MEAN SEA LEVEL PRESSURE NORMALS

Monthly and annual mean sea level pressure normals are shown on these tables for all Canadian weather stations with an appreciable length of record over the period 1941 to 1960. The values listed are generally based on at least ten years of observed data. However, shorter records have been used in a few instances where it is important that a provisional normal be established. At some stations the established elevation of the station was in error during the early part of the record and it has been necessary to apply corrections to the data to bring them into uniformity with surrounding stations. In each case a code number is given which indicates the way in which these normals have been calculated. The key to this code is given on page 2.

It is planned to publish these pressure normals in a booklet with other climatological parameters at a later date and this preliminary listing provides an opportunity to apply any needed editorial corrections. Users of these data are therefore urged to advise Meteorological Branch Headquarters of any errors or omissions.

The mean sea level pressure data are expressed in millibars.

March 7, 1966.

Climatology Division,
Meteorological Branch,
315 Bloor Street West,
Toronto 5, Ontario.

TYPE OF NORMAL

<u>CODE</u>	<u>DESCRIPTION</u>
1	Normals were computed directly from 17 to 20 years of observed data within the period 1941 to 1960. In most cases the normals are based on a full 20 years of record.
2	Normals were computed from 10 to 16 years of observed data within the period 1941 to 1960. No adjustment factor has been used.
3	Normals were computed from 5 to 9 years of observed data within the period 1941 to 1960. No adjustment factor has been used.
4	These averages are based on observed data within the period 1941 to 1960 but a standard adjustment has been applied to all months.
5	These averages are based on observed data within the period 1941 to 1960, but adjustments have been made, the amount varying by season.
6	These averages are based on the available observed data within the period 1941 to 1960. These data are considered "suspect", but are generally mapable.
7	These averages are based on the available observed data within the period 1941 to 1960, but where necessary individual months have been adjusted.
8	These averages are based on observed data within the period 1935 to 1960. The data were incomplete during the period 1941 to 1960 and the period was extended back to 1935 to provide as many years of record as possible. Most of these normals are based on 20 years of record.
