SECTION I

SCOPE OF ANALYSIS

This report is based on a detailed examination of documents covering imports of vinyl coated fabrics during January to December 1980, included in the following Statistics Canada Import Commodity Codes:

- 387-02 Vinyl-Coated Cotton Fabrics, Except Knitted
- 387-06 Vinyl-Coated Cotton Knitted Fabrics
- 387-07 Vinyl-Coated Nylon Fabrics
- 387-09 Vinyl-Coated Fabrics, Not Elsewhere Specified

The documents examined were selected by sample as follows. The shipments were divided into five groups (strata) on the basis of whether or not they were primarily for automotive end uses; and the values of the shipments (for customs purposes). The Strata used were as shown below. For each stratum is shown the proportion of invoices included in the sample. Sampling in each strata was systematic from random starts.

Stratum Consists of:

<u>Stratum Number(h)</u>	<u>Stratum Group</u>	<u>Ledger Value (\$)</u>	<u>Sampling Ratio</u>
1	Automotive	20,000 and over	Take 1 in 4
2	Automotive	0 to 19,999	Take 1 in 20
3	Other	15,000 and over	Take all
4	Other	5,000 to 14,999	Take 1 in 6
5	Other	0 to 4,999	Take 1 in 15

In all 947 invoices were examined (16% of all invoices). These accounted for 43 per cent of the total value of imports in this project during the period analyzed.

SECTION II

RECONCILIATION

There is a difference of \$5,550,468 between reported (analyzed) value of \$41,638,532 by Import Analysis Directorate (IAD) and Statistics Canada's published value of \$47,189,000. The difference is explained as follows:

	<u>January to December 1980 Dollar Values</u>	
	<u>Analyzed by</u>	<u>by Statistics Canada</u>
	<u>IAD</u>	<u>(\$,000)</u>
	<u>(\$,000)</u>	<u>(\$,000)</u>
Reported Analyzed Value	41,639	47,189
Documents not Available for Analysis	1,055	
Documents or parts thereof belonging to other Commodity Codes and excluded	3,922	
Remaining Difference	573	
	<u>47,189</u>	<u>47,189</u>

The remaining difference of \$573 thousand is 1.4 per cent of the reported analyzed value. The estimated standard deviation of the analyzed value reported herein is approximately \$1 million, so it is reasonable to attribute the remaining difference to sampling variations.

NOTE: Statistics Canada's figures are subject to revision; changes will be reflected in the normal way: i.e. "pink sheets" which are located in the front section of catalogue #65-007.

SECTION III

ANALYSIS OF IMPORTS

This section includes three tables of information. Table 1 shows imports by country of origin, Table 2 by end use, and Table 3 by generic fibre content. Each table is preceded by a summary which is listed in descending order of dollar value.

NOTES

The following notes refer to all tables and summaries in this analysis:

Width, weight and/or quantity figures were, in some cases, not available and are indicated by a dash.

All quantity and value figures are rounded.

Dollar values shown are based on selling price F.O.B. plant, in Canadian dollars.

SECTION IV

SAMPLING AND ESTIMATES

Accuracy of Results

Since some of the shipments were selected using random sampling, figures in the tables do not correspond exactly to the results which would have been obtained if all shipments had been examined. The probable range of error depends on such factors as the number of shipments examined, their similarity or otherwise, etc.

The following summary shows the probable range of error for various values shown in the tables in Section III.

<u>Value in Table</u>	<u>TYPICAL RELATIVE STANDARD DEVIATION (%)</u>	
	<u>Automotive</u> <u>End Use</u> (%)	<u>Other</u> <u>End Use</u> (%)
\$18.1 million	5.1	-
\$15.1 million	5.2	-
\$23.5 million	-	1.5
\$ 5 to \$10 million	9.0	4.0
\$2 to \$5 million	14.0	6.0
\$1 to \$2 million	20.0	8.0
\$500 thousand to \$1 million	28.0	11.0
\$200 thousand to \$500 thousand	45.0	18.0
\$100 thousand to \$200 thousand	63.0	25.0

In most cases (approximately two thirds or more), the true result will be within plus or minus one relative standard deviation of the values shown in the tables. In rare cases (less than one in twenty) will the true value be more than two relative standard deviations from the table value.

For example in Table 1, imports of wall coverings for the U.S. entering at Ontario points had a value of about \$1,175,000. From the summary above, the relative standard deviation is probably around 8%, or \$94,000. So it is probable (two chances out of three) that actual imports of these wall coverings from the U.S. entering at Ontario points were in the range \$1,081,000 to \$1,269,000; and it is very likely (95% sure) that these imports were within two standard deviations - that is between \$987,000 and \$1,363,000.

The sample was designed to provide more useful figures on non-automotive end use than on automotive. The summaries of the typical relative standard deviations, as shown above, indicate that the "other end uses" figures are, as planned, much more accurate.

FOREIGN EXPORTERS TO CANADA (Cont'd)

NOTES

The country or state indicated for each exporter does not necessarily mean that exports originated from only that country or state. In some instances plants located in other countries or states may be involved.

A total number of analyzed shipments of vinyl coated fabrics valued at approximately \$807,000 known definitely to be for use in the automotive industry are included in the tables in Section III. However, because of the unavailability of the invoice documents only limited data was obtained, e.g. the name of the exporting company could not be confirmed therefore this amount was not included in this list of foreign exporters.

SECTION VII

CANADIAN AND FOREIGN TARIFFS

CANADA

Vinyl coated fabrics included in this analysis were dutiable under the following most commonly applied tariff items.
