States.

The first Canadian automobile is generally believed to have been an electric car made in Toronto in 1893 by The Dixon Carriage Works. The design was impractical and it never went into production.

Then came the first Canadian gasoline car, built by George Foot Foss in a bicycle repair shop in Sherbrooke, Quebec, in 1897.

But Canada really entered the North American automobile picture in 1904 when a group of businessmen from Windsor, Ontario, organized the Ford Motor Company of Canada to sell Ford products in the domestic market and in India, Australia, New Zealand and South Africa. At first the Canadian company only put bodies and wheels on car chassis which had been ferried across the river from the Ford plant in Detroit.

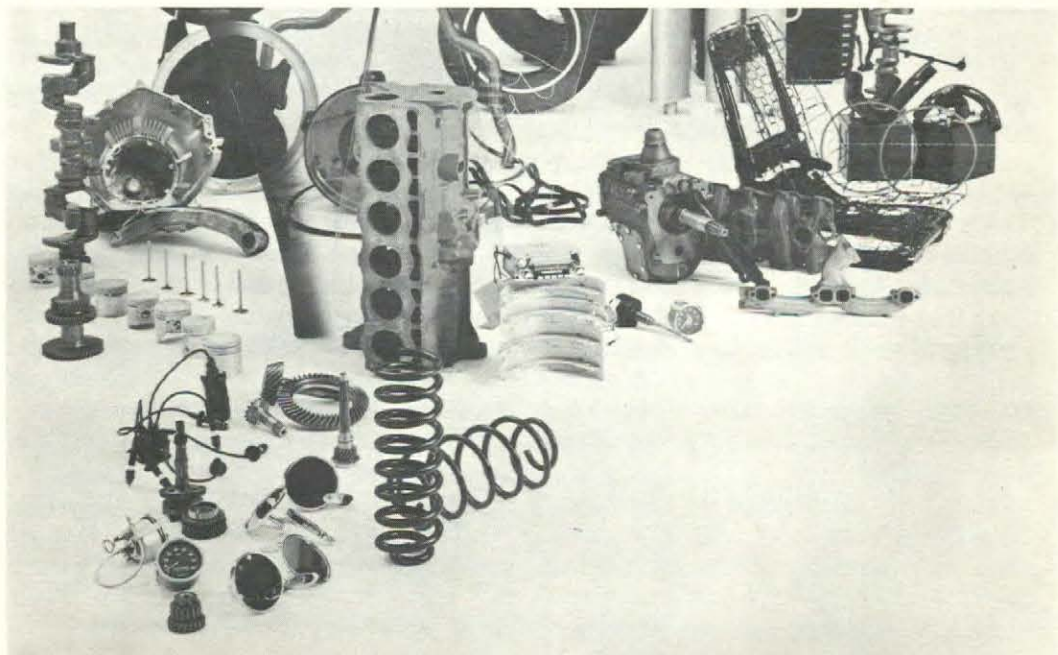

The Model F Buick car, designed and built in the carriage works of the McLaughlin Carriage Co., Oshawa, Ontario, was next on the Canadian scene. Its production led to the founding in 1907 of the Oshawa plant of the McLaughlin Motor Co. of Canada. This enterprising company soon contracted to buy engines from the Buick Motor Company in Flint, Michigan, with permission to use new products developed by the American company's research facilities.

McLaughlin founded a second company in 1915 and three years later the two were merged to become General Motors of Canada Limited, Oshawa.

Demand for automobiles increased over the years with Canada's population. The mileage of surfaced highways and rural roads grew in proportion. In 1926 there were 50,000 miles of surfaced roads and streets—in 1963 total mileage of paved Canadian roads and streets passed the 400,000 mark.

Today the motor vehicle manufacturing industry ranks as Canada's fifth largest in gross value of production. In 1965 seven leading manufacturers produced 710,711 cars and 144,765 commercial vehicles.

Tens of thousands of Canadian manufactured parts have been used in the construction of these automobiles and with increasing U.S. acceptance of made-in-Canada parts, the Canadian industry continues to grow along with the U.S. industry.

die castings

With recent plant expansions, modernization of equipment, and assured sources of raw materials, the Canadian die casting industry is capable of meeting the demand for quality automotive parts in the North American market. Many of Canada's die casting companies—already well established in the U.S.—are prepared to handle the constant change in design of automotive component parts by re-tooling whenever necessary.

Canadian die casters offer a new source of quality products in a complete range of die casting alloys for functional and decorative parts for the automotive industry in the United States.

As in the United States, the automotive industry in Canada continues to be the largest single consumer of zinc die castings which have excellent physical and mechanical properties. Electroplating, paint, or other high quality decorative finishes are easily applied.

Improved design and flexibility of style, combined with superior plating systems now available for zinc alloy die castings have resulted in automotive component parts of outstanding quality and performance.

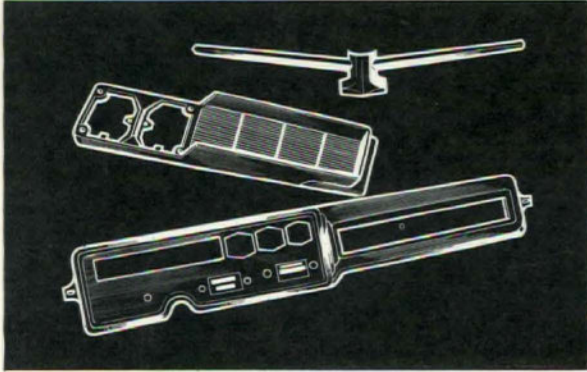

Lightweight aluminum and magnesium die castings are wide-

ly used in functional automotive parts and are produced in weights up to 20 pounds. Considerable new capacity for casting these alloys has been added to Canadian plants to meet the anticipated increase in domestic and export markets.

Canada's basic metal producers supply the die casting industry with metals of certified purity as well as technical services to help solve production problems. In turn, the ingot producers provide the die casting industry with alloys of certified composition and also check analyses of casting lots.

In addition to die casters, the industry consists of basic metals producers, die cast alloy producers and suppliers of alloy tool steels. It also maintains a die casting display used for educational purposes for technical students and industry personnel.

Highly versatile, the Canadian die casting industry is capable of producing long runs of components of consistent quality. It has much to offer the prospective buyer of die castings. The major portion of the industry is strategically located adjacent to the automotive industry in the United States allowing prompt delivery of goods.

ferrous parts

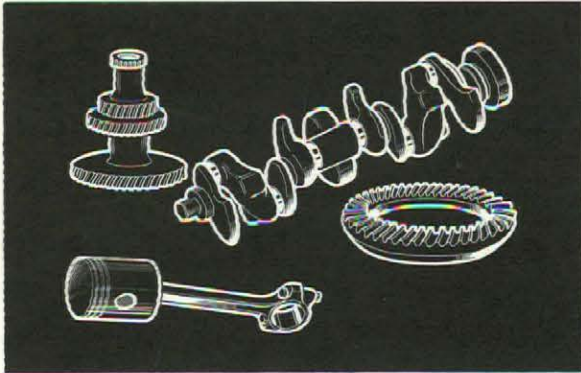

Canada's rapidly expanding iron and steel industry is based on a virtually unlimited supply of raw material. Although less than one-third of the land in Canada has undergone geological survey, known iron reserves are so vast that they cannot be measured. Current production of iron ore is more than 35,000,000 tons annually, with production expected to reach 50,000,000 tons by 1970. Much of the ore is exported in raw form, but Canada's iron and steel producers turn millions of tons into pig iron, steel and steel products each year.

Canada's automotive parts industry benefits from this source of supply. Canadian steel companies now produce more than

6,500,000 tons of pig iron and more than 10,000,000 tons of steel each year. Prospects for steel production by 1970 are estimated at 17,000,000 tons annually.

The tremendous growth rate of Canada's iron and steel industry reflects the enterprising management and advanced technology that have given many Canadian firms a world-wide reputation for excellence and diversity in their steel products.

Anticipating the demand from established markets and new customers — especially the automotive industry—Canada's iron and steel producers have spent more than a billion dollars in modernizing, expanding and setting up new plant facilities.

forgings

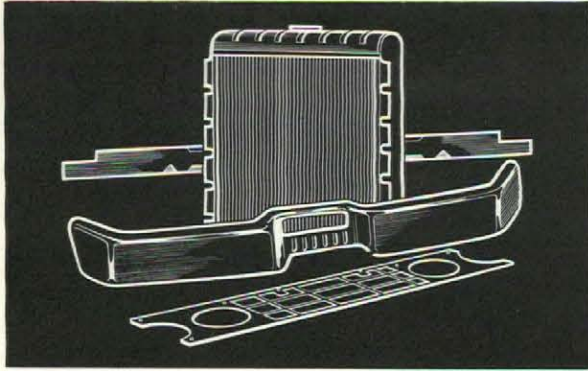

Canada's forgings industry has grown tremendously in the last 20 years under the impetus of Canada's general manufacturing expansion and increasing sophistication as an industrialized nation.

Highly diversified, the Canadian forgings industry is serving more and more firms in the automotive industry both in the United States and in Canada with an increasingly wide variety of forgings.

Modernization of methods and equipment, combined with the high quality of Canadian met-

als and meticulous attention to quality control, has placed Canadian forgings producers in an excellent position to serve a large cross-section of the U.S. automotive industry—whatever their need and wherever they may be located.

The Canadian forgings industry has the capability for high volume production as well as a special ability for economical, specialized short-run orders. Traditional Canadian craftsmanship and firm delivery dates will commend consideration of Canadian forgings by value-conscious U.S. automotive parts buyers.

non-ferrous parts

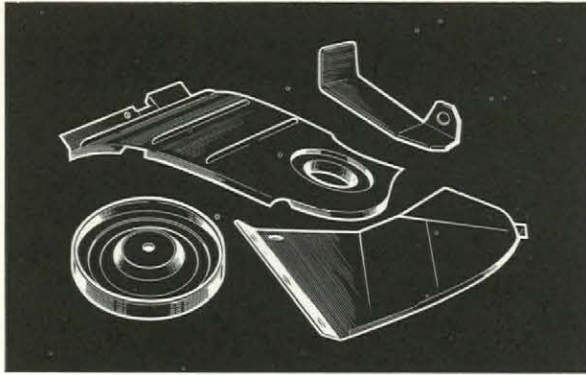

Canada, long a major source of non-ferrous ores and metals, is becoming increasingly important as a producer and supplier of raw materials for the automotive industry.

Canadian producers are able to provide custom services in addition to making competitively priced parts of the highest quality for a very broad range of U.S. users in the automotive field.

Each year the many progressive Canadian companies engaged in the automotive industry are

winning increasing numbers of customers in the United States because of the excellent quality of their materials and skill of their craftsmen.

Many of the companies which are listed in this booklet are already well established in export markets and are producing for the automotive program in the United States. Others with equally high quality products and services to offer are now in an excellent position to serve customers outside Canada and are seeking orders.

stampings

Decorative trim stampings and roll-formed moldings of steel, stainless steel and aluminum have been standard automotive production items in Canada for many years.

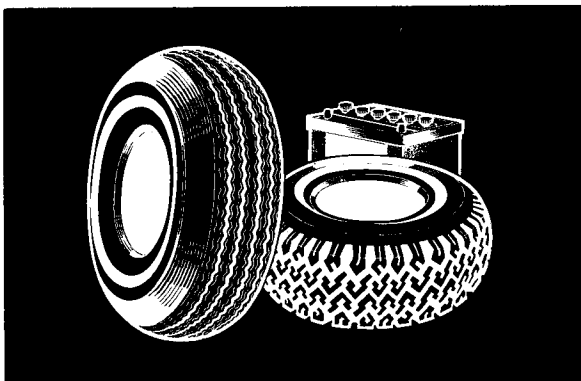

Numerous Canadian companies—ideally situated in Southwestern Ontario to facilitate shipment of goods to the United States market—have become specialists in the auto trim field and are well equipped with modern machines and up-to-date finishing facilities that meet the exacting auto specifications for both material and finish. Plating and anodizing facilities are integral or located nearby for convenience.

Approximately six Canadian companies specialize in making roll-formed shapes and moldings for the automotive industry.

These include windshield garnish moldings, wheel openings, vent window channels, body trim and grille bars—all in high volume production for most car models.

There are more than 60 experienced companies in Canada which constantly meet the ever-increasing demand for automotive stampings. These companies have ample capacity to supply orders for highly specialized short run items as well as high volume parts.

The Canadian stamping industry has a wide range of press sizes available to produce such trim products as scuff plates, escutcheons, hub caps, wheel covers, interior windshield corner posts, body stampings and chassis which are regular automotive production parts in Canada and the United States.

non-metallics

Canada's widespread automotive non-metallics industry is a vibrant and booming one.

The growth of the industry over the past five years has been phenomenal. The rubber industry, for example, has quadrupled in the past four years and sales this year are expected to rise sharply. In keeping with this growth pattern, Canada's rapidly expanding plastics industry has increased sales by 25 per cent since 1959, while production of adhesives, sealants, molded carpets, glass, batteries, brake linings and clutch facings has risen substantially.

The following is a comprehensive summary of the various segments of the Canadian non-metallics industry.

Rubber Parts and Tires

Primarily located in the Province of Ontario and within 200 miles of the principal United States automobile manufacturing centers, Canada's rubber industry is in an excellent position to supply goods to the U.S. automotive market.

Factory shipments of rubber products — excluding tires — rose from \$115 million in 1960 to a reported \$172 million in 1963 and should reach approximately \$250 million in 1966. The yearly output of the Canadian rubber industry was in excess of \$600 million during 1965 and at present is showing a rapid growth of approximately

20 per cent over the previous year.

Its principal components include pneumatic tires, tubes, molded and extruded rubber products, brake pads, oil seals, spark plug covers and engine mounts. The industry has the equipment, production facilities and technical skills to produce all types of molded and extruded rubber products. The working force of the industry is currently estimated at 30,000 employees.

Plastics

The group of injection molders participating in the development and molding of plastic parts for Canada's automotive industry has the experience and ability to meet the exacting production requirements of this thriving industry.

The design and development of new plastic materials have enabled the Canadian plastics industry to mold intricate and serviceable parts at low costs that satisfy customers in this demanding market. This special skill has accounted for the enormous growth from \$60 million in 1957 to \$90 million in 1961. With a projected growth of 10 to 12 per cent per year, estimated sales for 1966 should reach \$146 million.

Molded Carpets

Before 1966, the production of molded carpets in Canada was directly proportional to the increase of domestic passenger car

registration and manufacturing facilities were only adequate for domestic requirements. Recently, however, modern equipment has been added to Canadian plants enabling manufacturers to export \$1,250,000 worth of molded carpets in 1966. Sales in 1967 are expected to reach \$2,500,000, but existing open production capacity could double this volume on short notice.

Factories producing molded carpets are located in Quebec and Ontario. Both geographically and economically they are in an excellent position to serve the expanding needs of the North American automotive industry.

Adhesives and Sealants

Since 1960, the Canadian adhesives industry has embarked on a steady program of expansion which has resulted in factories increasing their shipments by more than 50 per cent—from \$24 million in 1960 to \$37 million in 1965. Preliminary estimates for 1966 shipments indicate a better than average increase.

A wide range of general and special purpose adhesives is available for bonding metal to metal; metal to rubber, plastics and insulation, and for bonding an almost endless variety of dissimilar metals one to the other, with formulations designed for high to low ambient temperatures. With the recent addition of several new manufacturers in the adhesive and sealant field, the industry's production capacity is expected to increase significantly.

Glass

Canada is a prime supplier of bent, flat, laminated, and toughened safety glass for the automotive trade. Canada's large and modern glass plants are fully equipped to fabricate and supply a high volume of original equipment safety glass parts for the passenger car, truck and bus industries, and to similar transport industries manufacturing off-highway, railroad and marine equipment. Complete facilities are maintained to supply

the aftermarket with service and replacement requirements.

Brake Lining and Clutch Facing

In Canada there are five factories located in Ontario and Quebec which serve the \$20 million annual market for these two major friction material products. Producing for both the original equipment and the replacement requirements of Canada's six million motor vehicles, companies manufacturing brake linings and clutch facings are well equipped to supply parts for all models of automobiles made in the United States and Canada. This industry has the experience, the ability and the open production capacity to provide prompt delivery on friction materials that meet the rigid specifications and requirements of the U.S. and Canadian automotive market.

Batteries

Canada's battery industry is composed of two sections—the replacement market and the original equipment market. In the last five years the replacement market has increased approximately 33 per cent, while the original equipment market increased 123 per cent.

Improvements in the design and quality of Canadian batteries—resulting in longer life and better performance—account for the much slower growth of the replacement market. The combined production of both these markets today represents a total of 3,350,000 units per annum.

The Canadian battery industry is not restricted to any one area in Canada. A total of 13 major manufacturing plants is established between Vancouver, British Columbia and Springhill, Nova Scotia. In addition, there are approximately 15 regional battery manufacturers. It is estimated that the Canadian production capacity for original equipment and replacement batteries today has a market value of \$40 million annually.

CANADIAN COMPANIES SUPPLYING AUTOMOTIVE PRODUCTS, MATERIALS AND SERVICES

Notes:—Not all of the products shown qualify for duty free entry under the Auto Pact as some are not fabricated or identifiable as automotive parts.

(S) indicates Canadian subsidiary of a foreign parent company.

Commercial Counsellor
Canadian Embassy
1746 Massachusetts Avenue, N.W.
Washington, D.C. 20036
Tel: DECATUR 2-1011 (Area Code 202)

visit 70 nations in one week

Would you like to contact 70 nations in one week in search of new business opportunities?

You'll be able to do just that in Canada this year at Canada's EXPO 67. To be held at Montreal, April 28 to October 27, EXPO 67 will be the 1967 World Exhibition of the First Category (so designated by the International Bureau of Exhibitions)—and 70 nations will be exhibiting there.

Expo's Business Development Bureau will make contacts with any or all of the participating countries for you. Simply register with the Bureau when you arrive and state your interests. The Bureau will arrange appointments with the people you want to meet.

An International Trade Center on the Expo site will provide private conference rooms, stenographic, translation and communications facilities. And twice a week there will be receptions for business visitors and exhibitors.

If an industrial tour of Canada interests you the Bureau will arrange one. Appointments with government officials and Canadian industry leaders may also be arranged.

Make EXPO 67 a must on your 1967 business calendar. Your nearest Canadian trade office will be happy to make arrangements for you.
