FOREWORD

The Radio Equipment List (REL) is an Industry Canada publication, listing radio equipment which has been certified for use in Canada.

Certification of radio equipment means that the equipment complies with established Radio Standards Specifications, or general technical requirements, in accordance with Radio Standards Procedure 100. A certificate of Type Approval or of Technical Acceptability is issued accordingly. A licence to operate the equipment, where applicable, is required separately and is granted solely on the basis of the existing radio environment, type of service and location of operation.

The REL is up-dated and re-issued four times per year. Departmental offices across Canada are kept informed of new certifications and changes.

AVANT-PROPOS

La Nomenclature du Matériel Radio (NMR) est une publication d'Industrie Canada qui donne la liste du matériel radio pour lequel un certificat a été délivré pour utilisation au Canada.

La certification du matériel radio signifie que ce matériel répond aux exigences des cahiers des charges établis sur les normes radioélectriques ou aux exigences de normes techniques générales, en conformité de la Procédure no 100 sur les normes radioélectriques. Un certificat d'Homologation ou d'Acceptabilité Technique est délivré selon le cas. S'il y a lieu de le faire, une licence en vue de l'utilisation de matériel certifié est exigée séparément et accordée seulement après étude du milieu radioélectrique ambiant, du genre de service radio existant et de l'emplacement de la station.

La NMR est mis à jour et rééditée quatre fois par année. Les bureaux du Ministère, à l'échelle du pays, sont informés régulièrement du nouveau matériel radio certifié et des changements apportés aux inscriptions.

EXPLANATION OF COLUMN HEADINGS

1. Model/Type Number - This is the model or type number assigned to the equipment by the manufacturer for identification purposes.

Note: Where sub units of equipment are required to make up a given receiver or transmitter, all of the model numbers involved are grouped together as one model number. The individual model numbers of the sub units are separated by an oblique stroke. Radio frequency power amplifiers are only approved with an associated exciter and are listed only as combined units.

2.(a) Type-approval Number - This is the certification number assigned to each piece of equipment which has been granted certification under an established Radio Standards Specification. This number incorporates three distinctive parts; namely, the company code assigned by the Department, the specification number and its issue number, and a sequentially assigned number. For example, in Part A, for RSS 119, we have the number 100193997I. The first part of the number shows the assigned company code, in this case (100). Company codes may be of three or four digits. The next three digits (193) indicates the Radio Standards Specification 119 and its issue number 3, being the last two digits of the specification and its issue number. The following part is the sequentially assigned number, in this case (997), indicating the number of certifications granted under this issue of the Specification.

PARTIE K

La Partie K comprend le matériel radio, exempt d'une licence d'opération, qui a fait l'objet d'une délivrance de certificat d'Acceptabilité Technique, selon les exigences de normes techniques générales, en conformité de la Procédure no 100 sur les Normes Radioélectriques.

PARTIE L

La Partie L comprend le matériel radio, utilisé comme émetteurs d'annonces de faible puissance exploités dans les bandes de fréquences de radiodiffusion AM/FM, qui a fait l'objet d'une délivrance de certificat d'Acceptabilité Technique, selon les exigences de la Circulaire de la Réglementation des Télécommunications CRT-74, en comformité de la Procédure no 100 sur les Normes Radioélectriques.

EXPLICATION DES EN-TÊTES DE COLONNE

1. No. Modèle/Type - Ceci est le numéro de modèle ou de type attribué au matériel par le fabriquant aux fins d'identification.

Remarque: Dans le cas où il faut utiliser plus d'un sous-élément de matériel pour composer un récepteur ou un émetteur particulier, tous les numéros de modèle des divers composants sont groupés pour n'en former qu'un seul et ils sont séparés par une oblique. Les amplificateurs de puissance RF ne sont approuvés qu'en combinaison avec un excitateur connexe et ils ne sont inscrits qu'en tant que matériel combiné.

2.(a) No. d'Homologation - Ceci est le numéro attribué à chaque appareil qui a fait l'objet d'une certification, en conformité d'un Cahier des Charges sur les Normes Radioélectriques. Ce numéro est composé de trois parties distinctes; notamment, le code de compagnie attribué par le Ministère, le numéro du cahier des charges et son numéro d'édition, et un numéro séquentiel. Par exemple, dans la Partie A sous le CNR-119, on peut trouver le numéro d'homologation 100193997I. La première partie du numéro nous indique le code de compagnie attribué; dans le cas présent, (100). Les codes de compagnies peuvent être de trois ou quatre chiffres. Les trois chiffres suivant (193) nous indiquent le cahier des charges no 119 et sa 3e édition, représenté par les deux derniers chiffres du cahier des charges et son numéro d'édition. La partie suivante est le numéro attribué par ordre numérique (997) indiquant qu'il s'agit de la 997e certification accordée en comformité de ladite édition du cahier des charges en question.

In some cases one or more suffix letters are also added to the type-approval number. These letters are required to indicate such aspects as duty cycle etc., as stated in certain specifications.

2.(b) Technical Acceptability Number - This is the certification number assigned to each piece of equipment which has been granted certification under general technical requirements, in accordance with Radio Standards Procedure 100. This number incorporates three distinctive parts; namely, the company code assigned by the Department (first three or four digits), the REL Part identification letter, and a sequentially assigned number of three or four digits.

Class - Technically accepted equipment is assigned an equipment classification code number to identify the type of service for which the equipment is certified. The code is made-up from one selection from each of the following two tables:

Table I - *Type of Equipment*

1. Aircraft Station
2. Ship / Coast Station
3. Land Station
4. Broadcast Station
5. Miscellaneous Equipment

Table II - *Type of Service*

15. Auditory Assistance
16. Data / Scrambling / Voice Communications
17. Spread Spectrum Transmission
18. Global Positioning System (GPS)

20. Wireless Intercom

Dans certains cas, une à quatre lettres sont placées en suffixe du numéro d'homologation. Ces lettres sont requisent pour indiquer certains aspects d'utilisation du matériel, conformément à certaines spécifications.

2.(b) Numéro d'Acceptabilité Technique - Ceci est le numéro attribué à chaque appareil qui a fait l'objet d'une certification, selon les exigences de normes générales, en conformité de la Procédure no 100 sur les Normes Radioélectriques. Ce numéro est composé de trois parties distinctes; notamment, le code de compagnie attribué par le Ministère (indiqué par les premiers trois ou quatre chiffres), la lettre d'identification de la Partie de la NMR, et un numéro attribué par ordre numérique.

Classe - Cette colonne indique le code de classification attribué à l'appareil et sert à identifier le genre de service pour lequel il est certifié. Elle s'applique seulement au matériel radio qui a fait l'objet d'une délivrance d'un certificat d'Acceptabilité Technique. Le code est composé selon une sélection tiré de chacun des deux tableaux suivants:

Tableau I - *Type de Matériel*

Note: An asterisk (*), prefixing a type-approval or technical acceptability number, indicates a new or amended entry.

3. Occupied Bandwidth and Type of Emission - The necessary bandwidth and type of emission is indicated as described by the International Telecommunications Union (I.T.U.).

4. Power - The R.F. power output is indicated in various orders of magnitude of the unit of Watt. For single-sideband suppressed carrier emissions, the power is expressed as peak envelope power (PEP); for single-sideband full carrier emissions, the power is expressed as carrier power (one quarter of the PEP referred to above).

5. Frequency Range - This is the range of frequencies over which the equipment is designed to operate and shows the low and high limits respectively.
