SECTION I

SCOPE OF ANALYSIS

This report is based on a detailed examination of documents covering imports of fresh apples from the United States included in Statistics Canada Import Commodity Code 71-03 "Apples, fresh or chilled".

The documents examined were selected by a sampling technique as follows:

All shipments were divided into two groups (strata) on the basis of their ledger value (the value, for customs purposes, of the shipments). Stratum 1 consisted of shipments with values \$5,000 and over and Stratum 2 consisted of shipments valued at less than \$5,000.

All shipments from Stratum 1 were examined. One-twentieth of all the shipments designated to Stratum 2 were selected for examination, using systematic sampling from random starts. Results in this report are based on examined invoices. Those of Stratum 2 being multiplied by twenty.

In all 2,338 documents were examined (38 per cent of the total documents for 1980). These documents accounted for 67 per cent of the total value of imports in 1980.

SECTION II

RECONCILIATION

The value reported in this analysis does not correspond to official Statistics Canada figures for various reasons.

Reconciliation of the two total figures is explained as follows:

	<u>Value</u> (<u>\$</u>)
<u>Values accounted for</u>	
Documents which referred to products which should have been classified elsewhere	108,364
Documents not available for analysis	288,294
Countries other than the United States	4,936,850
Difference in definition of value - Import Analysis Directorate uses selling price F.O.B.; Statistics Canada values are for Customs duty purposes	66,995
Total values analyzed in this report	<u>29,043,021</u>
Total values accounted for as above	34,443,524
Total values published by Statistics Canada for 1980 from the United States	33,954,000
Difference of total values = \$489,524 (= + 1.42 per cent)	
Standard deviation of total value due to sampling \$400,000 (approximately).	

NOTE: Statistics Canada's figures are subject to revision; changes will be reflected in the normal way: i.e., "pink sheets", which are located in the front section of catalogue 65-007.

SECTION III

ANALYSIS OF IMPORTS

Large value shipments of fresh apples imported from the United States and examined under Stratum 1 (\$5,000 and over) accounted for 2,157 shipments valued at \$22,586,628. The remaining shipments examined under Stratum 2 (under \$5,000, every 20th shipment) accounted for 181 shipments valued at \$322,820.

This section includes four tables of information. Table 1 shows imports by month of entry. Table 2 by province of entry, Table 3 by exporting state and Table 4 by price range.

NOTES

The following notes refer to all tables and summaries contained in this report.

- F. = Fancy
- E.F. = Extra Fancy
- N.S. = Not Shown
- = No Imports
- * = Less than 500 pounds or \$500

Combination = Assorted Count Sizes

All quantities and values for Table 1 and Table 4 are rounded.

Differences occurring in quantity (lb): Wherever possible this report indicates pounds in net weight (the weight of the apples plus the weight of the container). When the document did not indicate net weight a standard weight of 42 pounds per carton was used.

Dollar values shown are based on selling price F.O.B. plant, in Canadian dollars.

SECTION IV

SAMPLING AND ESTIMATES

Accuracy of Results

Since some of the shipments were selected using random sampling, figures in the tables do not correspond exactly to the results which would have been obtained if all shipments had been examined. The probable range of error depends on such factors as the number of shipments examined, their similarity or otherwise, etc.

The following summary shows the probable range of error for various values shown in the tables in Section III.

<u>Value in Table</u>	<u>Typical Relative Standard Deviation (%)</u>
\$29 million	1.3%
\$ 5 to \$10 million	2 to 3%
\$ 1 to \$ 5 million	3 to 6%
\$500 thousand to \$ 1 million	6%
\$300 thousand to \$500 thousand	8 to 10%
Under \$300 thousand	10 to 30%

In most cases (approximately two thirds or more), the true result will be within plus or minus one relative standard deviation of the values shown in the tables. In rare cases (less than one in twenty) will the true value be more than two relative standard deviations from the table value.

For example, imports of fancy red delicious apples in containers of 100 apples are shown in Table 1 as being some \$611,000, and in the summary such figures are shown to have a relative standard deviation of around 6%, or about \$37,000. So it is probable (two chances out of three) that the actual imports were in the range of \$574,000 to \$648,000, and very likely (95% sure) that they were within two standard deviations - that is, between \$537,000 and \$685,000.
