OCTOBER, 1971

Audio-Visual Filmstrip Projector

Item 2477

Swedish firm offers under license the Canadian production and marketing rights to its audio-visual filmstrip projector consisting of a 16 mm still-picture projector with built-in screen and cassette tape recorder. Its most interesting feature is that the user can prepare his own filmstrips from ordinary 35 mm film reduced to 16 mm filmstrip in a special copying machine. Tones from the tape control the change of pictures and program-stop. Areas of application include schools, sales promotion, internal training in companies and organizations, etc. Literature available. See illustration.

Car Top Carrier

Item 2478

Canadian inventors offer under license the Canadian manufacturing and marketing rights to a new type of car top carrier. This carrier is equipped with special hinged rails which can be aligned with the normal stationary rails to provide a track for the carrier box to be moved on rollers down an inclined plane, thus permitting loading and unloading at street level. In folded position the hinged rails lock the box securely in place. The device can be used for carrying a tent trailer arrangement and has numerous other applications. Literature available. See illustration.

Pontoon Boat Kits

Item 2479

American inventor offers under license the Canadian production and marketing rights to his pontoon boat kits. Kits are designed to be assembled with lumber and steel drums obtained locally. No welding, brazing or knowledge of boat building required to assemble kits. The kits come complete with all hardware, drill bits, nuts, bolts, permatite joining rings, and a list of lumber and barrels needed. Modifications and custom designs can be devised from the basic kit. Literature available. See illustration.

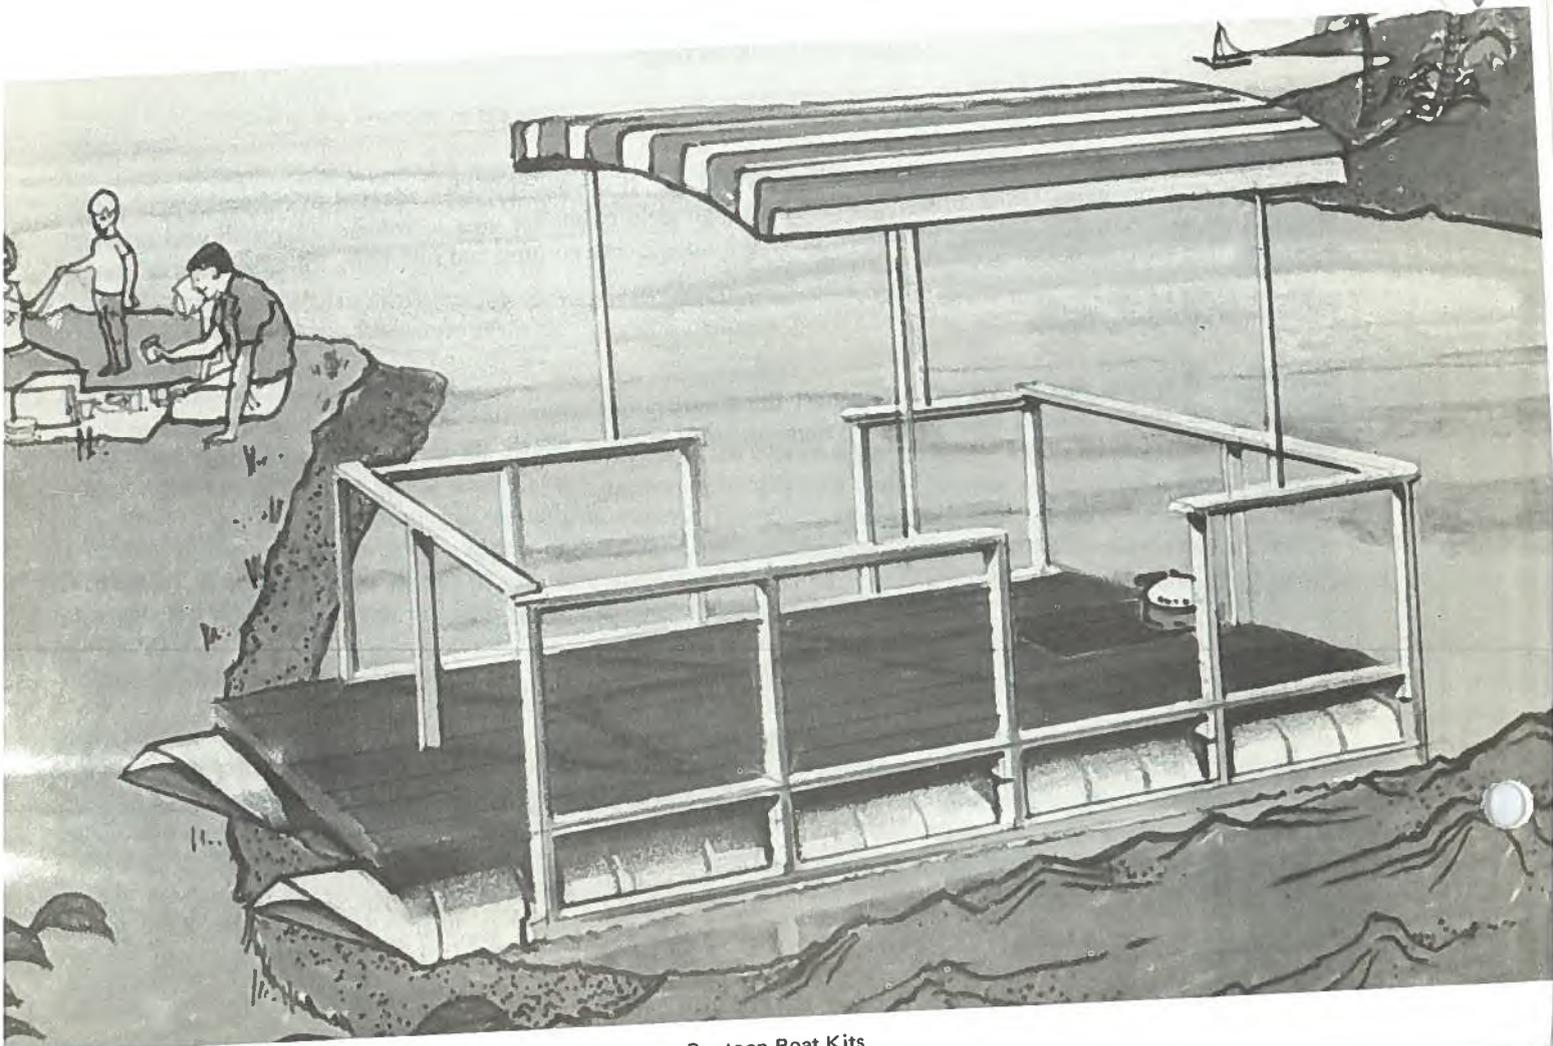

Activated Carbon

Item 2480

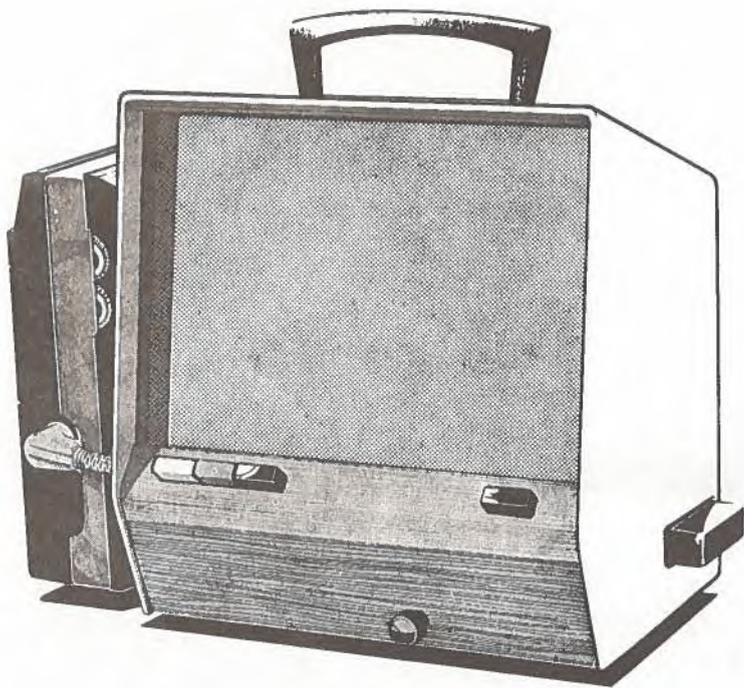

Japanese company offers under license the Canadian manufacturing and marketing rights to its method of producing activated carbon. The activated carbon is manufactured by a self-carbonization process from sawdust and lumber chips. The fields of application for the finished product, in granular or powder form, include decolorization, deodorization and/or refining of pharmaceuticals, chemicals, water, foods, etc. Literature available.
