- GERD Matrix Tables 1963 to 1978	15

SUMMARY

1. The national GERD series have been revised by the Science Statistics Centre and estimates for 1978 are now available. 1978 GERD is estimated at \$2,178 million.
2. The revisions to GERD are largely confined to higher estimates of R&D performed at universities and the addition of a private non-profit performing sector. Most of the increase to university R&D is attributable to a "funders approach" to sponsored R&D and changes in the aggregate estimate of R&D performed by universities.
3. In terms of percentage of GERD to GNP, the revised 1977 level of \$2,000 million represents 0.95 per cent of GNP, higher than previously estimated, and the 1978 ratio is 0.935 per cent.

Introduction

This paper presents revised GERD statistics prepared by the Science Statistics Centre, Statistics Canada.

These data are scheduled to appear in the Annual Review of Science Statistics, to be released in the new year.

The purpose of this review is to make the GERD statistics more readily available within the Ministry for review and comment.

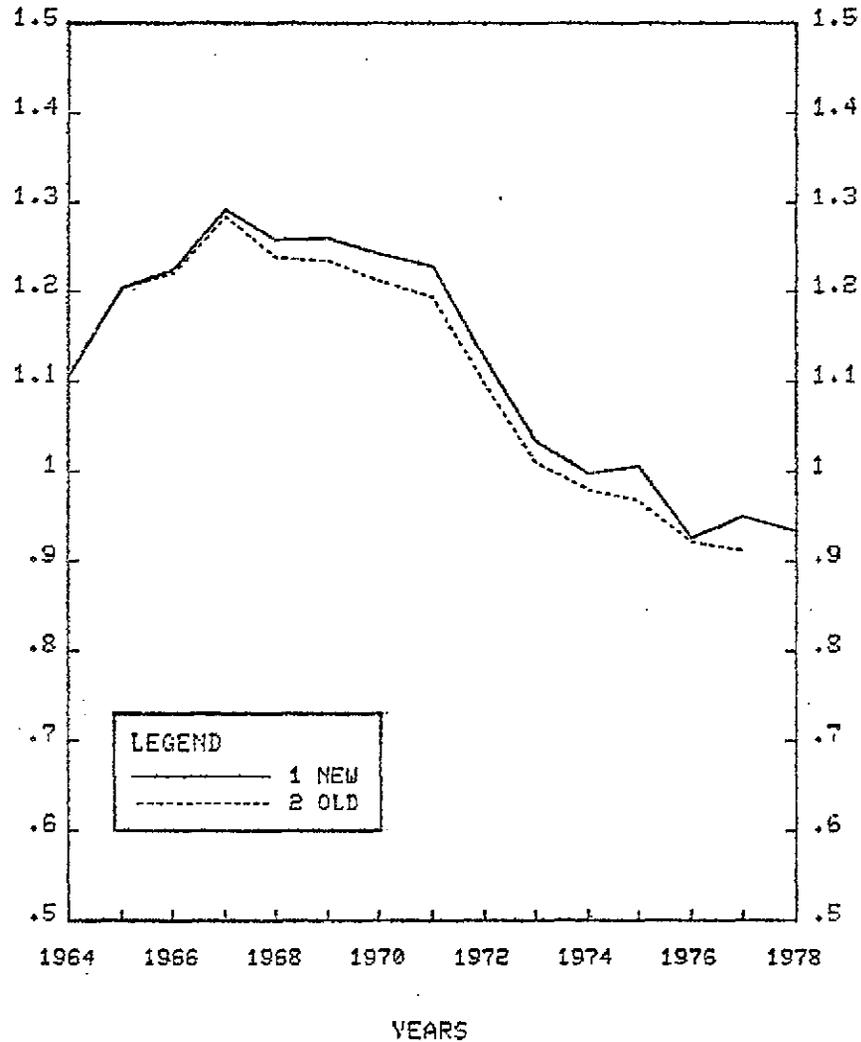

Comparison of Old and Revised GERD Series

Overview

Chart 1 shows the extent of the revision to GERD expressed as a percentage of GNP. As may be seen, the revised GERD estimates in total have raised the ratio of GERD to GNP in the period following 1967, with significant increases in 1975 and 1977. Table 1 shows the data underlying Chart 1.

R&D by Performer

Chart 2 shows the level of R&D in constant dollars by performer, 1964 to 1978, on a ratio scale to illustrate the real rate of change in the level of performance by sector. As may be seen, the general flat pattern of the early 1970s has continued in the revised series, with some evidence of an industry upturn apparent in the 1977 and 1978 data.

A major change in the new performer series is the addition of the private non-profit sector as a separate performer of R&D. Formerly, this sector was included in the University sector.

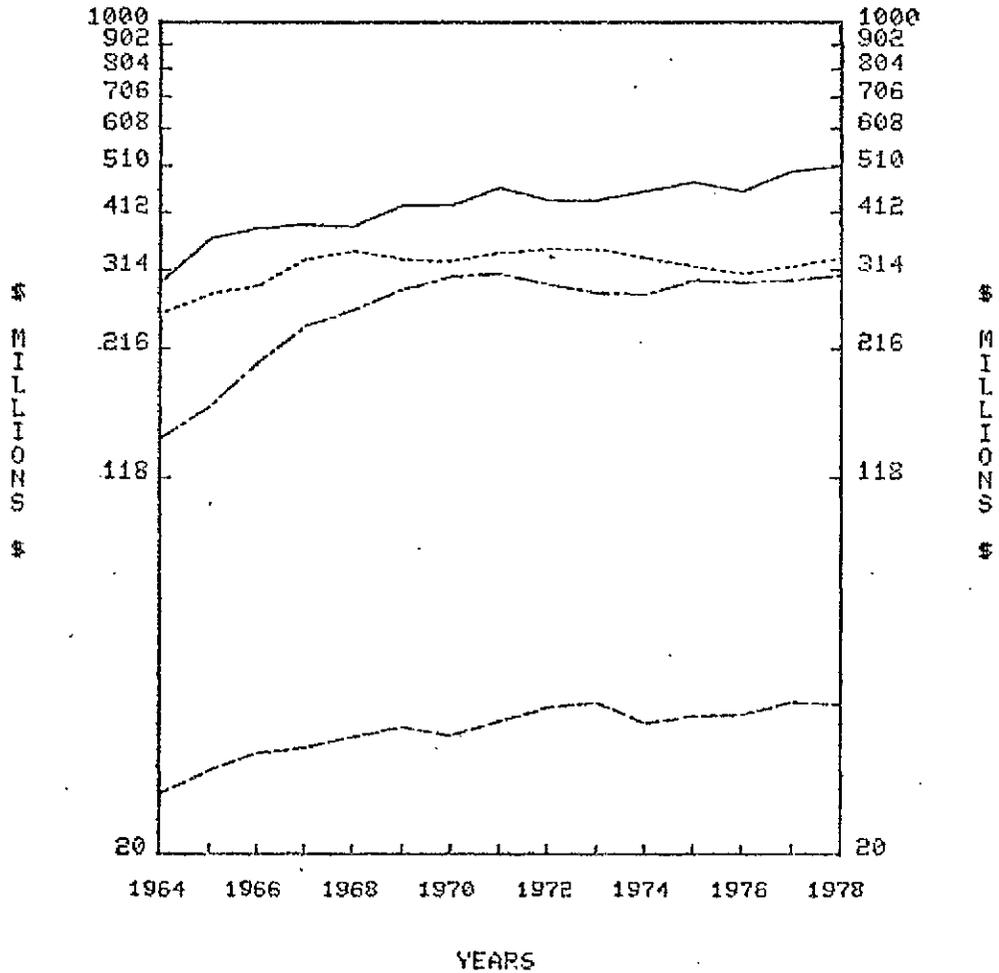

Table 2 compares the new performer data and the previous estimates by sector. As indicated, the only significant change is a sharp increase (about 7 to 8 per cent) in the level of R&D performed by universities and, as well, the addition of the PN-P sector to the performer data base. These increases are due to the adoption of a

"funders approach" to estimating the level of sponsored R&D performed by universities, and some refinement to the previous methodology of estimating non-sponsored university R&D based on estimates of "free-time research factors", the number of full-time university staff in the natural sciences, and a refined estimate of research-relevant operating and capital costs.

It should be noted that the bulk of the revisions to the GERD estimates are attributable to the changes made in the university R&D estimates.

R&D by Source of Funds

Chart 3 shows the revised source of funds series in constant 1971 dollars plotted on a ratio scale to highlight percentage rates of change. As may be seen, provincial funding for R&D has increased more rapidly than other sources during recent years, but significant increases are also evident for the federal government and industry.

Table 3 compares the new estimates of funders of R&D with the previous series. Substantial revisions, in percentage terms, have been made to the university-funded series (up by some 25 per cent in recent years) and in private non-profit and foreign funding (revised downward by about 15 per cent each in recent years).

1978 GERD Matrix

Table 4 shows the 1978 GERD matrix of performers of natural sciences R&D by source of funds. GERD is estimated at \$2,178 million in 1978, an increase of 8.9 per cent over the revised 1977 level of \$2,000 million. The level of GERD in 1978 represents 0.935 per cent of estimated GNP, a decrease from 0.95 per cent in 1977.

For reference purposes, Table A-1 in the Appendix provides a summary of GNE data in current and constant dollars covering the historical period 1963 to 1977 with forecasts from 1978 to 1985.

The forecasts were prepared by Government Branch based on consultations with the Department of Finance. The Appendix also includes revised GERD matrices for the 1963 to 1978 period.
