II. REPORT OF A. C. HUSTMAN

FISH (SALMON) MANAGEMENT

1951

REPORT NO. II. Report on Tagging of Salmon - 1951.

By A. G. Huntsman

On the basis of experience from the tagging of 1950, it was decided to have all the tagging done by Miss Lillian R. King, who had the advantage of checking the tagged fish held in one of the ponds, which we did together. The results of the checking done in May and October have been summarized in Appendix 14 of Report for 1951 on Fish (Salmon) Management. Her fish had twice as high a mortality as those tagged by Thos. Chisholm, but had only about a sixth as many of the tags come off. It was believed that, with the knowledge of what had happened, with a sample of the dorsal fin of a salmon with the pin of the tag placed in the right position and with sufficient time to operate well, she would be able to get a very good result.

The cheek tags were not sufficiently promising to seem to warrant at this stage the adoption of a different method than that in use. Also, it would be necessary to get a very large number of tags and operate over a considerable period to have any prospect of economical and efficient tagging. No attempt was made, therefore, to try out the stronger pliers which had been furnished during the year by the makers.

Miss King carried out all the tagging with the assistance of Mrs. Myers for recording. From November 19 to 28, 1050 salmon were tagged, the numbers handled on successive days being, with the omission of Sunday, November 25, as follows: 90, 102, 110, 124, 127, 114, 118, 120, 145. Of three-year-old fish from the ponds, 1,003 were tagged, 85 being placed in the retaining pond and the remainder placed in Shubenacadie Lake at the boat landing. Of five-year-old fish from the ponds, 43 were tagged, 15 being placed in the retaining pond and the remainder released in the lake as above. There were only four salmon to be tagged from the trapping for hatchery purposes. The three-year-old salmon were on the average 10.6 inches long. The numbers of the various lengths in quarter inches from 6 to 14-3/4 were: 1, 0, 1, 0; 2, 1, 5, 0; 2, 2, 5, 9; 15, 17, 65, 49; 93, 105, 133, 75; 84, 71, 86, 39; 49, 39, 29, 16; 9, 7, 7, 0; 0, 0, 0, 1. The five-year-old salmon had an average length of 14.5 inches.

The details of the salmon tagged are as follows:

Three-year-old "Sebago" salmon from ponds. Tagged with small tag with "Biolog". Liberated at Boat Landing.

November 19th, 1951.
