# Britain Obtains More Than Half Food Requirements in Canada

*Percentage for 1947 was 53·4, compared with 24·9 in 1938—Total imports of foodstuffs in 1947 were 167,300,000 cwts., compared with 207,700,000 cwts. in 1938 and 133,600,000 cwts. in 1946—Relative value last year was 2·31 times that of last prewar year—Cost per unit of 100 cwts. lower than in 1946.*

By W. B. Gornall, Commercial Secretary for Canada (Agricultural Specialist)

**L**ONDON, February 6, 1948.—Canada was the principal source of supply during 1947 for the foodstuffs imported by Great Britain, 53·4 per cent of the total having originated in the Dominion, compared with 57·3 per cent in 1946 and 24·9 per cent in 1938, the last full prewar year. Imports of the major food items, in which Canada is most interested, aggregated 167,332,633 cwts., compared with 133,614,115 cwts. in 1946, which represents an increase of 25·2 per cent. Substantial gains were shown over 1946 for wheat, wheat flour, beef, poultry, shell eggs, fresh fruits other than apples, and jam. Decreases were recorded for beans, bacon, pork, pig products, canned milk, fresh apples and canned tomatoes.

Returns issued by the British Board of Trade indicate that imports for 1946 declined 35·7 per cent from those for 1938, whereas the decline for 1947 was only 19·5 per cent. This would indicate that the flow of

United Kingdom—Canadian Pacific cargo liner *Beaverdell* discharging Canadian produce in the Royal Victoria Dock, London.

foodstuffs into this country was increasing, and had reached approximately four-fifths the prewar volume. The concentration of supply has been largely in Canada, whereas it was more widely dispersed before the war.

Canada increased her overall shipments of food products from 76,450,000 cwts. in 1946 to 89,380,000 cwts. in 1947, an increase of approximately 17 per cent. Compared with 1938, when 50,040,000 cwts. were shipped, the increases for 1947 and 1946 were 78.6 per cent and 52.7 per cent, respectively. The major increases, compared with prewar, have been in wheat, wheat flour, meat, bacon, poultry, shell eggs, SO<sub>2</sub> fruits and canned salmon. Losses have been largely confined to cereals and cereal products, other than wheat, apples and certain canned products.

While the total value of imported foodstuffs in 1947 was substantially higher than that for 1938, the actual volume has declined. The relative volumes and values for 1947, 1946 and 1938 are as follows:

#### British Imports of Foodstuffs, by Volume and Value

1947		1946		1938	
Million cwts.	Million £	Million cwts.	Million £	Million cwts.	Million £
167.3	425.8	133.6	350.3	207.7	228.1
-19.5%	+86.6	-35.7%	+53.5%	....	....

On the basis of 100 cwts., the relative value of imports of foodstuffs for 1947 was £254.5, or 2.31 times that for 1938, whereas the value for 1946 was £262.2, or 2.38 times that for 1938 (£109.8). The cost of a unit of 100 cwts. in 1947 was slightly lower than in 1946.

# Canadian Statistical Review Is Issued as Guide to Business

*Monthly publication of the Dominion Bureau of Statistics appears in attractive format, and presents tables in more practical form—Special article on some phase of operations will feature each issue, commencing with discussion of cost-of-living index next month.*

STATISTICS, which provide a foundation for industrial progress and the ordered development of a country, are being presented in a more attractive and more practical form through publication of the *Canadian Statistical Review*, which is being introduced this week to the commercial community. Material contained in this publication is not entirely new, for many of the tables have appeared regularly in the *Monthly Review of Business Statistics* for more than twenty years. There is an introductory group, however, pertaining to Canada, Great Britain and the United States, which provides a means of comparing the economic development of this country with that of the two countries exerting the greatest outside influence on conditions in this Dominion.

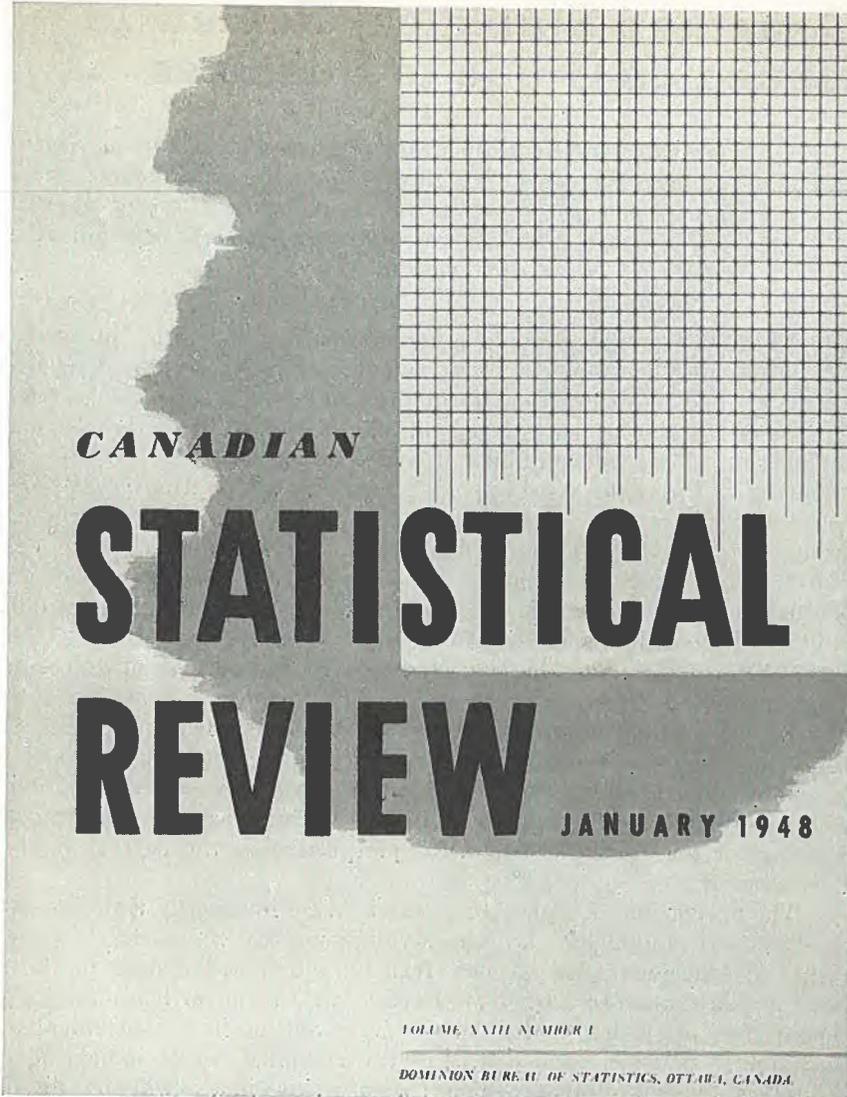

Substantial changes have been made in the format of this review, apart from the arresting cover design. The page size now conforms to that of most publications issued by the Dominion Bureau of Statistics, while the larger area enables the statistics to be better spaced and presented in more readable type. In addition, longer tables can be provided, with monthly figures over a period of two years and monthly averages for a period of ten. A better historical perspective to the current figures is thus secured.

The proportion of explanatory text is being increased, while the review of statistical "highlights" will be accompanied by references to developments in other countries. A new feature, which will appear in the next issue of the *Canadian Statistical Review*, will be an article on some particular field of statistics. Its purpose is to outline in non-technical terms the manner in which such statistics are compiled, while indicating their limitations and usefulness. The cost-of-living index will be discussed next month.

## **Dominion Statistician Outlines Complexities**

As explained in his introduction to the first issue, Herbert Marshall, Dominion Statistician, says: "The highly complex and pressing economic problems created by total war accelerated development in the quantity and quality of statistical information. New data and improved statistical devices were produced for measuring the economic resources of the country and for gauging what policies would best promote the maximum war effort from these resources. As the economic and social problems of the war passed into those of the postwar period, there was some change in their nature. But their intensity and complexity remained.

"The war also stimulated a growing public interest in statistics. Developments, such as the threat of inflation, gave greatly increased

# **STATISTICAL REVIEW**

**JANUARY 1948**

VOLUME XVIII NUMBER 1

DOMINION BUREAU OF STATISTICS, OTTAWA, CANADA

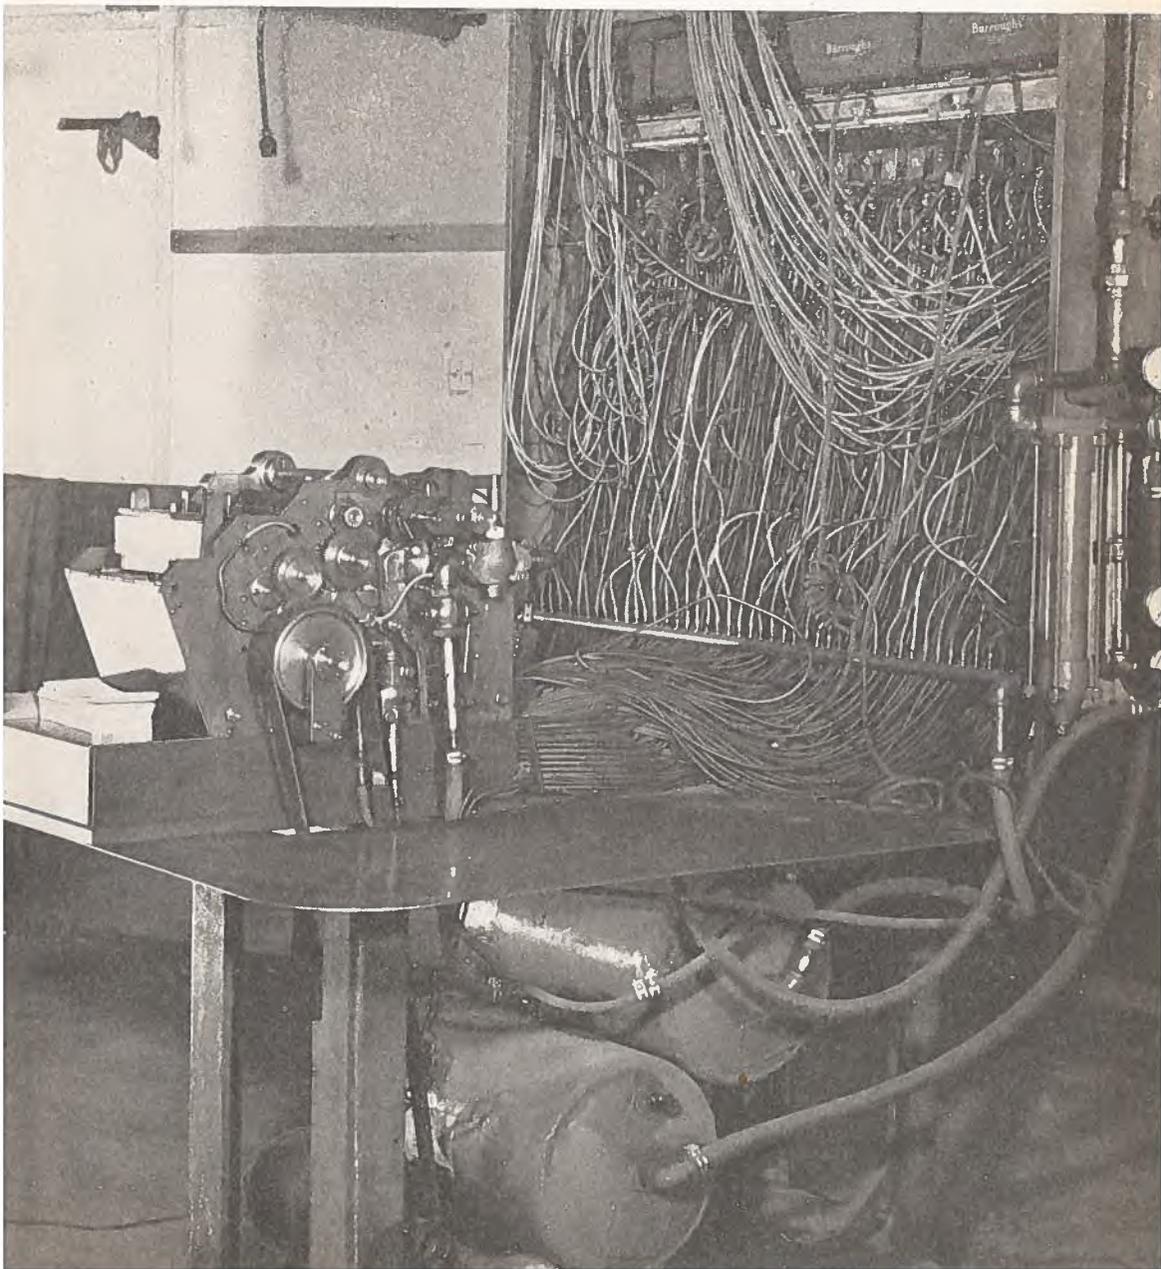

**Front cover of the *Canadian Statistical Review*, which makes its initial appearance this week from the Dominion Bureau of Statistics. It succeeds the *Monthly Review of Business Statistics*.**

importance to the cost-of-living index and other measurements of prices that lent themselves to the determination of wage increases, or to provide an escalator clause in long-term contracts. More people came to realize that they had a strong personal interest in the economic health of the country, the problems facing it, and in the policies adopted to meet those problems. They also recognized that statistics are the only means by which the national economic health can be accurately gauged, the magnitude of the problems measured and the wisdom of the policies judged. The resulting demands for further enlightenment concerning statistical facts must be encouraged, and anything which can be done to present statistical data in a clear, interesting and attractive manner will be an important step in that direction.

"As the principal current statistical publication of the Dominion Bureau of Statistics, the *Canadian Statistical Review* is designed to cover as widely as possible the general needs of statistical users. It cannot, in many cases, cater to the more detailed requirements of those closely interested in a particular industry or economic activity. Such information can be obtained, however, from the other more specialized publications of the Bureau, of which 434 are issued regularly."

**Tabulator used by the Dominion Bureau of Statistics. Operated by compressed air, this tabulates 560 individual facts in a single operation. Totals appear on the front panel in reverse, are photographed on sensitized paper, and reappear in correct order on the "result" panel. Hundreds of tubes in rear carry the compressed air to operate the intricate machinery.**

# American Demand for Goods and Services Greater Than Supply

*Industrial activity close to postwar peak—Foreign trade at record level—Employment at or near maximum, passing sixty-million mark—Value of retail sales established record figure—Commodity prices, particularly of farm products and foods, continued advance.*

By W. D. Wallace, Assistant Commercial Secretary, Canadian Embassy

(Editor's Note—This is the first in a series of five articles on economic conditions in the United States during the past year, prepared for publication in *Foreign Trade*.)

WASHINGTON, D.C., February 9, 1948—Business activity in the United States during the past year was the greatest in the peacetime history of this country. Production facilities were called on to satisfy the great demand for consumer goods, and also for the modernization and expansion of industries, utilities and public services. The demand was greater than the country could satisfy, as indicated by the rise in prices. The continuous increase in prices has been considered the principal phenomenon of the year. However, the predicted "1947 recession" almost began in the second quarter of the year, when construction activity and inventory accumulation fell to relatively low levels, and the production of some non-durable goods began to slacken in the face of uncertain demands. However, the large volume of exports sustained the general level of the economy, and business confidence was restored by the time export values started to decline.

The Federal Reserve Board index of industrial activity for December, 1947, was 191 as compared with the postwar peak of 192 for the month of November and with 182 in December, 1946. Gross national production was at a rate close to \$231,800,000,000 as against an average of \$203,700,000,000 in 1946 and \$90,400,000,000 in 1939. The national income passed a rate of \$203,000,000,000 as compared with the 1946 average of \$178,200,000,000 and with \$72,500,000,000 in 1939. Other outstanding developments of the past year were the high level of employment and wages, record farm income, and increased steel and automobile production.

## Foreign Trade at Record Level

Despite the increasing dollar shortage and establishment of quota restriction by many foreign countries, the foreign trade of the United States was at a record level in 1947 and was characterized by a rapid expansion of exports in the first half of the year, followed by a decline. Imports showed little change during the year, with a result that exports exceeded imports by almost \$9,000,000,000. The suspension in August of sterling conversion by Great Britain and the near exhaustion of her \$3,750,000,000 United States credit had repercussions on United States foreign trade. This shortage of United States dollars was followed by a decision to curb further imports, which set off a chain of reactions in many other countries when they found they did not have enough dollars to pay for the large volume of imports from the United States.

It is estimated that total exports in 1947 were at a record high of about \$14,474,900,000 as compared with \$9,739,500,000 in 1946, a gain of 49 per cent. On the other hand, imports are estimated at \$5,738,600,000, or 17

per cent above the 1946 total of \$4,908,900,000. Exports reached their peak in May, when shipments were valued at \$1,422,000,000, of which \$1,355,700,000 represented commercial transactions. Although they declined in the ensuing months, exports remained above the rate of a billion dollars per month.

The two outstanding factors that are expected to influence the foreign trade of the United States in 1948 are the European Recovery Plan and the tariff reductions arrived at under the Geneva Trade Agreements.

#### **Employment Close to Maximum Figure**

The outstanding feature of the employment situation in 1947 was the fact that it remained at or near maximum levels throughout the year, and for the first time civilian employment passed the sixty-million mark. In June and July, the number of employed exceeded 60,000,000, but showed a slight decline to 57,900,000 in December. However, employment averaged 58,000,000 for the year as compared with an average of 55,300,000 in 1946. The increase was most pronounced in the manufacturing industries, construction and mining showing the largest gains. A slight increase was also recorded for trade, finance and services, but a decrease in government employment. The number of unemployed in December, 1947, was estimated at 1,643,000, the lowest in two years, as against 2,120,000 in December, 1946. For the year as a whole, the number of unemployed averaged 2,100,000 as against an average of 2,300,000 in 1946.

As a result of full employment, high wages and large industrial and agricultural incomes, consumers' income reached record levels during 1947. It is estimated that total personal income amounted to \$197,200,000,000 as compared with \$177,200,000,000 in 1946. All the major categories of income payments recorded gains over the previous year. The increase in income was offset by the rapid rise in prices, with the result that real purchasing power was less than in 1946. However, consumption was maintained at a high level by the liquidation of savings, a reduction in saving out of current incomes and the extensive use of consumer credit.

#### **Record Established for Retail Sales**

The Department of Commerce estimates that consumer spending of all types in the United States in 1947 amounted to \$165 billion as compared with \$144 billion in the previous year. The high level of expenditures was accounted for by an increase in prices, together with an increase in the physical volume of goods moving through retail channels.

Retail sales established a record of \$118,000,000,000, an increase of \$18,000,000,000 over the 1946 figure. Sales of durable goods amounted to \$28,700,000,000, an increase of \$7,900,000,000 over the 1946 total, while those of non-durable goods rose by \$9,400,000,000 to \$88,000,000,000. In the durable goods group, sales of automobiles, parts and accessories were outstanding, being estimated at \$11,900,000,000, or about 75 per cent above the total for the previous year.

Sales of home furnishings amounted to about \$6,800,000,000, while those of building material and hardware reached \$8,800,000,000. Jewelry store sales were the only group to show a decline, being estimated at \$1,300,000,000, or 3 per cent below the value recorded in 1946. The non-durable goods group in general showed smaller increases than durable goods. Sales by filling stations, at \$5,200,000,000, were 28 per cent above those for 1946, while food store sales amounted to \$31.3 billion, a gain of \$5.8 billion, or 23 per cent, over the 1946 total. Most of this increase was attributed to rising prices. Sales by apparel stores were estimated at

\$9,200,000,000 in 1947, while those of general merchandise by department stores amounted to \$15,700,000,000. Sales at eating and drinking places were estimated at \$13,500,000,000, or about the same as in 1946.

### Commodity Prices Continued to Rise

Reflecting the effects of generally rising demands and costs, commodity prices in wholesale and retail markets continued to rise in 1947, but not as rapidly as in the latter half of 1946, when price controls were removed. The general level of wholesale commodity prices was up 15 per cent as compared with those prevailing at the beginning of the year, while retail prices increased about 8 per cent. Wholesale prices were about 50 per cent higher than in June, 1946, and 110 per cent over the 1939 level. Consumer prices were 30 per cent higher than in June, 1946, and 65 per cent above prewar prices.

At the close of 1947, as at the beginning, prices of farm products and foods were at exceptionally high levels in relation to those of other commodities. Prices of all commodities rose in the first quarter of 1947, were stable in the second quarter, and advanced steadily in the second half of the year. The advance was attributed to a number of developments which indicated that supplies would not be as abundant as had been anticipated and that demand would be greater because of larger domestic incomes and additional United States Government financing of foreign purchases.

### Only Paint Material Prices Lower

The following table, compiled by the *New York Journal of Commerce*, shows the commodity price level (1927-29 equals 100) at the end of 1947 as compared with the level at the close of 1946:

	Index of Commodity Prices	
	Dec. 27, 1947	Dec. 28, 1946
General index .....	182.1	155.5
Grains .....	247.0	159.3
Foods .....	207.5	183.4
Textiles .....	169.3	146.6
Fuels .....	166.2	130.4
Iron and steel .....	144.0	125.8
Non-ferrous metals .....	146.3	131.7
Building materials .....	221.9	197.0
Paint materials .....	230.4	241.2
Chemicals .....	110.8	105.3
Pulp and paper .....	174.2	154.1

Prices of farm products and foods showed substantial increases above those of a year ago, but some prices for grains and cereal products were exceptionally high, reflecting reduced harvests of feed grains and a record rate of government purchases of wheat and flour for export. Fuels, iron and steel and lumber were substantially higher than a year ago, the largest increases being recorded for bituminous coal and petroleum products. The only important commodity to show a decrease in price from the 1946 level was paint materials.

The importer should advise what markings are required on goods, packages and packing cases. The name of the country of origin should be indicated clearly on merchandise, and often on the packing, in manner specified by the regulations of the country of destination. (See our *ABC of Canadian Export Trade*, page 19.)

# Gold Coast Export Trade Shows Increase Over Prewar Value

*Cocoa has been principal export crop for many years—  
Timber exports in 1945 nearly four times 1939 figure—  
Increases recorded for shipments of rubber, manganese,  
bauxite and coffee—United Kingdom is principal market  
and source of supply—Trade with Canada expanded.*

By R. P. Bower, Commercial Secretary for Canada

(Editor's Note—This is the fourth in a series of six articles on economic conditions in British West Africa prepared for *Foreign Trade*. The first three appeared in the January 24th, February 7th and February 14th issues.)

LONDON, December 15, 1947.—Cocoa has been the principal export crop of the Gold Coast for many years, although the ravages of disease have recently reduced the volume considerably. Gold production is also important and is beginning to revive again following relaxation of wartime restrictions. Timber exports in 1945 were nearly four times larger than in 1939 and the trend is continuing. Rubber exports, which were stimulated by the war, were three times higher in 1945 than in 1938. Exports of manganese, bauxite and coffee also showed increases.

The Gold Coast, occupying an area of 91,000 square miles, is the second largest of the British West African colonies and almost twice the size of Canada's maritime provinces. Situated between 5 and 11 degrees north of the equator, the colony has a rainfall which varies from an average of 30 inches at Accra to 80 inches in other parts. The heat and humidity demand extra care in packing.

The standard of living and education of the 4,000,000 inhabitants is generally higher than in other West African colonies. There is a considerable railway system and a comprehensive network of good roads. Port facilities, however, are not good.

Accra is the main town and centre of government administration. Takoradi, the chief port, is small. The considerable volume of goods that moves through Accra must be transferred to lighters and handled through the surf.

## General Plan for Developing Colony

The "General Plan for Development in the Gold Coast" was published in 1944. At that time (modifications have been suggested since) capital expenditure amounting to \$20,756,000 was proposed, to be financed from surplus balances and from grants under the Colonial Development and Welfare Act. The provisional capital outlay was as follows: hospitals, \$6,296,000; anti-sleeping sickness, \$300,000; water supply, \$1,480,000; electric light and power, \$880,000; re-housing (first 4 years), \$3,200,000; road development, \$2,000,000; telegraph and telephone schemes, \$1,000,000; purchase of army property, \$1,000,000; harbour improvement (Takoradi), \$2,000,000; railway improvement, \$1,600,000; and agricultural credit and marketing (including cocoa), \$1,000,000. The cocoa marketing scheme will be financed from the substantial surpluses that have been accumulated from cocoa sales during the war.

The import figures for the Gold Coast do not picture actual demand, since in many cases the supplies available were restricted by world-wide

shortages. An examination of the Gold Coast Plan suggests certain fields where future imports will be important. The total value of imports in 1945 was \$40,800,000 compared with \$30,600,000 in 1938.

#### United Kingdom is Principal Source of Supply

The principal sources of supply in order of importance in 1945 were: United Kingdom, \$23,440,000; United States, \$8,500,000; Dutch West Indies, \$3,500,000; Nigeria, \$1,680,000; India, \$1,520,000; and Canada, \$900,000. The sequence was similar in 1938 with the exception that Germany and Japan appeared as the third and fourth most important suppliers respectively. Canada's trade at \$900,000 in 1945 compares with \$260,000 in 1938.

*Apparel.*—Twenty-four thousand five hundred pairs of leather boots and shoes were imported in 1945, valued at \$90,000, the United Kingdom supplying roughly half. The United States supplied 13,000 pairs valued at \$56,000 and Canada 2,000 pairs valued at \$8,720. Rubber boots and shoes, including those with canvas uppers, were in very heavy demand, but only a fraction of requirements could be located, 23,696 pairs being imported valued at \$25,000. An idea of potential demand is available from the 1938 returns, which showed 151,400 pairs. In that year Japan supplied 95 per cent of the total. In 1945, Brazil was the principal supplier with 21,000 pairs, followed by Canada with 2,032 pairs.

Other important items were hats and caps (\$125,000) and singlets (\$120,000). The United Kingdom was the predominant supplier in both instances. Volume was limited by the inability of supplying countries to offer all that was wanted.

*Bags and Sacks (Jute).*—The export of cocoa demands substantial quantities of bags, the figure for 1945 amounting to almost 4,000,000, valued at \$930,000. India was the only important source.

*Textiles.*—An idea of cotton textile prospects is available from the statistics of piece-good imports in 1945. These reveal the following types (quantities are in millions of square yards): grey, unbleached, 2·7; white, bleached, 5·1; printed, 19·9; dyed in the piece, 5·8; coloured, 2·9; a total of 36 million square yards, valued at \$9,440,000.

#### Principal Sources of Textiles Imports into the Gold Coast

	Bleached	Dyed	Coloured	Grey	Printed
	(Millions of square yards)				
United Kingdom .....	2.1	3.5	2.5	.2	18.6
India .....	.2	.2	.3	1.1	.1
United States .....	2.7	1.1	....	1.3	1.2
Other .....	.1	1.0	.1	.1	....
Total .....	5.1	5.8	2.9	2.7	19.9

In addition, approximately 2,000,000 square yards of artificial silk piece-goods valued at \$880,000 were imported, almost entirely from the United Kingdom. In 1938, Japan was the largest supplier, followed by Czechoslovakia, Italy and the United Kingdom.

*Agricultural Implements and Tools.*—Imports in 1945 were valued at \$316,400, of which \$297,000 came from the United Kingdom. The agricultural development planned for the area suggests a sustained market for some time.

*Mining and Gold Dredging Machinery.*—The total value of such machinery imported in 1945 was \$1,200,000 compared with \$3,468,000 in 1938. The largest supplier in both years was the United Kingdom, though in 1945 Canada, South Africa and the United States were making important contributions.

*Railway Rolling Stock.*—The United Kingdom and the United States are the only sources shown as suppliers in 1945, although Germany, Belgium and Holland all supplied in 1938. In that year 19 steam locomotives, 19 carriages and 832 trucks were imported. Current procurement is restricted by world shortage of this type of equipment.

*Motor Cars, including Parts.*—Commercial vehicle imports were as follows: United Kingdom, 78, valued at \$47,060; Canada, 30, valued at \$63,548; and United States, 73, valued at \$153,440. Parts were valued at \$334,800, 77 per cent of United States origin and the balance from the United Kingdom. Canada was not a supplier of vehicles under this heading in 1938, but furnished a small supply of parts.

There was also a trade in chassis with engines and fitted tires. In 1945 the United States and Canada shared the trade, with 147 vehicles valued at \$181,052 and 110 valued at \$160,800 respectively. Private car imports originated in the United Kingdom and the United States, with 37 and 13 vehicles respectively.

*Tires and Tubes.*—Imports of motor vehicle tires and tubes were valued at \$741,408. The United Kingdom and South Africa were the principal suppliers.

*Medicines and Drugs.*—Of total imports valued at \$820,000, the United Kingdom supplied \$700,000. The United States was the second supplier with smaller quantities coming from Canada.

*Perfumery (other than toilet soap).*—Imports in 1945 were valued at \$550,000, of which 67 per cent originated in the United Kingdom. The United States, Canada and South Africa supplied the balance.

*Beer, Ale, Stout, Porter.*—Local production of beer exceeds 800,000 gallons and the bulk of imports is for re-export. The 1945 figures show that 93,600 gallons were imported, of which 65,000 gallons valued at \$70,000 came from Canada. The United States (28,600 gallons) was the only other supplier of consequence.

*Confectionery.*—The market for imported confectionery is in the neighbourhood of \$80,000 per annum. At present Canada is the principal supplier, with roughly one-half of the total.

*Canned Fish.*—The statistics do not reveal the type of fish covered, but, since 87 per cent of the \$216,000 imported in 1945 originated in Canada, it is apparent that Canadian types are in demand. In 1938, imports were valued at \$574,000, when Japan was the principal supplier with approximately half, followed by the United States and Portugal. In 1945, Canada with \$164,000 and the United States (\$50,000) were the only important sources.

*Wheat Flour.*—Imports in 1945 amounted to 95,493 cwt. valued at \$594,872. The United States dominates this market with 97 per cent of total imports. The type of flour offered is the same as is produced in Canada, the predominant position occupied by the United States being due to early exploitation of the field and the almost fanatical devotion to old and favourite brands by the buying public.

*Milk, Concentrated.*—Unsweetened condensed milk is the most popular concentrated variety. In prewar years, the Netherlands was usually the principal supplier followed by the United Kingdom and Denmark. Since the war, the United States has taken the lead, followed by Canada. Imports in 1945 were valued at \$191,200, of which \$176,000 originated in the United States and \$15,300 in Canada. Sweetened condensed and powdered milk are also taken, but the demand is small.

*Spirits.*—Imports of gin in 1945 amounted to 72,000 gallons, valued at \$76,000. South Africa was the only important supplier, though there

were small receipts from Canada and the United Kingdom. Whisky imports amounted to 38,273 gallons valued at \$222,800, of which 94 per cent originated in the United Kingdom and the bulk of the remainder in Canada.

*Sawn Lumber, Wholly or Partly Dressed.*—Statistics for 1945 of lumber imports are valueless as a guide to the market, since importers could not secure offers from abroad. In 1938, a more typical year, imports amounted to 5,642,000 superficial feet, valued at \$240,000. The United States was the dominant supplier with 5,185,800 superficial feet valued at \$208,000. Canada was the second supplier with shipments valued at \$10,000.

### Exports to Canada Greatly Increased

Gold Coast exports in 1945 were valued at \$60,700,000 compared with \$44,320,000 in 1938. Leading customers in 1945 (with totals in parentheses) were: United Kingdom (\$31,600,000); United States (\$19,440,000); South Africa (\$2,100,000); French West Africa (\$1,880,000); and Canada (\$1,572,000). In 1938 shipments to Canada were valued at only \$276,000.

### Principal Exports of the Gold Coast

	Quantities		Value	
	1938	1945	1938	1945
<b>FOOD AND DRINK</b>				
Cocoa (tons) .....	263,229	232,229	\$18,146,000	\$28,572,000
Coffee (pounds) .....	48,230	2,138,804	3,040	180,000

### United States Quarterly Quota on Fish Nearly Filled

Washington, February 16, 1948.—(FTS)—The Bureau of Customs announced today that the import quota of 6,232,547 pounds of fresh or frozen filleted cod, haddock, hake, pollock, cusk and rosefish for the first quarter of 1948 is almost filled. Instructions have therefore been sent to the collectors of customs that imports of this commodity will be subject to the full rate of duty of 2.5 cents per pound until April 1, when the second quarter-year quota will open.

The Geneva trade agreement, provisionally effective January 1, 1948, bound at 1½ cents per pound the former tariff rate on a quota of 15 per cent of the average United States consumption of filleted ground fish for the preceding three years, and at 2.5 cents per pound the duty on imports in excess of the quota. This agreement provides that of the total quantity of filleted fish entitled to entry at the reduced duty in any calendar year, not more than one-fourth may be entered during the first three months, not more than one-half during the first six months, and not more than three-fourths during the first nine months.

The total tariff rate quota of such fish for the calendar year 1948 is 24,930,188 pounds. For 1947 the quota was 23,906,423 pounds.

# Trade Procedure for British and American Zones of Germany

*Summary of import and export procedure, as set forth in a series of notices issued by the military control authorities, provided for the information of Canadian firms.*

By Trade Commissioner Service, Foreign Trade Service

**I**MPORT and export procedure for the British and American zones of Germany has been set forth in a series of notices issued by the military control authorities. These are summarized for the benefit of firms presently trading with the combined areas or contemplating the transaction of business in the near future. Canadian firms are strongly advised to conduct their primary negotiations through the Canadian Economic Representative, whose address in Frankfurt is indicated under the Foreign Trade Service Abroad, published in *Foreign Trade*.

The Joint Export/Import Agency is the sole purchaser of a number of scarce and important commodities, whose address is Hoechst, Frankfurt, 498 H.Q., C.C.G. (B.E.), B.A.O.R. 21. The telegraphic address is "Jaxim, Frankfurt".

German firms in the combined zones are permitted to import through private channels raw materials and semi-manufactured goods required for the production of commodities for export and operating supplies and maintenance materials required in manufacturing for export. German importers, exporters and manufacturers who require such imported goods must submit an import application form to the Land Economic Ministry (Landeswirtschaftministerium—LWM) for the land in which the applicant has his registered place of business. No copy of the actual or proposed contract or import order need be attached at this stage.

## **Authority to Import Issued on Approval of Import Application**

If, after screening, the application is approved, the LWM will issue to the applicant an authority to import which the applicant transmits to a merchant importer for the procurement of the commodity or commodities listed. The merchant importer uses the authority to import as a basis for filing an import application with his own LWM, in order to obtain an import licence. Where the services of a merchant importer are not required, the secondary procedure is not applicable.

The merchant importer may combine more than one authority-to-import form covering the same commodity and may obtain one import licence to cover the total quantity. The LWM to which the merchant importer has submitted his application transmits it to the local branch office of the Joint Export/Import Agency (U.S./U.K.) for consideration and issue of an import licence. If the branch office approves the application, it will endorse it and return one copy to the LWM together with an import licence.

Copies of the import licence will be distributed by the LWM to the importer and authorities concerned. When requested, an additional copy will be made available to the importer when a copy is desired by the seller as evidence that the import is licensed by the Military Governments for Germany (US/UK).

Import licences are issued under the basic condition that title to all commodities shall vest in the Joint Export/Import Agency (US/UK) on

delivery. On arrival of the commodities at a German port or frontier or point within Germany and upon payment of the reichmark accounting price by the importer to an approved bank, title automatically passes to the importer and the shipping documents are endorsed to the importer accordingly.

The import order or contract must contain the following clause in every case: "This order (or contract) is subject to issuance of an import licence by the Joint Export/Import Agency (US/UK). The commodities covered by this order (or contract) are ordered on behalf of the Joint Export/Import Agency (US/UK). Title thereto will upon delivery vest in the Joint Export/Import Agency (US/UK)."

Import licences are normally valid for not more than nine months. The issue of an import licence carries with it the obligation of the Joint Export/Import Agency (US/UK) to provide for payment to the seller in accordance with the terms of the contract.

As soon as the branch office of the J.E.I.A. is informed that the whole or part of the goods covered by the import licence is available for shipment, a letter of credit will be established for the full amount of the contract, its terms extending for the full delivery period permitted under the contract. If required, the letter of credit may be opened immediately on acceptance of the order by the seller, or on execution of the contract, by both parties.

Except as otherwise provided in special cases, letters of credit will be made available against presentation by the seller of (a) a commercial invoice referring to the importer's import licence number and "program key" made known to the seller by the German buyer, preferably in the order or contract; (b) a bill of lading of the type called for by the terms of the order or contract; (c) a copy of the seller's export licence where such a licence is required under the seller's government's regulations; (d) an insurance certificate, if required.

#### **Reichmark Price of Imported Goods Paid by German Purchaser**

The German purchaser pays the reichmark price of the goods imported to his German bank, whereupon the documents, with the appropriate endorsement, are handed over to the German importer.

The German importer's instructions to the seller should require the latter to consign each shipment to the Joint Export/Import Agency (US/UK) (naming the port of discharge, if known) for the German consignee. All documents must state the import licence number or, in the case of consignments of goods purchased direct by the Joint Export/Import Agency (US/UK), the contract number.

Goods imported into the bizonal area under contracts between German firms and foreign buyers for the processing of raw materials owned and supplied by the latter also require import licences. Such licences are endorsed "No Foreign Exchange Payment".

Canadian exporters should be satisfied before committing themselves that the German purchaser will be able to obtain the necessary export licence for goods to be sent from this country and, if they are purchasing supplies in third countries for sale to the combined zones, that they have fulfilled the normal exchange control regulations.

#### **German Agents Can Perform Certain Commercial Services**

Arrangements have now been made to enable German agents to perform certain commercial services in Germany on behalf of Canadian principals. These services include the signing of import and export contracts on their behalf, locating markets for their products or sources of

supply of goods which they wish to buy in Germany, representing them in negotiations with German buyers or sellers and arranging on their behalf for insurance, warehousing and other necessary commercial services.

An agency agreement must be negotiated by the prospective agent with his principal in accordance with the customs of the trade. Such contracts are, in all cases, subject to approval by the J.E.I.A. and may be made valid for a period not in excess of one year. Payment for services performed may be made on either a commission or a fixed fee basis. Upon completion of services and accrual of commission payable by the principal in accordance with the terms of the contract, the German agent will submit a foreign currency invoice to the principal. Another copy of the invoice will be presented by the agent's German bank to the principal's bank for payment to the J.E.I.A. The agent receives payment from the J.E.I.A. in reichmarks.

#### **Direct Purchases from Suppliers May be Negotiated**

The Canadian importer or merchant wishing to purchase goods in Germany may negotiate his purchases direct with German suppliers. A German supplier wishing to undertake an export order will prepare a contract of sale with the purchaser abroad in accordance with the normal customs of their trade.

Contracts may be executed in English, German or French, but if in German or French, an English translation must be appended. Delivery may be made and title passed at the German frontier, a German port or a place within Germany. Full provision must be made in the contract for payment by the foreign purchaser to an account of the Military Governments for Germany (US/UK) on or before the date of delivery.

Every contract must contain the provision that the contract is subject to the issue of an export licence by the Joint/Export Import Agency (US/UK).

#### **World Market Price is Main Basis for Pricing German Exports**

The fundamental basis for pricing German exports is the world market price. It is the purpose of the German export program to obtain maximum proceeds for exports within the framework of a sound long-term commercial policy. It is the duty of the German supplier to obtain world market prices for exports. The branch office of the Joint Export/Import Agency (US/UK) scrutinizes contracts to ensure that this has been done.

German exporters receive in reichmarks the legal internal selling price of goods exported plus such legitimate extra costs as are necessarily incurred in producing for export, e.g., special packing and internal transportation costs.

The normal basis of sale is f.o.b. German port, f.o.r./f.o.b. German frontier or f.o.b. German airport. Sales are invoiced in the foreign currency in which the buyer is expected to pay. Countries in the sterling area pay in sterling and, in the case of Canada, payment is made in United States dollars.

The German supplier normally arranges with the purchaser for the establishment of a letter of credit with the purchaser's bank, which notifies the German bank specified by the supplier of the establishment of the letter of credit. The German bank notifies the branch office of the J.E.I.A. that the letter of credit has been established in accordance with the terms of the contract.

When the branch office of the J.E.I.A. receives notification that the credit has been established, an export licence is issued. One original and

one copy of the licence is sent by the supplier to the German customs and another is sent with the shipping documents relating to the first shipment under the licence by the supplier's German bank to the buyer's bank abroad.

In cases where contracts provide for a series of shipments to be covered by a series of payments, more than one export licence is required. Export licences are valid for six months from the date of issue or for the period specified in the contract within which delivery is to be made. If this is in excess of six months, it may be revoked at any time by the J.E.I.A.

Licences may be renewed for a further period of six months by the branch office of the agency, but applications for further renewals must be referred to the head office.

Canadian purchasers of German goods, before finally entering into commitments to buy, should, of course, satisfy themselves that they have complied with import licence and exchange control regulations at this end.

Where the names of potential suppliers in the combined zones are not known, enquiries may be addressed to the: "Verwaltungsamt fuer Wirtschaft (V.A.W.), Directors' Building, I.G. Farben in Dissolution, Hoechst, Frankfurt-am-Main," or the Canadian Economic Representative.

---

## World Trade Week in Canada Sponsored by Five Leading National Organizations

*Observance planned for May 30 to June 5—Arrangements made for establishment of provincial committees to promote ever-increasing consciousness of foreign trade and its importance to the national economy.*

**"M**ORE Trade, More Jobs" is the slogan selected for World Trade Week in Canada, which will be observed from May 30 to June 5, 1948. It is sponsored by the Canadian Chamber of Commerce, the Canadian Exporters' Association, the Canadian Section, International Chamber of Commerce, the Canadian Importers and Traders Association and the Canadian Manufacturers' Association, whose members are vitally concerned in the stimulation of interest in the development of foreign trade. The period coincides with the Canadian International Trade Fair, which is being held in Toronto from May 31 to June 12 under the sponsorship of the Canadian Government.

It is proposed that provincial committees be formed in all nine provinces to promote the observance of World Trade Week in Canada, comprising representatives of the five sponsoring bodies. Each provincial committee will be responsible for the creation of municipal committees, which will be furnished with posters and other literature of a promotional character.

In the words of D. P. Hatch, chairman of the national committee, the importance of world trade to Canada cannot be over-emphasized. In a world that is growing more neighbourly, it is important that there be sufficient exports to satisfy the needs of our neighbours and imports to satisfy our own needs. This exchange of goods encourages mutual friendly relations and an appreciation of the problems confronting our neighbours. The purpose of a World Trade Week in Canada is to direct public attention to the potential contribution of world trade to employment and general well-being at home, and to learn from one another what must be done to develop and strengthen participation in that trade.

Co-operation will be sought from the daily newspapers, weekly newspapers, trade papers and other publications, broadcasting companies, boards of education and service clubs. Retail merchants will be encouraged to arrange window displays that will emphasize the dependence of every individual on two-way trade. The assistance of other associations will also be enlisted in an effort to create an ever-increasing consciousness of trade and its contribution to the maintenance of a relatively high living standard.

## Exports From Angola at Record Level, But May Suffer From Bag Shortage

*Increased domestic production and high prices contribute principally to favourable condition—Portugal purchases approximately 50 per cent of total shipments—Output of fish and fish products substantially higher.*

By Trade Commissioner Service, Foreign Trade Service

(Editor's Note—This is the second of three reports on economic conditions in Angola, prepared for publication in *Foreign Trade*. The first appeared in the January 31st issue.)

(One angolar equals one Portuguese escudo; 1,000 angolars equal one conto, which is equivalent to \$40.40 Canadian)

**E**XPANDED domestic production and high prices in foreign markets were the principal factors contributing to the establishment of a new record figure for the export trade of Angola in 1946. Exports totalled 398,631 tons, valued at 962,251 contos, as against 314,689 tons, valued at 637,563 contos in the preceding year, indicating increases of 83,942 tons and 324,688 contos. The continuation of these prosperous conditions depends on the availability of adequate supplies of jute bagging from India. Owing to export restrictions in that country, Angola's quota for the first half of 1947 was only 700,000 bags, weighing some 800,000 kilograms, whereas her annual requirements are approximately 4,000,000 kilograms.

### Exports from Angola, by Principal Countries

	1945		1946	
	Tons	Contos	Tons	Contos
Total .....	314,689	637,563	398,631	962,251
Portugal .....	158,843	276,731	200,701	391,483
Other Portuguese overseas provinces.....	22,888	32,687	32,076	46,712
Africa (exclusive of Portuguese territories)	70,813	84,448	52,551	75,911
Asia (exclusive of Portuguese territories)...	.....	28	1,021	2,405
North America .....	19,179	60,995	33,536	121,355
South America .....	.....	.....	3,005	3,937
Europe .....	42,441	181,165	75,325	321,851

As indicated by the foregoing figures, exports to Portugal accounted for practically 50 per cent of the total volume exported. However, despite the fact that the volume exported to foreign countries (165,439 tons) is far below the volume of exports to Portugal, the value of exports to the former is much higher than that of exports to Portugal.

This apparently anomalous situation is not due to the quantitative difference in exports to Portugal and to foreign countries but to the fact that prices of exports to Portugal are fixed by economic co-ordination measures and, as a result, they are considerably below those obtained in foreign markets.

### Exports from Angola, by Principal Commodities

	1945	1946	1945	1946
	Tons	Tons	Contos	Contos
Sugar	37,227	43,959	43,616	51,775
Raw cotton	4,360	7,250	44,926	73,991
Peanuts	411	851	775	1,599
Rice	2,449	3,927	4,874	9,279
Asphalt	870	256	89	30
Rubber	1,199	850	17,983	12,408
Cocoa	103	396	463	1,309
Coffee (including beans unculled and ground)	30,927	46,489	91,501	184,052
Footwear (pairs)	15,135	18,347	448	600
Meat, smoked or otherwise prepared	163	214	1,470	1,924
Wax	1,328	1,926	18,379	29,270
Coconuts	11,305	12,981	14,243	21,702
Fish, canned	1,460	2,341	15,807	24,395
Hides and skins, raw	727	1,250	7,865	12,917
Copper ore	533	3,146	799	612
Manioc	10,883	20,291	8,176	22,039

### Industrial Production Expanding

The improvement in the economy of Angola is most clearly reflected in the progress made by various branches of industry in recent years. Abundance of certain raw materials, improvement in the supply of labour, the protective customs tariff and a favourable balance of payments with countries supplying Angola have encouraged the establishment or projection of new industries.

A new metallurgical plant at Benguela is producing hoes, nails, iron and steel foundry work, tools, etc. The value of production in 1946 is estimated at 925 contos, and stocks at the beginning of 1946 at 344 contos. A large textile mill, with a capital of 49,500 contos, 124 looms and 3,200 spindles, was established at Luanda. It is proposed to install 5,000 more spindles shortly, and plans are being made for further additions. At present, 40 Europeans and 600 natives are employed. The company plans to produce in the near future cotton goods that will be cheaper than those purchased abroad. This will greatly benefit Angola, which in 1946 imported piece-goods and other textile products to a value of 247,523 contos.

#### Output and Exports of Fish Products Higher

The canned fish industry, an important factor in Angolan economy, achieved an unusual measure of prosperity in 1946. At Benguela and Mozamedes, where the most important fisheries of the colony are located, there has been greatly increased activity during recent years, the landed catches being abundant. Despite the shortage of tin, the value of canned fish produced is estimated at 33,922 contos. In Mozamedes particularly, canning factories and fishing methods have been modernized. The combined Mozamedes and Benguela fishing industries sold the following quantities through their syndicate: dried fish, 533,202 bundles (53,304 contos); fish meal, 7,986 tons (22,480 contos); fish oil, 2,251 tons (9,753 contos).

Sales to foreign countries include dried fish to the Belgian Congo, fish meal to South Africa, and fish oil to Belgium. These countries absorb practically the whole of Angolan production.

### Bizonia to Import Substantial Quantities Of Raw Materials During First Quarter

*Of total of \$100,000,000 available, \$20,000,000 to be used to buy raw materials for the manufacture of consumer goods for domestic population—Funds accumulated from proceeds of exports—Purchases will comprise items essential to support German economy and to develop export program.*

By D. W. Jackson, Canadian Economic Representative

**F**RANKFURT, January 26, 1948.—The sum of \$100,000,000 has been earmarked for the purchase abroad of raw materials for the Bizonal Area of Germany during the first quarter of 1948, according to an announcement of the Joint Export-Import Agency (U.S./U.K.). Of this amount, \$20,000,000 is to be used to buy raw materials for the manufacture of consumer goods for the German population in the combined area.

The funds now made available have been gradually accumulated from the proceeds of German exports. No part of these proceeds has been withdrawn to pay for food or to reimburse the United States and

United Kingdom Governments for the enormous advances they have provided for food imports. Food imports as well as fertilizer, seed, petroleum, oil and lubricants are all bought from special appropriations made by the United States and British Governments.

The Verwaltungsamt fuer Wirtschaft, German Economic Administration, has been notified of the availability of the \$100,000,000 fund and is already working out a detailed schedule of items required to support the German economy and at the same time develop a greatly expanded export program which draws basic raw materials from this fund.

#### **Imports of Iron and Manganese Ores Included in Program**

Among the major items which are to be included in this program are iron and manganese ores required for the 1948 steel production schedule, anticipating an increase in output from current levels in the Bizonal Area of approximately three million to four million tons per year. A minimum outlay of \$5,500,000 will be required for this purpose.

Replacement parts for textile machinery, industrial diamonds, Oregon and Swedish pine for the shipbuilding industry, more than one million dollars worth of hides, goatskins and tanning materials, fibres for the handicraft and woodworking industries, ivory, ebony, felt and deer hides for the piano industry, plus a long list of ferrous alloys and non-ferrous metals, are included on the planned import list.

The final schedule of requirements will be procured under a decentralized procedure which entitles German official agencies and manufacturers to import commercial products for specific export programs. Such centralized procurement as is necessary, and overall supervision, will be exercised by the Joint Export/Import Agency. The new imports will serve as the foundation upon which the two zones will be able to build a vastly expanded foreign trade and thus speed up the combined area on the way to self-sufficiency.

---

#### **Countries Referred to in Trade Charts on Page 406**

**AFRICA (OTHER THAN BRITISH) AND MIDDLE EAST**, for trade statistical purposes, includes.—Abyssinia, Aden, Afghanistan, Algeria, Angola, Belgian Congo, Canary Islands, Cape Verde Islands, Egypt, Eritrea, French Cameroons, French Equatorial Africa, French Morocco, French Somaliland, French West Africa, Ifni, Iran, Iraq, Italian Somaliland, Lebanon, Liberia, Libya, Madagascar, Palestine, Portuguese East Africa, Portuguese Guinea, Reunion, Rio De Oro, Saudi Arabia, Spanish Guinea, Spanish Morocco, Syria, Tripoli, Tunisia, Turkey and Yemen.

**CONTINENTAL EUROPE**, for trade statistical purposes, includes.—Albania, Austria, Azores, Belgium, Bulgaria, Cyprus, Czechoslovakia, Denmark, Eire, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Latvia, Lithuania, Madeira, Malta, Netherlands, Norway, Poland, Portugal, Roumania, Russia, Spain, Sweden, Switzerland, Yugoslavia

Firms who can afford it frequently establish their own Export Department under a competent export manager, or, in smaller firms, an export clerk, who is responsible to a senior executive of the firm. The export manager looks after all phases of the export trade, and, if possible, visits the company's markets or a portion of them, each year or two, in order to maintain close relationship with their agents and customers abroad. (*See our ABC of Canadian Export Trade, page 18.*)

# South Africa Imported More Fish From Canada During Past Year

*Value of imports estimated at \$2,500,000 in 1947 as compared with prewar average of between \$350,000 and \$650,000—Salmon, sardines and herrings or pilchards most popular types of canned fish—Personal attention required by Canadian canners to develop permanent market.*

By D. S. Armstrong, Assistant Commercial Secretary for Canada

**J**OHANNESBURG, January 30, 1948.—Canada's trade with South Africa in fish—fresh, frozen, smoked, pickled and canned—reached an estimated \$2,500,000 in 1947, as compared with the prewar average of between \$350,000 and \$650,000. The increase is partly due to the almost complete dearth of imported fish products during the five years prior to 1947 and partly to the rise in prices of more than 100 per cent. On a volume basis Canadian exports were between 44,000 cwt. in 1935 and 77,000 cwt. in 1939 as compared with only 846 cwt. in 1944 and 7,356 cwt. in 1945 and an estimated 136,000 cwt. in 1947. Official statistics clearly illustrate the phenomenal price change that has occurred. On a value basis, one dollar would buy 11·8 pounds of Canadian fish in 1939 but only 5·5 pounds in 1947.

The three most popular types of canned fish are salmon, sardines and herrings or pilchards. An analysis of statistics of prewar years shows that between 1935 and 1939 shipments of canned salmon increased from 19,705 cwt., valued at \$170,198, to 34,559 cwt. valued at \$279,287; canned sardines increased from 19,479 cwt., at \$155,551, to 30,839 cwt., at \$277,659; canned herrings increased from 4,685 cwt., at \$31,789, to 11,340 cwt., at \$88,226. Canadian exports of sardines to South Africa in 1947, estimated at 34,672 cwt., more than equals those in 1939, but salmon fell to only 10 per cent of prewar figures. The difference is made up of herrings, exports of which are estimated at 94,490 cwt.

## Canadian Canned Fish Must Compete with Other Supplies

At the present time there are no restrictions on imports into South Africa from any country. Consequently Canadian packers and exporters must meet the competition of all nations able to make shipments of canned fish. In the past Canada has been very successful in meeting this competition. This is illustrated by the fact that Canada supplied South Africa with 45 to 50 per cent of her total import requirements. In the future, Canada's ability to meet competition will depend not only on quality and price but on good merchandising methods, as well as the allocation of sufficient quantities, particularly of salmon, to meet the demand.

Although Japan was an important supplier of the cheaper grades of canned salmon in prewar years, orders now are almost without exception being placed in Canada. In the past few months, however, because of the shortage, some buying has been done in the United States. With prices for salmon almost trebled, Canada cannot, under present conditions, expect to hold her prewar volume of sales for any length of time. The purchasing power of the average South African has not increased in proportion and therefore it is only natural to expect that he will turn to cheaper varieties—probably local types.

## Canada is Largest Supplier of Sardines

Canada is the largest supplier of sardines to South Africa but, unlike salmon, there is a good deal of competition particularly from Norway, Portugal and France. Canadian sardines, being cheaper than those from other countries, find a large market with South Africa's native population. Here again sardine prices have increased out of all proportion to the buyers' purchasing power. Thus under present conditions we cannot expect to maintain our prewar volume of sales if there are cheaper forms of food available. Norwegian brislings and silds are second in popularity but that country has not been able to fill the demand. In 1947 it is estimated that Norway shipped 25,000 cases to South Africa, but this was only 25 per cent of the orders placed, although "normal" demand is about 50,000 cases. Portuguese sardines maintained a high volume of sales to South Africa during the later war years when canned sardines were not available from any other source. Prices however, quadrupled between 1939 and 1945 and as a consequence some importers lost confidence in Portugal as a supplier. The latest South African statistics indicated that Portugal supplied 42,120 cases in 1945 while "normal" demand is reliably estimated at only 12,000 cases. It is interesting to note however, that in that year Portugal supplied 80 per cent of South Africa's total imports whereas in 1939 it supplied only 2.4 per cent. French sardines find a limited market in South Africa but because of price, the retail trade considers these as a luxury item. Normal imports are estimated to be between 2,000 and 3,000 cases annually.

The third most popular type of canned fish is herrings. In prewar years canned herrings and pilchards constituted 12 per cent of our total exports to South Africa. In 1947, however, the figure will be about 70 per cent due to the scarcity of canned fish of all types in South Africa, the small allocation of salmon, and the relatively free supply position of herrings in Canada. The South African market, however, is very near the saturation point at the present time and it is considered that buying will not be heavy in 1948. Considerable quantities of Pacific coast herrings were shipped from Canada in 1948 but the trade in South Africa did not consider these up to the usual standard of Canadian fish generally. In addition to Canada as a source of supply, herrings are imported from the United Kingdom and small quantities from Norway.

Although sardines in oil are far more popular than sardines packed in tomato sauce, herrings in oil are not volume sellers in the Union. The demand is for herrings in tomato sauce.

## Can Broguing and Vacuum Packing Source of Complaints

There are two aspects of Canadian fish canning methods which have given rise to a good deal of trouble and complications when they have been used in shipments to South Africa. These are broguing and vacuum packing. The South African law definitely prohibits the sale in the Union of tins which have been punctured and resoldered. Under sub-section J of Section 115 of the Public Health Act (No. 56) of 1919, a Government Gazette notice entitled "Unsound Foodstuffs" was published on May 16, 1933. This reads in part as follows: "(Any tin of foodstuffs) . . . which is damaged so that it leaks or otherwise becomes unsealed, or shows evidence of having been punctured and the puncture resoldered (may not be kept, sold, offered or exposed for sale)." No matter how ethical the practice of broguing may be in Canada, it can only lead to trouble if such tins are exported to the Union. The public health authorities, who are entrusted with the enforcement of this law, are unable, without a good deal of investigation, to determine definitely whether the broguing has been done locally or before arrival in the Union. If it is proved that the

**Canned salmon awaiting shipment from Vancouver. Canadian sales of fish to South Africa have greatly increased from the prewar average of between \$350,000 and \$650,000 to an estimated \$2,500,000 last year.**

puncturing was carried out in Canada, they still have doubts as to the reason for it. Some local authorities might have a chemical analysis carried out, but more likely the procedure would be to simply condemn the consignment as unfit for human consumption.

Vacuum packing is a desirable if not a necessary factor in fish canning to keep the ends of the tins collapsed and to reduce chemical activity. The effects of increasing temperature and increasing altitude are additive in destroying a vacuum. Consequently when canned fish, which is usually packed at sea level, is shipped to South Africa, it generally undergoes several temperature changes. Although this is an important feature which exporters sometimes overlook, far more serious situations often arise when the tinned fish is shipped to high-altitude inland areas. Some 60 per cent to 70 per cent of the buying population of South Africa lives at altitudes of from 3,000 to 6,000 feet. Johannesburg, Pretoria and the Reef centres (i.e. those cities and towns concentrated along the 60-mile length of the Witwatersrand gold mining area) at an average altitude of 5,500 feet, have a total population of well over 1,500,000, including almost 750,000 whites. Canadian fish packers and exporters might well give special attention to the ultimate destination of their shipments and increase the vacuum in those consignments destined to inland centres in South Africa.

The fact that insufficient thought has been given to this matter is borne out by the number of complaints that have been brought to the attention of Canada's Foreign Trade Office in Johannesburg. Few complaints have been lodged by importers in the coastal centres. Although a decrease in vacuum as a result of lower atmospheric pressure at high altitudes may not affect the contents of the tin, the mere fact that the can bulges or becomes a "flipper" does not enhance its appearance in the mind of the retail grocer or the housewife and it may make the municipal health inspector condemn the whole consignment on the grounds that it contains "blown" tins.

When canned fish was in short supply and a great demand existed in South Africa, merchants accepted offers and placed orders almost indiscriminately without reference to a sample or to suppliers' bona fides. This led to enough trouble to make importers more cautious in their buying methods. The supply position has now changed entirely and it is noticed that importers are definitely not in favour of placing orders with any overseas firm except actual packers through their accredited local agents. As offers from direct factory representatives become more frequent, buying through factor houses in Canada and other countries is bound to fall away. The development of a permanent market in South Africa by Canadian fish canners requires strict personal attention to export business.

## Canadian Exports for January Higher on Basis of Values

*Shipments totalled \$235,000,000, compared with \$208,000,000 in corresponding month last year—Sharp rise in exports to United States, and improvement in purchases by Great Britain—Pakistan makes appearance in monthly trade bulletin—Burma's independence recognized.*

**B**URMA has been transferred from the list of countries specified as "British" in the most recent monthly trade bulletin published by the Dominion Bureau of Statistics, and now appears under those specified as "foreign". However, as the total value of Canada's trade with Burma last year was only \$826,000, the change will have little effect on the geographical grouping. Pakistan has received recognition in this bulletin, as apart from India, though the value of Canada's exports to that country in January was only assessed at \$9,000, as compared with \$1,655,000 for India. It is more than probable that a proportion of the goods destined for India will find their way into Pakistan. Singapore and the Federation of Malaya are still grouped under the heading of British Malaya.

Canadian exports for the month of January were valued at \$235,400,000, which is quite a substantial advance over the corresponding figure for last year, amounting to \$208,600,000. Shipments to the United States rose sharply from \$79,453,000 in January, 1947, to \$104,999,000 last month. Exports to the United Kingdom were also higher, the respective figures being \$50,465,000 and \$64,948,000. Canada's trade with South Africa declined, however, from a value of \$6,174,000 in January, 1947, to \$4,128,000 last month. A similar situation developed with respect to Australia, exports having decreased from a value of \$4,362,000 last year to \$2,013,000 in January, 1948. This total is lower even than that for the corresponding month in 1938, when prices were less than those generally prevailing at this time.

Exports to the twenty Latin American republics were only 52 per cent of those for January last year, the respective totals being \$15,060,000 and \$7,878,000. The largest decline occurred in Canada's trade with Argentina. Shipments to Mexico were higher, on the other hand. Among the European countries, shipments to Czechoslovakia, Italy and Norway displayed a substantial improvement in value.

Any analysis of these trade statistics must necessarily be deficient, as the price fluctuations during 1947 had a material effect on the listed values. Until such time as comparative figures can be made available on the actual quantities of the various commodities exported to different countries, no indication of the trend of Canada's trade can be given.

**FAO Will Assume Allocation Functions**

Provision has been made for the food allocation functions of the International Emergency Food Council to be taken over by the FAO Council. The transfer will take place when a majority of the 35 member governments of IEFEC have approved a resolution by that body dissolving itself.

# Portugal Developing Transport And Communication Facilities

*Ports of Lisbon and Leixões being renovated, enlarged and re-equipped—Plans being studied for complete or partial electrification of railways—New ships ordered for merchant navy—Lisbon important in international aviation.*

By L. S. Glass, Canadian Trade Commissioner

(Editor's Note—This is the last of a series of articles on economic conditions in Portugal, the first two of which appeared in the January 17th and February 14th issues of *Foreign Trade*.)

LISBON, December 4, 1947.—During the war years, the port facilities of Portugal, particularly at the two main ports of Lisbon and Leixões, fell into bad repair, due primarily to the lack of necessary machinery and equipment. Both these ports are now being renovated, enlarged and re-equipped with modern up-to-date facilities. The country unfortunately lacks adequate deposits of coal, which means that fuel for the railways must be imported either as fuel oil or as coal. The Portuguese terrain is mountainous, and these two factors tend to increase cost of transportation, which in itself is a restraining factor on the amount of traffic which is offered. During the war years, practically no replacements of rolling stock or permanent way were available, and the condition of the rail transportation deteriorated badly. Plans are now under study for the complete or partial electrification of the Portuguese railways. This will depend to a considerable extent on the completion of the hydro-electric installations, but in the meantime considerable replacement and renovation of existing material is necessary.

Lack of repair materials have made it impossible for the roads of Portugal to be kept in good repair. Nothing of a spectacular nature is being undertaken in this respect, but gradual improvement is noted. Bids are now being called for the supply and erection of the long-talked-of suspension bridge over the river Tagus. Canadian firms have already been invited to tender on this important project.

## **Merchant Navy Important Adjunct to Economy**

Portugal's merchant navy is an important adjunct to the national economy, particularly for the movement of the produce of the colonies, and for imports into the continental territory from foreign countries. Although practically no losses were suffered during the war, the navy fell into disrepair, and no additions of any importance were made to the fleet. Portuguese shipyards are active and efficient, but have no facilities for constructing ships of more than a few hundred tons.

Portugal is now making up for lost time, and besides purchases of operating vessels, including some "Libertys", order for new ships have been placed with shipyards in the United Kingdom.

## **Lisbon Strategic Spot in International Aviation**

Portugal holds a very strategic spot in international aviation, with Lisbon the focal point for all traffic between the west and Mediterranean and Far East points. A modern and efficient airport has been constructed just outside Lisbon, capable of handling all international traffic. Civil air

agreements have already been signed with nearly every country operating international air services.

Although the Portuguese have always been among the pioneers of aviation, its development within the country has been almost negligible, with the exception of military and naval flying. Only one domestic civil line has been operated within the country, from Lisbon to Oporto, and this had to cease operating because of lack of traffic. Portugal is, of course, comparatively small, with a population of only eight and a half millions and a low average income. This reduces the number of the flying public, and with the improvement which is taking place in rail service, air services are more or less superfluous.

Private flying is but little developed, and air fields are few and really take the form of emergency rather than operational fields. In addition, they are not located conveniently for civilian flying. It is hard to say whether this has curtailed the development of private flying, or the lack of the flyer-owners has discouraged the construction of flying facilities. The low average income is also a deterrent, and it is felt that in the field of aviation a number of years must pass before any real development will take place.

Internationally, Portugal operates only one service to Madrid, but there has been activity in air services to and between the Portuguese African colonies. Regular services are now in operation, with the promise of further developments in the future. "Bush hopping" is also growing in the colonies as facilities increase, and, although sport flying is relatively rare, the numbers of owner-flyers are growing.

#### **Radio is Well Developed**

Radio is well developed in Portugal, where government and privately owned stations operate side by side on both medium and shortwave bands. Only standard receivers are in use, since television and F.M. have not yet arrived. Portugal has no important production of receiving sets, and practically all are imported. Before the war, Europe supplied the entire market, but recently American sets have been imported. These have been favourably received, although often they are not sufficiently selective to give the desired results when operating on the jammed waves of European stations.

With the exception of the urban telephone systems of Lisbon and Oporto, all communications within the country are a state monopoly. Radio, wireless and cable companies operate under a concession of the government. All messages for transmission are despatched through the post offices, and paid for to the Government who, after deducting the state tax, pay the companies for the service. Service is good, but the telephone systems have suffered from lack of equipment, and would-be subscribers must wait up to twelve months before apparatus becomes available for installation. There is a heavy demand, both for central stations and for telephone apparatus.

---

#### **"Tulipfestival" Advanced Due to Early Spring**

The Hague, February 17, 1948—(FTS)—Due to the fact that an early spring is expected in Northwest Europe, the "Tulipfestival" scheduled for May 18-21 in The Hague will be held from April 20-23. This festival was planned to take place in connection with the jubilee celebrations of Her Majesty the Queen of the Netherlands and the septcentenary of The Hague.

# South African Mines Purchased More Stores During 1946

*Total value of £44,080,478 compared with £33,532,618 in 1944 and £31,759,741 in 1943—Gold mines are main buyers accounting for 85.2 per cent of the total.*

By J. H. English, Commercial Counsellor for Canada

**J**OHANNESBURG, January 5, 1948.—An increase of over £10,000,000 in the value of stores purchased by the mines of South Africa for the year 1946 over the previous recorded year 1944 has been reported by the Union Department of Mines. Total value of 1946 purchases was £44,080,478 compared with £33,532,618 in 1944 and £31,759,741 in 1943. No figures were issued for 1945.

Due to the preponderant position of the gold mining industry, purchases by the gold mines in 1946 amounted to no less than £37,596,490 or 85.2 per cent of the total mines' purchases. Second in importance in the purchase of stores were the coal mines with a total of £4,035,217. This is a large increase from previous years and indicates greatly extended activity in coal mines during the past few years. Similarly an increase in purchases by the diamond industry to £822,968 from £287,855 in 1944 reveals a reopening of the diamond mines on a substantial scale.

## Purchases of Mines' Stores

Year	Gold mines	Diamond mines	Coal mines	Other mines	Totals
1946	£37,596,490	£822,968	£4,035,217	£1,625,803	£44,080,478
1944	28,665,251	287,855	2,412,562	1,437,372	32,803,040
1943	27,620,496	130,714	1,868,455	1,290,975	30,910,540
1939	31,941,921	264,743	1,556,465	800,360	34,563,609

## Large Percentage of Requirements Met from Local Sources

In keeping with the policy adopted some years ago, the mines purchase a large percentage of their requirements from local South African sources. This does not necessarily mean South African produced goods, although in practice, whenever goods of comparable quality and price are obtainable from South African manufacturers, they receive preference. In 1946 the value of supplies obtained from South African sources amounted to £34,949,291 and imports to £8,004,806. For the year 1944 the comparable figures were £27,241,088 for goods produced principally or wholly within South Africa and £5,561,952 for imports.

## Main Imports by South African Mines, 1946

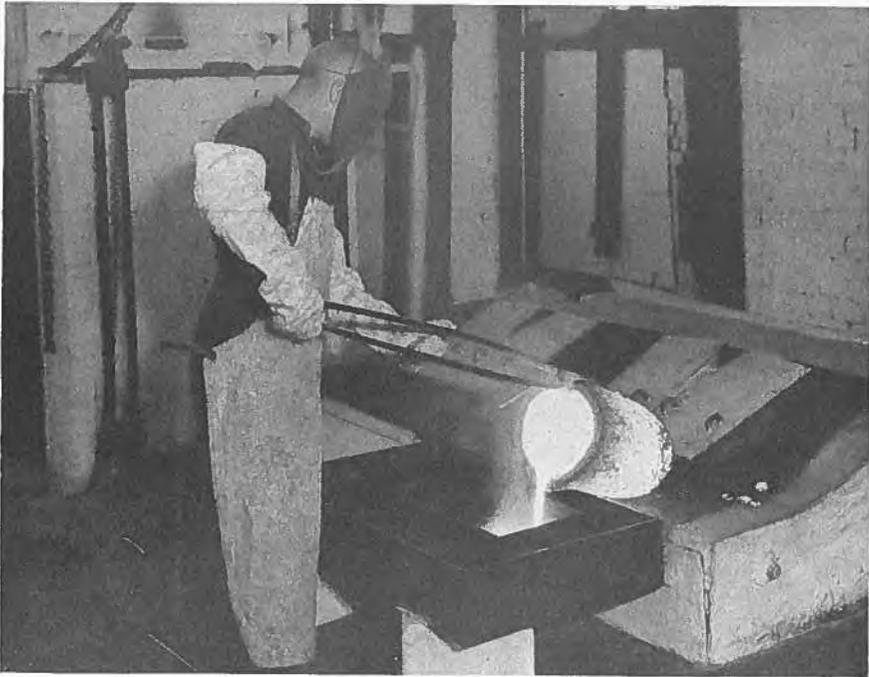

Item	Imported value	Total value
Brake linings	£ 10,293	£ 10,385
Chemicals—		
(a) Cyanide (100% NaCn)	387,586	752,600
(b) Other	104,843	291,619

## German Industrial Plants Made Available As Reparations to the Western Allies

The Allied Control Council has allotted to the Western Allies, through the Inter-Allied Reparation Agency (I.A.R.A.), the German plants listed below. Expressions of interest are being sought from the member governments of I.A.R.A. on which Canada is represented. The closing date for the submission of bids concerning these plants is listed in each case. Inventories of the plants in the present offering are in the hands of the Industrial Development Division of the Department of Trade and Commerce. All enquiries regarding these should be addressed to the Director of the Division.

- 1071—Polte Magdeburg at Duderstadt/Hannover. This plant was a part of the German ammunition industry. Machinery includes presses, lathes, annealing furnaces and milling machines. War damage is slight. Bid date, March 31/48.
- 1072—Metallwerk Odertal G.M.B.H. Bad Lauterberg/Harz. Plant was part of German ammunition industry. Machinery includes screw-cutting lathes, engine lathes and projectile mantle-point rolling machines. War damage is slight. Bid date, March 31/48.
- 1085—Deutsche Lufthansa A.G. at Lubeck-Travemunde S.-Holstein. Before the war this plant was engaged on the repair and rebuilding of passenger aircraft. Machinery includes drilling machines, lathes and grinding machines. War damage is slight. Bid date, March 31/48.
- 1092—VDM Halbzeugwerke G.M.B.H., Hildesheim/Hannover. Since the war this factory has been producing parts for electrical motors and castings for motor vehicles. Machinery includes tub furnaces, high power melting furnaces, engine lathes and grinding machines. War damage is slight. Bid date, March 31/48.
- 1122—Theodor Klatt at Brual/Hannover. This factory began production of exhaust manifolds during the war. Machinery includes engine lathes and bending machines. No war damage. Bid date, March 31/48.
- 1140—Karges Hammer Maschinenfabrik G.M.B.H. at Gifhorn/Hannover. This factory was engaged in the production of foodstuff and beverage machines. Machinery includes lathes, vertical milling machines. War damage is slight. Bid date, March 31/48.
- 1186—Feinmechanische Werkstätten A.G. at Hamburg/Schnelsen. Machinery includes lathes, horizontal milling machines and grinding machines. No war damage. Bid date, March 31/48.
- 1402—Elektron-Werk G.M.B.H. at Holzminden/Wiser. This firm is engaged in production of domestic electrical appliances. Machinery includes crank shearing machines, engine lathes, drawing presses and grinding machines. There is no war damage. Bid date, March 31/48.
- 1408—Francke Werke A. G. Bremen at Twistringen/Krs. Grafschaft Hoya. Prior to outbreak of war, this firm manufactured parts for aero engines, also small parts for water and gas works. Machinery includes centre lathes, milling machines and grinding machines. War damage is slight. Bid date, March 31/48.

## Trade Commissioners on Tour

**C**ANADIAN Trade Commissioners return periodically from their posts in foreign lands to familiarize themselves with conditions in this country and the special requirements of the commercial community. They are in a position to furnish information concerning markets in their respective territories and possible sources of supply. Exporters and importers are urged to communicate with these officers, when in their vicinity, with a view to establishing connections that will assist in the promotion of their particular commercial interests, now and in the future. Arrangements for interviews with these trade commissioners should be made directly through the following offices in the areas concerned:

### Ottawa—Foreign Trade Service, Department of Trade and Commerce

Calgary—Board of Trade.

Edmonton—Can. Manufacturers' Association.

Gananoque—Chamber of Commerce.

Halifax—Board of Trade.

Hamilton—Chamber of Commerce.

Montreal—Montreal Board of Trade.

Pembroke—Chamber of Commerce.

Quebec City—Board of Trade.

Renfrew—Board of Trade.

Saint John—Board of Trade.

Toronto—Can. Manufacturers' Association.

Vancouver—H. W. Brighton, Foreign Trade Service, Room 331, Marine Building.

Victoria—Dept. of Trade and Industry.

Windsor—Chamber of Commerce.

Winnipeg—Can. Manufacturers' Association.

W. G. Stark, former Commercial Secretary, Canadian Embassy, Lima, Peru, is at present making a tour of Canada. During the course of the next few months he will discuss trade of Peru and Ecuador with businessmen across the country.

### W. G. Stark

(Former Commercial Secretary, Canadian Embassy, Lima)

Montreal—February 23-March 10.

Pembroke—March 11.

Renfrew—March 12.

Ottawa—March 15-18.

## Postal Information

### Direct Parcel Post for Fiji Temporarily Suspended

Owing to lack of sailings on the direct route from Canada to Fiji, the direct parcel post service is temporarily suspended. Parcels will continue to be forwarded via the United States if prepaid for despatch by that route and endorsed accordingly.

To avoid pilferage, advertisements should not be placed on outer packing case, and it may also be advisable to place only the symbol of customer and port of destination on the case rather than name and address. When there is more than one case, they should be numbered consecutively with numbers agreeing with those on documents, invoices and bills of lading. The gross and net weight and cubic measurements should also be shown. All such information should be in indelible, clear-cut lettering, preferably in stencilled letters at least two inches high. Marks on unwrapped goods should be applied indelibly and conspicuously. Avoid the use of tags. (*See our ABC of Canadian Export Trade, page 19.*)

# Trade and Tariff Regulations

## Belgian Congo Exchange Regulations Amended

Leopoldville, January 3, 1948.—(FTS)—The Commission des Devises et des Importations of the Belgian Congo have announced that as from January 1, 1948, applications for import licences and the acquisition of exchange to pay for imports from Canada will be approved only in terms of Canadian dollars. Quotations and invoices for shipments to the Belgian Congo should, therefore, be prepared on that basis.

---

## Brazil Establishes Import Licence System

Rio de Janeiro, February 19, 1948.—(FTS)—The Brazilian Congress has passed an act providing for licensing all imports except essential foods, cement and pharmaceutical products. Approval of the act awaits presidential sanction which, it is understood, will be withheld until the methods of application and exemption are ready. The status of goods in transit is not yet known, but it is expected that they will be covered by executive action.

---

## Eire Announces Further Quotas for Hosiery and Electric Filament Lamps

Dublin, January 26, 1948.—(FTS)—Further quotas and quota periods have been announced by the Government of Eire for hosiery and electric filament lamps, as follows:

*Hosiery:* (other than half-hose) of silk or artificial silk—640,000 pairs, for the six-month period March 1, 1948, to August 31, 1948. The quota for the previous period (which was four months) was similar in amount to that now fixed.

*Electric filament lamps:* (100/250 volts, 1/1,500 watts)—50,000 articles, for the period March 1, 1948, to August 31, 1948. This amount is unchanged from the previous six months.

---

## Guatemalan Import Licensing Scheme Rescinded

Guatemala City, February 3, 1948.—(FTS)—Government authorities of Guatemala have, under a decree published February 3, rescinded the law creating an import licensing scheme. Licences, therefore, are not required for imports into Guatemala.

---

## Commercial Invoices for Shipments to Mexico Must Show Value of Goods

Mexico City, February 13, 1948.—(FTS)—The Mexican Government has clarified the method of determining the values of imported goods for the purpose of levying ad valorem duties. Under a decree effective February 9, 1948, commercial invoices accompanying merchandise for importation into Mexico must indicate the value of the goods at the place of purchase, without any deduction except for freight charges and insurance premiums, when these expenses are included in the invoice. If other expenses or charges are included in the invoice, their total will be distributed in proportion to the net value of each article covered by the invoice.

The statement regarding the exactitude of the value of merchandise must be signed by the consignee and must read as follows: "Declaro bajo protesta de decir verdad, que el precio consignado para las mercancías que

## Trade and Tariff Regulations—Continued

esta factura comprende, es el que las mismas tienen en el mercado del lugar de compra." (Translation—"I declare under oath that the price at which these goods are invoiced is that of their sale price at the place of purchase.")

In cases where no commercial invoice exists, or is not essential under the Customs Law, the value of merchandise will be determined at sight by the customs authorities, who will have access to bills of sale, statistics, catalogues or other documents which may assist them or, lacking these, will fix an estimated price.

When it may be suspected that the invoiced value of goods is not a true value, the same procedure as that indicated in the foregoing paragraph will be applied.

---

### South Africa Discontinuing Certain Forward Sales of Exchange

Johannesburg, February 13, 1948.—(FTS)—The South Africa Reserve Bank announced yesterday that it was immediately discontinuing forward sales of foreign exchange for all goods except capital and other essential supplies. The effect of this will be to transfer to importers of non-essential goods the risk of foreign exchange fluctuations. Dollars will still continue to be made available for current purchases. It is reported that the official opinion is that the new policy will not affect trade beyond making merchants nervous regarding forward commitments.

---

### Onions Now Available for Export from Egypt

Cairo, February 11, 1948.—(FTS)—Egypt has a surplus of 52,000 tons of onions from the new crop, available for export as from February 16, 1948, while further substantial supplies will be made available in the near future. No restrictions have been imposed on the shipment of these onions to any destination.

Canadian importers interested in this offering are requested to communicate directly with the Canadian Trade Commissioner in Cairo, whose address is listed in *Foreign Trade*. He will try to place them in touch with recommended suppliers and afford every possible assistance.

---

### Export Controls Reimposed on Cod Liver Oil and Calves' Stomachs

Effective on and after February 17, export permits are required for the export of the following items: cod liver oil; fish and marine animal oils; and calves' stomachs. As from the same date, export permits are no longer required for the export of boots, shoes and slippers; boot and shoe findings, principally leather; paperboard, over \$100; paper bags; paperboard boxes; and kraft paper.

Calves' stomachs were removed from export control on January 23, 1948. The Dairy Products Board of the Department of Agriculture pointed out, however, that this exemption from export permit control would prove detrimental to the supply of rennet used in the manufacture of cheese, and requested that control be reimposed.

A similar situation arose in fish oils and Wartime Prices and Trade Board requested reimposition of export control on fish and marine animal oils and cod liver oil.

## Ocean-Going Sailing Schedules

Information contained in the following list of sailings, such as destination, port of departure, loading date, name of ship and operator, is furnished by steamship companies and agents concerned. This is the latest available and subject to change after *Foreign Trade* has gone to press, particularly as this relates to the loading date and name of vessel.

The loading date and name of ship are not indicated in some instances, due to the fact that on certain routes information available is not sufficiently definite to mention the steamer that will be placed on a berth for the destination shown. The name of the probable operator is given, however, and exporters should seek further particulars from the operator or agent indicated.

### Departures from Halifax

\*Sails from Saint John about three days earlier.

The care exercised by Canadian firms in selecting the proper channels for distributing their products abroad is a major factor in their future export success. They can secure confidential guidance from the Foreign Trade Service, which is prepared to recommend suitable agents wherever these may be required. (See our *ABC of Canadian Export Trade*, page 13.)

## Foreign Exchange Quotations

The following are nominal quotations, based on rates available in London or New York and converted into Canadian terms at the mid-rate for sterling or par for United States dollars, as furnished by the Foreign Exchange Division of the Bank of Canada. These quotations may be found useful in considering statistics and prices generally, but Canadian exporters are reminded that the kinds of currency which may be accepted for exports to different countries are specifically covered by the Foreign Exchange Control Act and Regulations, and that funds may sometimes be tendered in payment for exports, which cannot, in fact, be transferred to Canada. Both importers and exporters are advised to communicate with their bankers before completing financial arrangements for the sale or purchase of commodities, to ensure that the method of payment contemplated is not only possible but that it is in accordance with the Foreign Exchange Control Act and Regulations.

# Foreign Trade Service

## Head Office Directory

The work of the Service is co-ordinated by an executive committee, of which the undernoted directors are members, and the Deputy Minister of the Department of Trade and Commerce is chairman.

Head office personnel, to whom requests should be addressed for specific information concerning their respective divisions, with local government telephone numbers in parentheses, are as follows:

### Trade Commissioner Service

Director, G. R. Heasman (2530)

Recruiting, training and posting of trade commissioners; direction and supervision of overseas officers; trade enquiries concerning countries and areas.

Assistant Director, H. W. Cheney (3058)

#### *Area Officers—*

*Asia*, G. S. Hall (5249)

*British Commonwealth*, (4404)

*Europe*, R. T. Young (4404); R. W. Rosenthal (7641); K. Nyenhuis (4404)

*Latin America*, A. Savard (7641)

*Area Traffic Officer*, W. J. Fisher (6236)

*Agricultural Specialist*, T. N. Beaupré (5249)

### Export Division

Director, W. F. Bull (6748)

General liaison with Canadian export industries; trade enquiries concerning commodities; maintenance of Exporters' Directory; administration of Export Permit Branch.

Assistant Director, G. A. Newman (5983)

Assistant to Director, A. E. Fortington (5670)

# Foreign Trade Service Abroad

Offices of the Canadian Trade Commissioner service are located in thirty-four countries. Trade Commissioners are responsible to headquarters in Ottawa for the development of commercial relations with many other countries within their respective territories, as set forth in the alphabetical list below.

It is recommended that prospective exporters and importers should communicate with the Director of the Trade Commissioner Service, in Ottawa, before discussing their various problems with Trade Commissioners, as much of the information required can be made available to them by officers at headquarters responsible for the various geographical areas.

## Canadian Certified Seed Potatoes

Growers, shippers and buyers of Canadian Certified Seed Potatoes may be interested in a brochure prepared by the Foreign Trade Service, in consultation with the Department of Agriculture, in an effort to stimulate the export sale of potatoes. Copies of this brochure, in colour, may be obtained from the Director, Trade Publicity Division, Foreign Trade Service, Department of Trade and Commerce, Ottawa.

# **Associated Agencies Concerned With Development of Foreign Trade**

## **Canadian Government Exhibition Commission**

107 Sparks Street, Ottawa  
Director, Glen Bannerman (3558)

Responsible for arrangements concerning participation by Canada in all exhibitions, display promotions and trade fairs outside Canada, and for international trade fairs held in Canada; advises individual firms in the display of their commodities in foreign countries.

Assistant Director, F. P. Cosgrove (7818)

## **Wheat and Grain Division**

Director, C. F. Wilson (5648)

Serves as the medium through which wheat, flour, and other cereal products are procured for other countries. It maintains a constant survey of Canada's grain position, respecting supply, transportation, domestic and export demand. The Director is secretary to the Wheat Committee of the Cabinet, and liaison officer between the Department of Trade and Commerce and the Canadian Wheat Board.

Assistant to Director, J. B. Lawrie (5830)

## **Canadian Commercial Corporation**

No. 2 Temporary Building, 70 Lyon Street, Ottawa

Managing Director, W. D. Low (3736)

Serves as a purchasing agent in Canada for governments of other countries, and for international bodies. Assists private enterprise in obtaining from ex-enemy territories essential supplies that cannot be obtained through ordinary commercial channels. Facilities of the Corporation are utilized in the purchase of supplies for the Department of National Defence and those required for defence projects. Cable address—*Cancomco*.

Secretary, J. D. McCarthy (4955)

Comptroller, G. F. Wevill (5316)

General Purchasing Agent, W. J. Atkinson (5767)

*Foreign Purchasing Section*, A. E. Annetts (5092)

## **Export Credits Insurance Corporation**

107 Sparks Street, Ottawa

General Manager, H. T. Aitken (2-4828)

Provides exporters with protection against the principal risks of loss involved in foreign trade, and insures them against the insolvency of the foreign buyer, protracted default in payment by the buyer when the goods have been duly accepted by him, and difficulties in the transfer of exchange, preventing the Canadian exporter from receiving payment for goods he has sold. Cable address—*Excredcorp*.

Chief Credit Officer, A. W. Thomas (2-4828)

Secretary, T. Chase-Casgrain (2-4828)
