Estimates of Compliance Costs to Business Respondents, 2000

— Not for external dissemination —

This report presents an overview of the burden imposed on Canadian businesses as a result of Statistics Canada surveys. Such burden, measured in hours, is referred to as *compliance cost*. The focus of the present report is on business surveys conducted in the years 1999 and 2000. The report also includes a time-series covering the entire period from 1991. Two measures of compliance cost are used herein—the traditional measure, referred to as *potential compliance costs*, which is based on frequency, sample size and average-time-to-complete, and an alternate measure, referred to as *actual compliance costs*, which, in addition to the factors used in the traditional measure, also takes response rates into account. Compliance costs are measured for all business surveys, for surveys by type (whether the activity is new, ongoing, or discontinued), by subject matter division and by the size of the responding business. This report complements the information provided in the annual Departmental Performance Report to Parliament and is intended primarily for an internal audience.

Estimates of Compliance Costs to Business Respondents, 2000

Introduction

This report presents an overview of the burden imposed on Canadian businesses as a result of Statistics Canada surveys conducted in calendar year 2000. Such burden may be described as the cost, in hours, on businesses incurred as a result of Statistics Canada's survey activity. This burden is referred to herein as *compliance cost*.

The analysis indicates that overall compliance cost has decreased slightly in the past year. Previously, overall compliance costs had been increasing moderately since the inception, in 1997, of the Unified Enterprise Survey (UES) through the Project to Improve Provincial Economic Statistics (PIPES). However, despite the decline in 2000 and the increasing use of administrative data instead of survey-based information, the costs being imposed on small businesses have been steadily increasing. This contrasts sharply with the decreasing burden imposed on large businesses.

Two measures of compliance cost are used in this report (see text box below). One measure, referred to as *Potential Compliance Costs* (or *Potential Costs*), takes into account sample size, survey frequency and average-time-to-complete. It can be viewed as a measure of the burden we are asking the business community to assume. The other measure, referred to as *Actual Compliance Costs* (or *Actual Costs*), is the same as the first measure except that response rates are also taken into account. It can be viewed as a measure of the burden that has been accepted by the business community in responding to our surveys. In the past, emphasis was given almost entirely to Potential Compliance Costs. However, in this report, Actual Compliance Costs have been given increased prominence in the tables and analysis of the current report. Plans for the coming year call for research as well as for structured discussion and analysis within Statistics Canada to try to move toward more accurate and generally-accepted measures for future reports.

The compliance cost estimates contained in this report were obtained from each business-related survey-taking division in the Agency. The sample size, survey frequency, and the response rate components of these measures are well defined. However, the means of calculating average-time-to-complete (referred to herein as *response time*) vary considerably from division to division. The Ombudsman's Office hopes to undertake research on how divisions currently calculate response time. This would be a first step towards the establishment of an Agency standard.

Wayne Baxter,
Acting Ombudsman for Small Business

Executive Summary

- In 2000, Potential Compliance Costs decreased by 3,533 hours, or 0.5%. For small businesses there was an increase from 1999 of 12,160 hours or 4.2%. For large businesses, Potential Costs were down 15,693 hours or 3.2%.
- Since 1996, Potential Compliance Costs have increased 6.5% overall. During this period, the costs for small businesses rose 37.6%, compared to a decline of 7.0% for large businesses. (Similar time-series on an Actual Compliance Costs basis are not available.)
- The 3,533 hour decrease in Potential Compliance Costs in the year 2000 can be viewed as consisting of two components—the changes associated with (1) those surveys conducted in both 1999 and 2000 (i.e. “ongoing” surveys) and (2) those that were carried out in either 1999 or 2000, but not in both years (i.e. “non-ongoing” surveys):
 - Considerable progress was made in reducing burden for ongoing surveys. For ongoing surveys, Potential Compliance Costs declined for all businesses by 22,724 hours or 3.1%, and by 3.6% for small businesses. The declines reflect comparable reductions in sample sizes.
 - However, the reduction in Potential Compliance Costs for ongoing surveys was offset by a net increase of 19,191 hours for non-ongoing surveys. Surveys conducted in 1999 but not in 2000 represented a drop of 36,616 hours, while surveys conducted in 2000 but not in 1999 represented an addition of 55,807 hours. In other words, the increases were about fifty percent more than the decreases.
 - The non-ongoing surveys impacted heavily on both small and large businesses. For small business, surveys conducted in 1999 only represented a decrease in Potential Compliance Costs of 17,425 hours, compared to an increase of 39,301 hours due to surveys conducted in 2000 only. This represents a net increase of almost 22,000 hours. For large businesses, surveys conducted in 1999 only accounted for a decrease in Potential Compliance Costs of 19,191 hours and those conducted in 2000 only accounted for an increase of 16,506 hours—this produced a net decrease of nearly 2,700 hours.
 - The two largest non-ongoing surveys were the reinstated Survey of the Construction Industry and the Farm Financial Survey. Both were conducted in 2000 only. The former is conducted triennially (with tax data used in the off-years) and the latter is conducted biennially. Together, these two surveys contributed 25,662 hours for small business, 8,157 hours for large businesses, and 33,819 hours overall. For surveys, such as these, conducted less frequently than annually, the full burden is reflected in the year the survey is conducted and is not averaged across intervening years.
- In 2000, Actual Compliance Costs—this is the measure that takes response rates into account—declined by 6.3% for all businesses. This corresponds to a 4.7 percentage point decline in response rates from 1999. For small businesses, a 4.1 percentage point decline in response rates converted the 4.2% increase in Potential Costs into a 1.1% decrease in Actual Compliance Costs.

- Of all 216 business surveys run in 2000, the top three (in terms of compliance costs) accounted for roughly one quarter of total burden, regardless of which measure is used. This was also the case in 1999. The top three surveys in 2000—the Quarterly Survey of Financial Statistics, the Monthly Retail Trade Survey, and the Annual Survey of Manufactures—were also top three in 1999. Each of these three experienced some reduction in compliance cost in 2000 relative to 1999.

Measures of Compliance Cost

Compliance cost may be described as the cost, in hours, to business, of Statistics Canada's survey activity.

This report uses two different approaches to estimating such cost. The real cost is not known. One measure, referred to as *Potential Compliance Cost*, treats compliance cost as the total burden imposed on business regardless of whether businesses choose to accept that burden. To that extent, it can be seen as an overstatement of cost. The other measure used here, referred to as *Actual Compliance Cost*, takes account of whether businesses choose to comply with Statistics Canada's requests for information. Both measures understate costs to the extent that they do not account for hours spent by businesses in responding to Statistics Canada's collection and edit follow-up activities.

Potential Compliance Cost is the product of sample size, frequency and average hours to complete. If sample size is 100 businesses, and frequency is 12 times per year, and average time to complete is one hour, the Potential Compliance Cost is 1200 hours. This measure was referred to as *Standard Compliance Cost* in previous editions of this annual report.

Actual Compliance Cost is a measure that take into account response rates and thereby reflects the fact that not all survey forms are completed and returned. This measure is the same as the first one except that it also takes response rates into account. In other words, it is the product of sample size, frequency, average hours to complete *and* response rates. In terms of the previous example, if the response rate is 80%, the Actual Compliance Cost is 960 hours. This measure was referred to as *Alternate Compliance Cost* in previous editions of this report.

For more information on measures of response burden, see *Monitoring the Performance of a National Statistical Institute* (Statistics Canada, Ottawa).

Other Concepts and Definitions:

Small business:

- In this report, a small business is one that has gross business income (GBI) of less than \$2 million dollars.

Time period:

- In this report, surveys are classified according to the year in which they were conducted, not according to the calendar year for which they collect data. The focus is on when compliance costs were incurred. For example, the burden hours associated with a survey conducted in 2000 are considered 2000 costs, regardless whether the survey itself requests data for 1999, for 2000, or for some other calendar year.
- If a survey is conducted across more than one calendar year, the survey is classified according to the year in which most of the survey-taking activity occurred. For example, if for a given survey, some questionnaires were completed in December 1999 and the bulk were completed in first few months of 2000, the survey (and its compliance costs) would be classified to 2000.
- If a survey is conducted less frequently than annually, the same rules apply: the survey is classified according to the year in which it was conducted (or in which most of the survey-taking activity occurred). Compliance costs are assigned to that one year only and costs are not averaged across intervening years between surveys. To give an example, the Farm Financial Survey is a biennial and was most recently conducted in 2000. The costs associated with that most recent edition of this survey are assigned to 2000 only; they are not averaged across intervening years—1999 in this case—in which the survey was not conducted.

Section 1: Overview

Potential Compliance Costs for business surveys conducted by Statistics Canada in 2000 stood at 767,857 hours.¹ This was a decrease of 3,533 hours—or 0.5%—over business surveys conducted in 1999 for which compliance costs were 771,390 hours. Actual Compliance Costs in 2000 fell by 38,882 hours—or 6.3%—from 1999 levels. Between 1999 and 2000 response rates on business surveys fell from 79.9% to 75.2%—a drop of 4.7 percentage points.

In 2000, for small enterprises, there was an increase of 12,160 hours (Potential) and a decrease of 2,569 hours (Actual). Response rates for small enterprises declined 4.1 percentage points, from 79.7% to 75.6%. For large enterprises, there was a compliance cost decline of 15,693 hours (Potential) or 36,313 hours (Actual). Response rates for large enterprises declined 5.1 percentage points, from 80.0% in 1999 to 75.0% in 2000 (the discrepancy is due to rounding).

The 2000 results reflect some reversal of a longer-term trend. Since 1996 (see Tables 1, 2 and 3), Potential Compliance Costs have risen steadily, increasing 6.5% overall. During this period, the costs for small businesses rose 37.6%, compared to a decline of 7.0% for large businesses. (Actual Costs data are unavailable for this longer period.)

Analysis by type of survey

In comparing burden for surveys conducted in 1999 and/or 2000, this report distinguishes three types of surveys:

- those conducted in both 1999 and 2000
- those conducted in 2000 only
- those conducted in 1999 only

Surveys conducted in both years are referred to herein as “ongoing” and may be associated with increased, decreased or unchanged costs. Surveys conducted in 2000 only are, by definition, associated with an increase in compliance costs relative to 1999. Surveys conducted in 1999 only are, by definition, associated with a decrease in costs from the perspective of the year 2000.

Surveys conducted in both 1999 and 2000

There were 203 business surveys² conducted in both 1999 and 2000. In aggregate, Potential Compliance Costs for this group declined by 22,724 hours—a drop of 3.1%. This drop in costs for the surveys common to both years was due to an overall 4.0% decline in sample size. Survey frequency (2.6) and average-time-to-complete (0.6 hours) were virtually identical in the two years. (See text box on page 5 for an explanation of Potential and Actual Compliance Costs.)

¹ As in the past, the compliance cost estimates in this report exclude surveys conducted by the International Trade Division (ITD). This approach has been adopted because ITD data are derived entirely from administrative sources and is the one followed in Statistics Canada’s annual report to Parliament. It is estimated that compliance costs for ITD’s four survey-like vehicles were 19,763 hours in 1999 and 19,806 hours in 2000. Also excluded from the totals presented in this report are costs relating to occasional surveys, conducted on a cost-recovery basis; for those surveys, compliance costs are given in Table 6.

² In classifying surveys to produce these counts—the 233 surveys comprise 13 surveys conducted in 2000 only, 17 conducted in 1999 only and 203 conducted in both years—surveys which were restructured are treated as ongoing. For example, the Survey of Aquaculture, which was conducted as a single survey in 1999 and was split into Aquaculture, Part 2 and Aquaculture, Part 3 in 2000, has been treated as a single ongoing survey, rather than as two new surveys and one discontinued survey.

For ongoing surveys, Actual Compliance Costs declined by 46,140 hours—7.9%—between 1999 and 2000. The decrease reflects the same elements—decreased sample size, unchanged survey frequency, unchanged time-to-complete—that affected Potential Compliance Costs. The decrease in Actual Costs also reflects the fact that response rates for surveys conducted in both 1999 and 2000 declined 3.9 percentage points overall.

Surveys conducted in 2000 only

There were 13 business surveys conducted in 2000 that had not been conducted in 1999. Together these added 55,807 hours (Potential) and 36,808 hours (Actual) of compliance cost. For small enterprises, this meant an additional 39,301 hours (Potential) or 25,473 hours (Actual). For large enterprises, there were an additional 16,506 hours (Potential) or 11,335 hours (Actual). The differences between the two measures and between the small and large enterprises reflect a relatively low overall response rate—66.0%—and differing rates for small and large enterprises—64.8% versus 68.7%, respectively.

Surveys conducted in 1999 only

There were 17 business surveys conducted in 1999 that were not conducted in 2000. Together these removed 36,616 hours (Potential) and 29,550 hours (Actual) of compliance cost. For small enterprises, this meant a reduction of 17,425 hours (Potential) and 14,330 hours (Actual). For large enterprises, there was a reduction of 19,191 hours (Potential) and 15,220 hours (Actual).

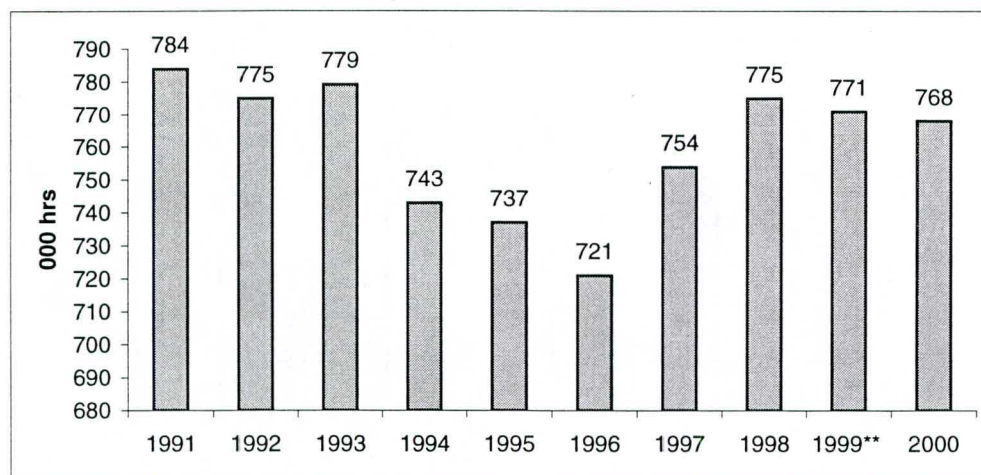

Conclusion

In 2000, Potential Compliance Costs decreased by 0.5%. This can be decomposed into costs associated with ongoing surveys and those associated with surveys that were run in only one of the two years. The costs associated with ongoing surveys decreased by 3.1% between 1999 and 2000 due to sample size decreases. However, the costs associated with non-ongoing surveys increased—the burden hours added by surveys run only in 2000 are roughly one and a half times the burden hour reductions resulting from surveys run only in 1999. See Figure 1 for a graphic presentation of these dynamics:

Since 1996, Potential Compliance Costs increased by 6.5%. Costs for small businesses rose 37.6%, while costs for large businesses declined by 7.0%.

In 2000, Actual Compliance Costs decreased by 6.3%. In this case, the decline in costs associated with surveys conducted in both 1999 and 2000—7.9%—is more pronounced due to the decline in response rates. In addition, the burden hours added by surveys run only in 2000 are about one third larger than the burden-hour reductions resulting from surveys run only in 1999.

Figure 1: Potential Compliance Costs—Dynamics, 1999 to 2000

Section 2: Summary of Change by Division

Agriculture Division

All business

- increase in Potential Compliance Costs of 11,151 hours, +19.2%
- increase in Actual Compliance Costs of 5,184 hours, +9.2%

Small business

- increase in Potential Compliance Costs of 11,071 hours, +19.5%
- increase in Actual Compliance Costs of 5,153 hours, +9.4%

For surveys run in both 1999 and 2000, there was a Potential Cost reduction of 1,957 hours (3.4%). This was due to sample size reductions in several surveys. The Census of Agriculture, conducted every five years, provides the database for many agriculture surveys. As the next census year approaches, there are no new farms selected for the annual surveys—and, as a result of the natural process of out-of-business and out-of-scope, the sample size decreases. This translates into reductions in compliance cost. On an Actual Cost basis, the decrease was even more pronounced—5,459 hours or 9.7%—due to a 6.6 percentage point drop in response rates.

Surveys run in 2000 only—the Farm Financial Survey and the Farm Update Survey—were the source of compliance cost increases of 13,518 hours (Potential) and 11,044 (Actual).

Surveys run in 1999 only—the Survey of Wage Rates for Hired Farm Labour, and Census Testing activity—were the source of compliance cost decreases of 410 hours (Potential) and 401 hours (Actual).

Balance of Payments Division

All business

- decrease in Potential Compliance Costs of 2,678 hours, -6.7%
- decrease in Actual Compliance Costs of 4,033 hours, -13.4%

Small business

- decrease in Potential Compliance Costs of 1,704 hours, -42.2%
- decrease in Actual Compliance Costs of 1,455 hours, -48.4%

All 29 surveys conducted by this division in 2000 were run in both 1999 and 2000. On a Potential Compliance Costs basis, the most significant decrease—1,066 hours, 11%—was in Transactions Between Canada and Other Countries (BP-21). The decrease was due to a 533-unit reduction in sample size, most of which involved small enterprises. On an Actual Compliance Costs basis, the most significant decrease was in International Transactions in Services (BP-17, 21S). In this case, the decrease was 1,226 hours or 16.2%. The decrease was due to a 159-unit reduction in sample size and a 9.6 percentage point decrease in response rates.

Culture, Tourism and the Centre for Education Statistics Division

All business

- decrease in Potential Compliance Costs of 10,861 hours, -61.7%
- decrease in Actual Compliance Costs of 9,498 hours, -59.8%

Small business

- decrease in Potential Compliance Costs of 9,906 hours, -63.2%
- decrease in Actual Compliance Costs of 8,554 hours, -61.1%

The decline in compliance costs in this division was dominated by the four surveys conducted in 1999 only. Together, these were the source of decreases of 10,995 hours (Potential) and 9,642 hours (Actual). Based on either measure of compliance cost, the most significant of these was the Periodical Publishing Survey—6,236 hours (Potential) and 5,532 hours (Actual). No surveys were run in 2000 only. The five ongoing surveys combined for a slight cost increase—134 hours (Potential) and 144 hours (Actual)—between 1999 and 2000.

For small business, the decline in compliance costs in 2000 was also dominated by the four surveys conducted in 1999 only. Together, the four were the source of a decrease in small business costs of 9,843 hours (Potential) and 8,507 hours (Actual). Based on either measure, the most significant was the Periodical Publishing Survey—5,868 hours (Potential) and 5,164 hours (Actual). Within the five ongoing surveys, there was a decline of 63 hours (Potential) and 47 hours (Actual) for small businesses.

Distributive Trades Division

All business

- increase in Potential Compliance Costs of 3,861 hours, +2.9%
- decrease in Actual Compliance Costs of 4,048 hours, -3.7%

Small business

- increase in Potential Compliance Costs of 3,861 hours, +8.0%
- decrease in Actual Compliance Costs of 499 hours, -1.2%

Surveys conducted by this division in both 1999 and 2000 experienced a 4.1 percentage point drop in response rates. This converted a slight increase in Potential Compliance Costs—45 hours—into a considerable drop—5,364 hours—in Actual Costs. The response rate decline was particularly pronounced in the Retail Chains Survey, Part 2 (a drop of 31.0 percentage points), in the Retail Store Survey, Parts 2 and 3 (a drop of 27.4 percentage points) and in the Survey of Head Offices (a drop of 25.0 percentage points). These three surveys are all part of the Unified Enterprise Survey (UES).

The Non-Store Retail Survey was reinstated and integrated into the Unified Enterprise Survey in 2000. This resulted in an increase in compliance costs of 3,816 hours (Potential) and 1,317 hours (Actual). This was the only survey run in 2000 only. No surveys were run in 1999 only.

For small business, Potential Compliance Costs associated with ongoing surveys increased by 789 hours (1.6%). On an Actual Cost basis, there was a decrease of 1,543 hours (-3.7%). Small business response rates fell by 4.5 percentage points. The response rate decline was particularly pronounced in the Retail Store Survey, Parts 2 and 3 (30.0 percentage points) and in the Wholesale Trade Survey, Parts 2 and 3 (8.0 percentage points). Small business response rates

were not a factor for the Retail Chains Survey, Part 2 and the Survey of Head Offices since neither of these surveys includes small businesses.

The data for 1999 for this division have been revised. The response time estimates for large businesses covered by the Wholesale Trade Survey have been revised from one hour per business to two hours per business. This led to an increase in Potential Cost at the divisional level of approximately 2,000 hours, and in Actual Cost of approximately 1,000 hours.

Environment Accounts and Statistics Division

All business

- increase in Potential Compliance Costs of 891 hours, +21.8%
- increase in Actual Compliance Costs of 1,187 hours, +40.4%

Small business

- decrease in Potential Compliance Costs of 2,065 hours, -99.3%
- decrease in Actual Compliance Costs of 1,479, -99.3%

There were no ongoing surveys. There was one survey conducted in 2000 only. This was the Survey of Environmental Protection Expenditures. It produced an increase in compliance costs of 4,971 hours (Potential) and 4,124 hours (Actual). Two other surveys, both run in 1999 only, resulted in a cost decline of 4,081 hours (Potential) and 2,938 hours (Actual).

For small business, there was a cost decrease of 2,080 hours (Potential) and 1,490 hours (Actual) attributable to the two 1999-only surveys. Small businesses were virtually unaffected by the new Survey of Environmental Protection Expenditures—14 hours (Potential) and 10 hours (Actual)—as that survey is almost exclusively limited to large enterprises.

The 1999 compliance cost data for Statistics Canada business did not include the activities of this division. The data have now been revised to do so. As a result, compliance cost totals have increased by approximately 4,000 hours (Potential) and 3,000 hours (Actual).

Income Statistics Division

All business

- decrease in Potential Compliance Costs of 6,942 hours, -83.4%
- decrease in Actual Compliance Costs of 4,454 hours, -78.0%

Small business

- unchanged Potential Compliance Costs of 0 hours
- unchanged Actual Compliance Costs of 0 hours

The main source of the sharp decline in costs reflected in the first two bullets (above) was not running the Survey of Trusteed Pension Funds in 2000. This was the source of a compliance cost reduction of 6,902 hours (Potential) and 4,417 hours (Actual). No surveys were conducted in 2000 only. There was one ongoing survey—the Quarterly Survey of Trusteed Pension Funds. It experienced a slight cost decrease—40 hours (2.8%, Potential) or 36 hours (2.8%, Actual)—due to a small reduction (5 units, -2.8%) in sample size.

In 1999 and 2000, the surveys of this division did not include small enterprises.

Industrial Organization and Finance Division

All business

- decrease in Potential Compliance Costs of 2,100 hours, -1.5%
- decrease in Actual Compliance Costs of 13,325 hours, -13.9%

Small business

- decrease in Potential Compliance Costs of 27 hours, -100%
- decrease in Actual Compliance Costs of 21 hours, -100%

No surveys were conducted in 1999 only or in 2000 only. There were five surveys conducted in both 1999 and 2000. The most significant change (on either basis of compliance cost) involved Quarterly Financial Statistics for which compliance costs declined by 2,790 hours (-2.8%, Potential) and 11,727 hours (-16.3%, Actual). This survey experienced a decrease in sample size of 155 units and a 10.0 percentage point drop in response rates. Also showing significant change was the Quarterly Supplement for the Unified Enterprise Survey, for which the cost declined by 622 hours (-12.0%, Potential) and 2,335 hours (-54.9%, Actual). In this case, there was a decrease in sample size of 622 units and a 40.0 percentage point drop in response rates.

In 1999, small enterprises were included in only one survey, the Annual Survey of Deposit-Accepting Institutions. This involved compliance costs of 27 hours (Potential) and 21 hours (Actual). In 2000, no small enterprises were included in the surveys of this division.

Investment and Capital Stock Division

All business

- unchanged Potential Compliance Costs
- unchanged Actual Compliance Costs

Small business

- unchanged Potential Compliance Costs
- unchanged Actual Compliance Costs

There were eight surveys conducted in both 1999 and 2000. All of these reported unchanged compliance costs. No surveys were conducted in 1999 only or in 2000 only.

Labour Statistics Division

All business

- decrease in Potential Compliance Costs of 5,275 hours, -20.8%
- decrease in Actual Compliance Costs of 6,961 hours, -29.0%

Small business

- decrease in Potential Compliance Costs of 1,985 hours, -18.7%
- decrease in Actual Compliance Costs of 2,441 hours, -24.8%

Two surveys were conducted by this division—the Survey of Employment, Payrolls and Hours (SEPH) and the Workplace and Employee Survey (WES). These were conducted in both 1999 and 2000. The bulleted data (above) are based on these two surveys. For WES, there was a reduction in average-time-to-complete of almost an hour (56.9%). For SEPH, there was a 12.1 percentage point reduction in response rates.

The 1999 data for this division have been revised. This resulted in a decrease in costs of approximately 13,000 hours (Potential), and 11,000 hours (Actual).

Manufacturing, Construction and Energy Division

All business

- increase in Potential Compliance Costs of 13,117 hours, +10.7%
- increase in Actual Compliance Costs of 3,018 hours, +2.7%

Small business

- increase in Potential Compliance Costs of 9,712 hours, +51.0%
- increase in Actual Compliance Costs of 3,623 hours, +20.8%

Two new surveys collectively increased costs by 22,877 hours (Potential) and 14,042 hours (Actual). The Survey of the Construction Industry accounted for 22,781 hours (Potential) and 13,946 hours (Actual). This survey is run every three years, with the data being derived from administrative sources in off-years. The Coke Monthly accounted for the remaining 96 hours (Potential and Actual).

Two surveys were conducted in 1999 only. These two, the Monthly Survey of Manufacturing (MSM) Parallel Run and the survey covering Contract Drilling and Services to Oil and Gas Extraction, were the source of a compliance cost reduction of 7,214 hours (Potential) and 6,072 hours (Actual).

Forty-one surveys were conducted in both 1999 and 2000. These, combined, showed a cost decrease of 2,545 hours (-2.2%, Potential) and 4,952 hours (-4.6%, Actual). On either basis, the most significant sources of change were the Monthly Survey of Manufacturing—a decrease of 1,289 hours (4.9%, Potential) and 2,303 hours (9.3%, Actual)—and the Annual Survey of Manufactures—a decrease of 1,121 hours (2.3%, Potential) and 2,528 hours (5.6%, Actual). The former experienced a sample size reduction of 537 units and a response rate decrease of 4.3 percentage points. The latter had a sample size reduction of 535 units and a response rate decrease of 3.1 percentage points.

For the smaller enterprises surveyed by this division, ongoing surveys showed a decrease of 874 hours (5.9%, Potential) and 1,717 hours (12.1%, Actual). Surveys run only in 2000 increased compliance costs by 14,683 hours (Potential) and 8,586 hours (Actual)—all of these hours accounted for by the Survey of the Construction Industry. The other 2000 only survey, the Coke Monthly, did not impact on small business. Not conducting either the MSM Parallel Run or the survey covering Contract Drilling and Services to Oil and Gas Extraction reduced small business burden by 4,096 hours (Potential) and 3,246 hours (Actual).

Prices Division

All business

- decrease in Potential Compliance Costs of 145 hours, -2.5%
- decrease in Actual Compliance Costs of 79 hours, -1.4%

Small business

- decrease in Potential Compliance Costs of 34 hours, -4.0%
- decrease in Actual Compliance Costs of 24 hours, -3.1%

Eight surveys were conducted by this division in both 1999 and 2000 and, for these, change was negligible. No surveys were conducted in 1999 only or in 2000 only.

Science, Innovation and Electronic Information Division

All business

- decrease in Potential Compliance Costs of 8,890 hours, -35.9%
- decrease in Actual Compliance Costs of 6,968 hours, -36.4%

Small business

- decrease in Potential Compliance Costs of 1,182 hours, -19.8%
- decrease in Actual Compliance Costs of 241 hours, -6.2%

One survey—the Biotechnology Use and Development Survey—was conducted by this division in 2000 only and accounted for a cost increase of 1,685 hours (Potential) and 1,112 hours (Actual). Three surveys were run in 1999 only. These accounted for a decrease of 6,261 hours (Potential) and 5,560 hours (Actual).

For the seven surveys conducted in both 1999 and 2000, there was a cost decline of 4,314 hours (23.3%, Potential) and 2,520 hours (18.6%, Actual). The most significant change (on either basis) involved the Survey on Information and Communications Technologies and Electronic Commerce (ICTEC) which was run in 2000 as the Survey of Electronic Commerce and Technology (SECT). For this survey, there was a cost decline of 3,907 hours (61.3%, Potential) and 1,869 hours (49.8%, Actual). This redesigned survey experienced a decrease in sample size of 4,962 units (-19.5%), a decrease in average-time-to complete of 0.13 hours (-52.0%), and an increase in response rates of 17.7 percentage points.

Service Industries Division

All business

- increase in Potential Compliance Costs of 7,670 hours, +15.3%
- increase in Actual Compliance Costs of 5,010 hours, +12.9%

Small business

- increase in Potential Compliance Costs of 5,643 hours, +19.4%
- increase in Actual Compliance Costs of 4,557 hours, +23.0%

Five surveys were conducted in 2000 only, increasing overall costs by 8,295 hours (Potential) and 4,786 hours (Actual). The difference between the two measures of compliance costs is due to the relatively low response rates—these averaged 57.7%. The two largest surveys (on either basis) were Repair and Maintenance, Auto and Repair and Maintenance, Other. On a Potential Cost basis, these accounted for 3,252 and 2,939 hours, respectively. On an Actual Cost basis, they accounted for 1,517 and 1,165 hours.

Two surveys were conducted in 1999 only. These were Employment Services, Parts 2 and 3, and Specialty Publishers. Together these reduced costs by 634 hours (Potential) and 481 hours (Actual).

For the twenty-four surveys conducted in both 1999 and 2000, offsetting increases and decreases resulted in virtually unchanged Potential Compliance Costs—up 8 hours (0%)—and an increase in Actual Compliance Costs of 706 hours (1.8%). The differential reflects a 1.4 percentage point increase in response rates within this group.

The most significant *decreases* within this ongoing group involved Food Services Industries, Parts 2 and 3 and Amusement and Recreation Services. The two surveys experienced similar changes. For the former, there were reductions of 1,079 hours (15.4%, Potential) and 948 hours (24.1%, Actual)—due to a sample size decrease of 488 units and a response rate decrease of 5.8 percentage points. For the latter, there were reductions of 1,050 hours (29.2%, Potential) and 622 hours (19.7%, Actual)—there was a sample size decrease of 456 units and a response rate increase of 11.9 percentage points. The most significant *increase* within the ongoing group involved Computer Services for which there was an increase of 593 hours (24.8%, Potential) and 825 hours (38.1%, Actual)—there was a sample size increase of 455 units and a response rate increase of 9.7 percentage points.

Transportation Division

All business

- decrease in Potential Compliance Costs of 3,332 hours, -7.4%
- decrease in Actual Compliance Costs of 3,915 hours, -9.7%

Small business

- decrease in Potential Compliance Costs of 1,226 hours, -9.4%
- decrease in Actual Compliance Costs of 1,187 hours, -11.2%

Thirty-three surveys were conducted in both 1999 and 2000. For these, cost changes in both directions netted to a decline of 3,858 hours (8.6%, Potential) and 4,261 hours (10.6%, Actual). In this group, the largest decrease (on either basis) involved Air Charter Statistics. The decrease and the corresponding percentage were the same on both a Potential Cost basis and an Actual Cost basis—2,184 hours or 29.4%. For Air Charter Statistics, there was a reduction in sample size of 25 units. There are no small enterprises in the sample. The largest increase involved the Annual Railway Transport Survey—there was an increase of 1,020 hours (85.0%, Potential) and 506 hours (42.2%, Actual). For this survey, there was an increase in sample size of 29 units and a decrease in response rates of 23.2 percentage points.

One survey was conducted in 2000 only. It covered the Taxi and Limousine Industry and increased costs by 645 hours (Potential) and 383 hours (Actual). It had last been conducted in 1998.

One survey was conducted in 1999 only—Annual Motor Carriers of Freight, Private Trucking. This survey was the source of decreased costs of 119 hours (Potential) and 38 hours (Actual).

Section 3: Top Three Surveys

(i) By level of response burden in 2000

Table #4 shows the business surveys that are ranked top three in terms of compliance cost in reference year 2000. Table #4(a) is based on Potential Compliance Cost. Table #4(b) is based on Actual Compliance Cost.

For 1999 and 2000, and on both the Potential and Actual bases, the top three business surveys are the same: Quarterly Financial Statistics, the Monthly Retail Trade Survey, and the Annual Survey of Manufactures. On either basis, the top three account for over 25% of the total burden.

(ii) By change in level of response burden between 1999 and 2000

Table #5 identifies the business surveys that are the largest contributors to year-over-year change in compliance costs. The tables are subdivided into the three survey types: (i) surveys conducted in both 1999 and 2000, (ii) surveys conducted in 2000 but not in 1999, and (iii) surveys conducted in 1999 but not in 2000. Table #5(a) is based on Potential Compliance Cost; Table #5(b) is based on Actual Compliance Cost.

In terms of the 203 surveys conducted in both years, there was a cost decrease of 22,724 hours (Potential) and 46,140 hours (Actual). On a Potential Cost basis, the survey accounting for the largest portion of that change was the Workplace and Employee Survey (WES); it accounted for 26.0% of the decline. On an Actual Cost basis, the largest contributor was Quarterly Financial Statistics, accounting for 25.4% of the decline.

Among the 13 surveys conducted in 2000 but not 1999, the largest, in terms of compliance costs, was the Survey of the Construction Industry. It accounted for 40.8% (Potential) and 37.9% (Actual) of the costs associated with surveys conducted in 2000 only.

Among the 17 surveys conducted in 1999 but not 2000, the largest, in terms of Potential Compliance Cost, was the Survey of Trusteed Pension Funds. On an Actual Cost basis, the largest was the Periodical Publishing Survey. The former accounted for 18.8% of Potential Compliance Cost associated with surveys conducted in 1999 only. The latter accounted for 18.7% of Actual Compliance Cost.

Table 4: Top Three Contributors to Response Burden, Business Surveys, 2000

4(a) Potential Compliance Costs

| Division | Survey Name | Burden Hours | % of Total Burden | Current Rank | Prev Yr Rank |
|----------|---|--------------|-------------------|--------------|--------------|
| IOFD | Quarterly Financial Statistics | 97,182 | 12.7 | 1 | 1 |
| DTD | Monthly Retail Trade Survey | 49,341 | 6.4 | 2 | 2 |
| MCED | Annual Survey of Manufactures (incl Hd Off) | 48,062 | 6.3 | 3 | 3 |
| | Top Three | 194,585 | 25.4 | | |
| | All Other | 573,272 | 74.6 | | |
| | Total for All Business Surveys | 767,857 | 100.0 | | |

4(b) Actual Compliance Costs

| Division | Survey Name | Burden Hours | % of Total Burden | Current Rank | Prev Yr Rank |
|----------|---|--------------|-------------------|--------------|--------------|
| IOFD | Quarterly Financial Statistics | 60,253 | 10.4 | 1 | 1 |
| DTD | Monthly Retail Trade Survey | 44,983 | 7.8 | 2 | 2 |
| MCED | Annual Survey of Manufactures (incl Hd Off) | 42,850 | 7.4 | 3 | 3 |
| | Top Three | 148,086 | 25.6 | | |
| | All Other | 429,641 | 74.4 | | |
| | Total for All Business Surveys | 577,727 | 100.0 | | |

Table 5: Top Three Contributors to Change in Response Burden (Relative to Previous Year), by Survey Status

5(a) Potential Compliance Costs, Business Surveys, 2000

(i) Surveys Conducted in Both 1999 and 2000

| Rank | Division | Survey Name | All Enterprises | | Small Enterprises | | Large Enterprises | |

Section 4: One-Off Surveys

Table #6 shows the burden associated with one-off surveys—occasional cost-recovery surveys and surveys conducted with very low periodicity. These costs are excluded from the rest of this report.

In reference year 2000, only Small Business and Special Surveys Division conducted one-off surveys. On a Potential Cost basis this activity involved 14,035 burden hours.

Table 6: Potential Compliance Costs, All One-Off Business Surveys*, 1991 - 2000

Methodological Notes

- This table provides summary information at the all-STC level, followed by summary-level and survey-level data for each division. Within each division, the survey-level data are sorted by survey name.
- "Frequency" at aggregate levels is a weighted average of the frequencies of the constituent surveys. The weight used is survey sample size.
- "Response time" at aggregate levels is a weighted average of the estimated response times of the constituent surveys. The weight used is the product of sample size and survey frequency.
- "Response rate" at aggregate levels is a weighted average of the response rates of the constituent surveys. The weight used is the product of survey sample size, survey frequency, and survey response time.
- Undefined percentages (those that would be created by division by zero) are shown as a dash "-". Percentages shown as "999" include all defined percentages greater than 999.
