### INTRODUCTION

This listing includes all the identified Canadian automotive parts producing companies with employment levels in excess of 200. They are shown in descending size order.

It was prepared in January 1980 and with the rapidly changing patterns within the industry, some of the detail may now be out of date. A revised listing will be prepared once the 1980 edition of Scott's Industrial Directory for Ontario has been published. In the meantime, this listing will provide some rough guidance, especially with respect to relative sizes, products and locations.

Should any clarification of the content be required, it can be obtained by contacting the writer.
