FOREWORD

We are pleased to introduce the 1984 edition of Selected Trends. In 1981 our Ministry began to publish this series to provide the criminal justice community and the Canadian public with the most recent statistical data on criminal justice -- statistics which highlight major trends in crime and its impact, in criminal justice programs, and in criminal justice expenditures.

This year we have expanded the publication to include some of the findings from the Canadian Urban Victimization Survey, which was carried out by the Ministry Secretariat with the assistance of Statistics Canada. These are the most extensive Canadian data ever available on the victim's experience and perceptions of crime and the criminal justice system.

We also have added a good deal more information about Ministry programs. We have done this in order to illustrate what has been done and what can be done to reduce crime and the fear of crime in Canada.

This document, we trust, will serve to inform the continuing debates about, and our collective efforts towards, the achievement of humane, effective, and equitable criminal justice.

INTRODUCTION

This publication provides an overview of a number of major trends related to the Canadian criminal justice system -- trends in crime and its impact, trends in persons processed, trends in criminal justice expenditures, and trends in criminal justice programs.

The information presented is intended to highlight some of the more significant and measurable developments in Canadian criminal justice; the trends are truly "selected."

HOW MUCH CRIME IN CANADA?

I. CRIME TRENDS (UCR)

Most experts in criminal justice statistics have treated with caution the last twenty years of UCR (Uniform Crime Reporting) data, which have shown a steadily increasing crime rate. There are unresolved questions about reporting and counting practices for example, which cast doubt on the reliability of this information. Although caution must be exercised when using the UCR data as the sole indicator of crime rates in Canada, these statistics have been the main source of national information on the extent of reported crime.

OFFENCE RATES

1962-1981

- Total offence rates almost tripled between 1962 and 1981, from 4287.1 to 11,782.2 offences per 100,000 Canadians.

GRAPH 1

ALL OFFENCES, RATES PER 100,000 CANADIANS, 1962-1981

Source: Statistics Canada, Crime and Traffic Enforcement Statistics, Annual, Catalogue 85-205, 1962-1981.

- In the 1962-1981 period, both violent⁽¹⁾ and property crime rates increased steadily. Violent crimes, however, remained a small proportion of the total (less than 7%), while property crimes were much more frequent (around 50% of the total).

GRAPH 2

- (1) We are using the expression violent crimes because of conventional usage. However, this is something of a misnomer given that many so-called violent crimes (e.g., armed robbery) result in no actual injury and many property crimes indeed involve violence even if directed only at property.

IN RECENT YEARS

In Canada, over the 1977-81 period, offence rates per 100,000 population changed as follows:

- Total offence rates went up 23.3%.
(Criminal Code, Federal and Provincial Statutes, and Municipal By-Law violations).
- The rates of Criminal Code offences increased 26.2%.
(violent, property, and other offences).
- The violent offence rates showed a 15.1% increase.
(homicide, attempted murder, sexual assault, assault, and robbery).
- The property offence rates showed a 29.9% increase.
(break and enter, theft of motor-vehicle, theft, possession of stolen goods, and fraud).

**PROPERTY
& VIOLENT
CRIMES**

COMPARISON BETWEEN 1977 AND 1981

In both years, around 50% of all crimes were property crimes; and violent crimes were about 6% of the total.

GRAPH 4

VIOLENT AND PROPERTY CRIMES AS A PERCENTAGE
OF TOTAL CRIMES, CANADA, 1977 AND 1981

Source: Statistics Canada, Crime and Traffic Enforcement Statistics, Annual, Catalogue #85-205

In both 1981 and 1977, assault was the most frequent violent offence. The assault category includes wounding, assault causing bodily harm, and assault on a police officer.

GRAPH 5

PERCENTAGE DISTRIBUTION OF VIOLENT CRIMES, CANADA, 1977 AND 1981

Source: Statistics Canada, Crime and Traffic Enforcement Statistics, Annual, Catalogue #85-205

In both 1981 and 1977, theft (over \$200, \$200 and under) was the most frequent property crime, followed by break and enter.

GRAPH 6

PUBLIC PERCEPTIONS OF CRIME

The February 1982 Gallup National Survey (Canada) included questions on the views held by the public regarding the extent of crime in Canada. These views were then compared to police occurrence statistics. Most Canadians see serious crime as more of a problem than available statistics suggest.

- Canadians vastly overestimate the proportion of crime which involves violence. More specifically, almost three-quarters of the respondents said that at least 30% of all crimes committed in Canada involved violence, and many believed that the figure was much higher. Official statistics show that in 1981 for example, violent offences represented only 5.7% of the total reported to the police.
- Canadians think that murders increased in recent years; in fact, murders declined. Almost two-thirds of the respondents thought that murder had increased since capital punishment was abolished, but data on homicide and murder show a slight decrease both in numbers and rates since 1976.
- Canadians also think that offenders released on parole are more likely to commit crimes of violence soon after release than they actually do. Close to two-thirds of the respondents stated that at least 40% of the people released on parole commit violent crimes within three years of their release, and many believed that this proportion was much higher. The official figure is about 13%.

II. CRIME - CANADIAN URBAN VICTIMIZATION SURVEY

The Canadian Urban Victimization Survey, conducted in 1982, provides information concerning the extent of reported and unreported crime during 1981, the impact of criminal victimization, public perceptions of crime and the criminal justice system, and several other important themes. The data were obtained through telephone interviews with about 60,000 adults, randomly selected, held in seven Canadian urban centres: Greater Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax-Dartmouth, and St. John's. Eight types of incidents were studied, grouped under two major headings: Personal Crimes (sexual assault, robbery, assault, and personal theft) and Household Crimes (break and enter, motor-vehicle theft, household theft, and vandalism). This survey was funded by the Ministry of the Solicitor General and conducted in cooperation with Statistics Canada.

<p>UNREPORTED INCIDENTS</p>
--

The Canadian Urban Victimization Survey reveals that in the seven Canadian cities, more than half (58.5%) of the incidents described to interviewers were never brought to the attention of the police.

- The crime most likely to remain unreported was theft of personal property (71% unreported).
- The crime least likely to be unreported was theft of a motor vehicle (11% unreported).

The most common reasons why victims did not report to the police were:

- Victims thought that the offences were too minor. This was mentioned in 2/3 of the incidents in which no report was made.
- Victims believed that police could do nothing about it anyway (61%).
- Victims thought that it was too inconvenient to report the crime (24%).

AGE & SEX OF VICTIMS

Risk of victimization is closely tied to age and sex.

- Contrary to popular belief, the elderly are not more likely to be victimized than other age groups. Those under 25 are the most frequent victims of personal offences. As age increases, rates of victimization decrease for all crime categories.
- Women are seven times more likely than men to be victims of sexual assault, and they are also more likely than men to be victims of theft of personal property.
- Men are almost twice as likely as women to be victims of robbery or assault.

COSTS OF VICTIMIZATION

The costs of victimization are not only financial; however, financial losses are the most easily quantifiable. The Canadian Urban Victimization Survey provides financial loss data, using mean gross and mean net losses. The mean gross loss represents the average of total costs of all incidents, including those covered by insurance. The mean net loss, much lower, is the material costs to the victim after recovery obtained from insurance companies.

ECONOMIC LOSS - BY TYPE OF INCIDENT

- Mean gross loss was greatest for motor-vehicle thefts (\$3,512), followed by losses from break and enter (\$1,142) and robbery (\$576). Mean net losses for these same offences were \$459, \$655, and \$315 respectively, pointing to a high recovery in cases of motor-vehicle thefts.

ECONOMIC LOSS - BY SEX OF VICTIM

- both male and female victims suffered material losses in 70% of the incidents against them. For males, the mean net loss was \$226 compared to \$216 for females.

ECONOMIC LOSS - FAMILY INCOME AND AGE OF VICTIM

- Elderly respondents had the lowest mean annual family income of any age group in the seven cities surveyed (\$12,611). For this age group, gross material losses represented 2.5% of family income, and net material losses represented 1.4%. For people in the other age groups (including teenagers living with their parents), mean family incomes were over \$20,000, and gross losses were no higher than 1.6% of that income; net losses were half that amount or less.

The actual dollar figure should not blind us to the suffering that financial loss can entail. Obviously, the financial impact of victimization falls most heavily on those with lower or fixed incomes. Lower income families are less likely to be able to recover their losses and, even if they do make some recovery, the waiting period is likely to produce significant hardship. Second, financial costs represent only one small measure of the impact of victimization. The physical and the emotional costs are of even greater importance in many instances.

PHYSICAL COSTS

Of the approximately 1,600,000 victimization incidents reported in the seven cities, fewer than 350,000 could be classified as involving personal contact with the offender. Nevertheless, these resulted in 50,500 nights in hospital and 405,700 days lost due to some form of incapacitation. About 10% of those who were victims of assault, robbery or sexual assault had to seek some form of medical or dental attention. While serious injury was relatively rare, again the costs of victimization fall more heavily on some than on others, for example, on those who have only basic medical coverage and of course on those who are physically frail and vulnerable.

We know that the victims of some offences are more likely than others to be seriously injured. Victims of sexual assault, in particular, were more likely to be injured and when injured were more likely to require medical attention. We know, too, that the costs of such offences run far deeper than the physical or financial.

Source: The Canadian Urban Victimization Survey, 1982.

III. CRIMINAL JUSTICE COSTS

It is very difficult to ascertain how much governments spend on criminal justice. Some difficulties arise in compiling full cost data, because information must be gathered from all levels of government - federal, provincial and local - and from all components of the justice system.

In the past twenty years, the Canadian Criminal Justice System has undergone striking changes. The absolute level of spending for criminal justice services has risen dramatically. Relative increases, however, have remained small. Many of the costs discussed in this section reflect activities which are not directly related to crime. Much police work, for example, is devoted to various forms of social service. The data in the following pages provide our best approximations of how much is being spent for the full range of criminal justice services.

**FEDERAL, PROVINCIAL
& LOCAL EXPENDITURES
(GROSS AMOUNTS)**

TOTAL EXPENDITURES - POLICE, COURTS, AND CORRECTIONS -
BY LEVEL OF GOVERNMENT

- Between 1961-62 and 1980-81, total gross expenditures for the administration of justice increased at all government levels, whether federal, provincial, or local.

GRAPH 7

GROSS EXPENDITURES⁽¹⁾ FOR THE ADMINISTRATION
OF JUSTICE, ALL LEVELS OF GOVERNMENT,
CANADA, 1961-62 TO 1980-81⁽²⁾

- (1) Federal and provincial expenditures are reported per fiscal year, but local expenditures are reported per calendar year.
 (2) 1980-81, forecast expenditures.

Source: Demers, D.J. Criminal Justice Administration Expenditure in Canada: Examination of Recent Trends, Solicitor General Canada, 1979 (unpublished, update in progress)

TOTAL EXPENDITURES - FEDERAL, PROVINCIAL, LOCAL
- BY TYPE OF EXPENDITURE

- Police costs have consistently accounted for the biggest share of criminal justice expenditures, followed by corrections and courts expenditures. Since the 1970's, the gap between police and other types of costs has become even more evident.

GRAPH 8

GROSS EXPENDITURES ON POLICE, COURTS, AND CORRECTIONS,
CANADA, 1961-62 TO 1980-81

Source: Demers, D.J. Criminal Justice Administration Expenditure in Canada: Examination of Recent Trends, Solicitor General Canada, 1979 (unpublished, update in progress).

GROSS EXPENDITURES - POLICE - BY LEVEL OF GOVERNMENT

- From 1971 to 1980, law enforcement costs have consistently made up over 90% of local expenditures for the administration of justice. The amounts spent by local governments on police services were more than those spent by the federal and provincial sectors combined.

GRAPH 9

GROSS EXPENDITURES - POLICE(1), BY LEVEL OF GOVERNMENT,
CANADA, 1961-62 TO 1980-81

- (1) Provincial and federal expenditures are recorded per fiscal year, but local expenditures are recorded per calendar year.
- (2) No breakdown by activity until 1971. Forecast expenditure for 1979-80.
- (3) Forecast expenditure for 1980-81.

Source: Demers, D.J. Criminal Justice Administration Expenditure in Canada: Examination of Recent Trends, Solicitor General Canada, 1979 (unpublished, update in progress).

GROSS EXPENDITURES - CORRECTIONS - BY LEVEL OF GOVERNMENT

- Throughout the 1961-62 to 1980-81 period, corrections costs have made up roughly 40% of provincial expenditures and about 60% of federal expenditures for the administration of justice. At both levels, corrections costs have increased over the past twenty years.

GRAPH 10

GROSS EXPENDITURES - CORRECTIONS⁽¹⁾, BY LEVEL OF GOVERNMENT, CANADA, 1961-62 TO 1980-81

- (1) Provincial and federal expenditures are recorded per fiscal year, but local expenditures are recorded per calendar year.
- (2) Forecast expenditure for 1980-81.
- (3) Forecast expenditure for 1979-80 and 1980-81.
- (4) Courts and Corrections expenditures are not broken down. Local expenditures were not subdivided by activity until 1971.

Source: Demers, D.J. Criminal Justice Administration Expenditure in Canada: Examination of Recent Trends, Solicitor General Canada, 1979, (unpublished, update in progress).

GROSS EXPENDITURES - COURTS - BY LEVEL OF GOVERNMENT

- ° From 1961-62 to 1980-81, court expenditures have consistently accounted for slightly less than 30% of provincial gross expenditures, and a little over 10% of federal gross expenditures for the administration of justice. Throughout this period, court expenditures have increased at both the federal and the provincial levels.

Source: Demers, D.J. Criminal Justice Administration Expenditure in Canada: Examination of Recent Trends, Solicitor General Canada, 1979 (unpublished, update in progress).

FEDERAL GOVERNMENT EXPENDITURE (CONSTANT DOLLARS)
--

- During the 1961-1980 period, the federal expenditures for the administration of justice rose from 80 millions to slightly over 400 millions of dollars. In 1980, total federal spending on police, courts, and corrections (adjusted to the Implicit Price Index) was \$16.85 per Canadian. In 1961, it was \$4.38 per Canadian. Throughout the 1961-1980 period, the federal expenditures for the administration of justice has consistently been less than one half of one per cent of the Gross National Product.

CRIMINAL JUSTICE SYSTEM PROCESSING

I. ADULTS CHARGED, AND JUVENILES BROUGHT TO COURT

**ADULTS
CHARGED**

Data on persons charged are influenced by a number of factors such as the incidence of crime, and police and prosecutorial practices. Although not the reflection of any one phenomenon, these charge data are an important indication of the pressures on the criminal justice system, particularly on the courts.

- In 1981, for violent offences, there were 8.2% more adults charged per 100,000 Canadian adults than in 1977.
- For property offences, there were over 27.5% more adults charged per 100,000 Canadian adults in 1981 than in 1977.

GRAPH 13

<p style="text-align: center;">JUVENILES BROUGHT TO COURT</p>
--

The number of juveniles who appear in court depends on the operation of provincial legislation in the area of child welfare. For example, the enactment in 1979 of the "Loi sur la protection de la jeunesse" in Québec had a great influence on the flow of juveniles through the courts in that and the following years. This and other changes in provincial legislation would modify the quantitative and qualitative characteristics of the data.

- In the 1977 to 1981 period, the majority of children brought to court (ranging from 62 to 77%) were in the 12-15 age group. Most children found delinquent (62 to 78% range) also belonged to this category.
- Juveniles aged 16 and 17 formed between 18 and 36% of those brought to court and those found delinquent in any of those years.

GRAPH 14

PERCENTAGE DISTRIBUTION OF JUVENILES BROUGHT TO COURT,
BY AGE, CANADA, 1977 AND 1981

- Sources: (1) Statistics Canada, Juvenile Delinquents, Annual, Catalogue #85-202
 (2) Statistics Canada, Canadian Centre for Justice Statistics Juvenile Delinquents, 1980, 1981, Annual

- The rates of court cases involving violence were slightly higher where 16 and 17 year olds were concerned than when children 12-15 were considered. Children younger than this latter group were very rarely seen.
- The 12-15 age group predominated in cases of property offences. Young people aged 16 and 17 were involved much more often than children under 12.

 (2) Statistics Canada, Canadian Centre for Justice Statistics, Juvenile Delinquents, 1980, 1981, Annual.

II. SENTENCES AND DISPOSITIONS

Court statistics for all of Canada were last published for 1968; data for all provinces except Quebec and Alberta are available up to 1973. Since then, for complex reasons, there have been no national statistics on court activities. The new Canadian Centre for Justice Statistics will not be able to provide systematic, national data on these court issues until later in this decade.

<p>PUBLIC PERCEPTIONS OF SENTENCES</p>

The February 1982 Gallup National Survey (Canada) asked questions to assess the views of the Canadian public on the use of imprisonment as a sentence for selected crimes. These views were later compared to the best available official statistics. Because of the lack of recent national sentencing data, this study is not definitive, but does identify important issues in the consideration of public perceptions of the criminal justice system.

In the Gallup survey, the respondents were asked to estimate the percentage of people receiving incarceration sentences for assault causing bodily harm, break and enter, and robbery. It is clear that for all three offences, the courts are seen as sending fewer people to prison than, in fact, they do. Furthermore, the courts are seen as making only slight differentiation among these offences, when in fact, the difference in the treatment of these offences is dramatic:

- Depending on the actual offence, between 55% and 83% of the respondents saw the courts as acting more leniently than official statistics suggest.
- People did see robbery as resulting in more jail sentences than break & enter and assault. Almost three-quarters of the respondents perceived imprisonment rates for robbery as at least 60%, but nobody in this group thought they reached 80%. In fact, these rates are 85-90%.
- Slightly more than half of the respondents perceived imprisonment rates for assault as under 30%, but this sentence is handed down 36-41% of the time.
- Over half of the respondents thought that convictions for break and enter resulted in incarceration in less than 30% of the cases. The official figure is 55%.

<p>PUBLIC PERCEPTIONS OF PAROLE RELEASES</p>
--

The Gallup survey also asked for an estimate of the percentage of inmates released on parole before the end of their sentences. The answers show that the Canadian public sees the parole boards as releasing a much higher proportion of people than they actually release. The fact that people do not differentiate between parole and mandatory supervision releases may partly explain these over-estimates.

- ° Almost two-thirds of the respondents thought that at least 60% of all prisoners were released on parole before their sentences expired. The "official" percentage is 30-39%.

III. ADULT FEDERAL CORRECTIONS

GROWTH IN
PENITENTIARY
POPULATION

1950-1982 (BY YEAR)

ABSOLUTE NUMBERS: It is important to examine absolute numbers for operational purposes, because the growth in the number of inmates must be translated into accommodation.

- Between 1950 and 1982, the penitentiary population slightly more than doubled, an average of 170 inmates being added each year.
- From 1950 to 1964, an almost straight line growth can be observed; a stabilization shows from then until 1971 at which point the line moves rather steadily upward.

GRAPH 17

CANADIAN PENITENTIARY POPULATION, 1950-1982

Source: Ministry of the Solicitor General,
Correctional Service of Canada,
Operational Information Services.

INCARCERATION RATES: It is important to examine incarceration rates for analytic, planning, and policy issues; these remove the effects of the growth of the general population, thus exposing the amount of change which may be explained in terms of other social variables.

- Between 1950 and 1982, the rate of incarceration (number of federally incarcerated persons per 100,000 adults in the Canadian population) increased by 9.7%.
- The rate increased rather steadily until 1964 when it reached its highest point in the whole period. The rate then decreased until the early seventies and reached another high in 1973 and 1974. Except for these two years, the penitentiary incarceration rate has remained relatively stable (around 52 to 56) since 1968.

GRAPH 18

CANADIAN PENITENTIARY INCARCERATION RATE,
PER 100,000 ADULTS IN THE CANADIAN POPULATION,
1950-1982

Source: Ministry of the Solicitor General,
Correctional Service Canada,
Operational Information Services.

1980-1982 (MONTHLY CHANGES)ABSOLUTE NUMBERS:

- On March 31, 1982, the male on-register penitentiary population reached 10,150 persons, an increase of 7.4% over the previous year. On January 25, 1983, the count was 6.3% higher, at 10,787.

1982-83 ESTIMATE

- If the present rate of increase continues for the rest of fiscal year 1982-83, the male on-register population will surpass 10,900, a 7.5% increase for the year.
- At that point, the capacity of the Canadian penitentiary system will exceed optimum population levels.

**ADMISSIONS
AND
RELEASES**

The penitentiary inmate population is of course a function of the balance between the number of admissions and the number of releases. Large differences between admissions and releases correspond to appreciable movement in the penitentiary population. Simply, if more come in than go out, penitentiary population increases.

GRAPH 19

PENITENTIARY POPULATION, ADMISSIONS, AND
RELEASES, CANADA, 1950-1982

Source: Ministry of the Solicitor General,
Correctional Service Canada,
Operational Information Services.

ADMISSIONS

- In 1981, 27.4% of 5,257 admissions were returned to penitentiary after an unsuccessful conditional release (parole or mandatory supervision).
- Fewer than 10% (9.9) were returned after commission of a new indictable offence.
- The remainder either committed a summary conviction offence or were in violation of terms of their release.
- For every 10 readmissions, 3 were on full parole, 7 on mandatory supervision.

RELEASES

- In 1981, approximately 55% of releases were by way of the mandatory supervision program (inmate released after two-thirds of sentence completed, assuming good conduct).
- Approximately one-third of releases were made through the parole program (inmate considered for release by the National Parole Board after one-third of sentence served).
- In 1981, approximately 13% of inmates in penitentiaries were serving their time on day parole (inmate required to return to the institution or to a community centre from time to time, or to return after a specified period).

REVOCATION RATES, PAROLE AND MANDATORY SUPERVISION RELEASES
(as of June, 1982)

- From 1970 to 1978, revocation rates of federal full parole decisions varied depending on the types of violations involved. For offence violations (due to the commission of a new offence), revocation rates declined steadily until 1976 and then stabilized around 12%. For technical violations (without a new offence), revocation rates remained relatively stable throughout the 1970-78 period. These trends have resulted in a fairly even distribution between these two revocation types. (Data for 1979, 1980, and 1981 should be considered with caution: many of the persons released in those years have not yet completed their period of supervision).

GRAPH 20

PERCENTAGE OF FULL PAROLES REVOKED,
TECHNICAL AND OFFENCE VIOLATIONS, CANADA, 1970-1981

Source: Ministry of the Solicitor General,
Correctional Service Canada,
Operational Information Services.

- From 1970 to 1978, revocation rates of releases under mandatory supervision were also different for each type of violation. Revocation rates for offence violations declined markedly while revocation rates for technical violations increased steadily. These trends have resulted in the two types of violations each accounting for about half of the total number of revocations. (Many of the offenders released in 1979, 1980, and 1981 are still under supervision.)

NATIVES IN FEDERAL PENITENTIARIES

A. THE PERCENTAGE OF NATIVES SERVING TERMS IN
PENITENTIARIES, 1981. (MALE INMATES)

NATIVES IN THE GENERAL POPULATION

- ° The term Natives encompasses all persons who identify themselves as Indians, Métis, or Inuits.
- ° According to data from the June 1981 Census of Canada, Natives are not evenly distributed throughout Canada.

In terms of absolute numbers, they are found mainly in Ontario, British Columbia, Saskatchewan, and Manitoba.

In terms of their proportion of provincial populations, the highest concentration of Natives is found in the Northwest Territories, followed by the Yukon and Saskatchewan. The smallest proportions are in Québec, Ontario, and the Maritimes.

FEDERALLY INCARCERATED NATIVES

- ° The largest absolute number of incarcerated Natives is found in the Prairie Region (Correctional Service Canada (CSC) boundaries - Northwest Territories, Alberta, Saskatchewan, Manitoba and Northwest Ontario).

GRAPH 22

FEDERALLY INCARCERATED NATIVES, BY REGION⁽¹⁾
OF INCARCERATION, CANADA, 1981

- (1) C.S.C. regions consist of the Atlantic (Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick), Québec, Ontario (minus Northwest Ontario), Prairie (Manitoba, Saskatchewan, Alberta, Northwest Ontario), and Pacific (British Columbia). The Yukon and Northwest Territories have no penitentiaries, and inmates from these tend to be incarcerated in the Pacific, and Prairie regions.

Source: The Research Group, Comparative Statistics, Native and Non-Native Federal Inmates, December, 1981.

- Not surprisingly, a very small proportion of the Canadian population is in federal penitentiaries (less than .3%) and this is true of both Natives and Non-Natives. Nevertheless, there are proportionately more Natives incarcerated in all regions except Québec.
- The Prairies and the Maritimes have the highest proportions of Natives incarcerated.

GRAPH 23

PERCENTAGE OF NATIVES INCARCERATED, AND PERCENTAGE OF NON-NATIVES INCARCERATED, BY REGION⁽¹⁾ OF INCARCERATION, CANADA, 1981

(1) C.S.C. regions consist of the Atlantic (Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick), Québec, Ontario (minus Northwest Ontario), Prairie (Manitoba, Saskatchewan, Alberta, Northwest Ontario), and Pacific (British Columbia). The Yukon and Northwest Territories have no penitentiaries, and inmates from these areas tend to be incarcerated in the Pacific or Prairie regions.

Source: The Research Group, Comparative Statistics, Native and Non-Native Federal Inmates, December, 1981.

B. THE PERCENTAGE OF PENITENTIARY INMATES WHO ARE NATIVES, 1977-1981

ALL OF CANADA

- Between 1977 and 1981, Natives (Indians, Métis, Inuit) made up 8 to 9% of the total male penitentiary population.
- For females (Kingston Penitentiary for Women), this percentage varied between 13.5 and 20%; however, this proportion is based on a much smaller total number of inmates (around 200 people).

GRAPH 24

NATIVES AND NON-NATIVES AS A PERCENTAGE OF MALES IN PENITENTIARIES, 1977-1981

MINISTRY INITIATIVES

The statistical information and trends depicted in this report serve two major purposes. First, public debate on criminal justice matters must be supported by the best available research and statistical information. The federal Ministry of the Solicitor General is committed to providing such information. Second, such material is obviously important in informing policy and program directions and decisions.

I. MINISTRY INITIATIVES: VICTIMS

INFORMATION

- The Canadian Urban Victimization Survey (1982), conducted in seven major cities, provides the most extensive Canadian information yet produced concerning the extent of reported and unreported crime during 1981, the impact of criminal victimization, public perceptions of crime and the criminal justice system, and other important concerns. The survey was funded by the Ministry of the Solicitor General and implemented in cooperation with Statistics Canada with the support of provincial and municipal officials in the seven cities.
- Studies to assess victim needs are underway in Vancouver and Richmond, B.C., in Prince Edward Island, in Restigouche, N.B., and in Newfoundland. Such research will assist in the development of services for crime victims. Other studies are also being conducted by this Ministry to evaluate existing programs.

FEAR OF CRIME

Our public surveys have shown us that Canadians are concerned about crime, and according to recent polls, urban Canadians consider the reduction of crime as a relatively high priority. The Canadian Urban Victimization Survey data have shown that Canadians typically perceive crime rates to be high and rising. At the same time, the Survey and other polls have shown that fear of crime, for example fear of walking alone after dark, is not so pervasive as media accounts would have it. The majority of Canadians are not preoccupied with fear of crime. Fear of crime is largely concentrated among those who are or perceived themselves to be socially or physically vulnerable and, for some, this fear can be debilitating, obviously diminishing the quality of their lives. The CUVS found, for example, that elderly people and women were more likely than others to express such fears, although elderly people were relatively rarely victimized by the offences included in the Canadian Urban Victimization Survey. Fear of sexual assault no doubt feeds much of the more general fear women express. While the rates of sexual assault are relatively low compared to other offences, the nature and consequences of such an offence have merited special policy attention.

VICTIMS OF SEXUAL ASSAULT

- A recent amendment to the Criminal Code of Canada, replaces the offence of rape with three degrees of sexual assault based on the extent of harm or injury to the victim. Whereas in the past, by definition, charges of rape could be laid only if the victim was a female, with the new amendment the gender of a victim of sexual assault is not at issue. It is clear under the new definition that husbands have no special immunity from prosecution. The new laws of evidence severely restrict the types of questions which may be put to a complainant, including questions about prior sexual conduct, either with the accused or with others. Finally, victims of sexual assault are not obliged to report the offence immediately after an incident occurs.

**THE VICTIM'S
PERSPECTIVE**

Survey data and research increasingly reveal the often unexpected impact of less serious offences as well. For example, aside from the obvious financial costs of property offences such as break and enter, many victims also suffer crisis reactions generally assumed to arise only with more violent crimes. The violation of the home frequently produces feelings of anger, fear and distrust. Some victims encounter inconveniences and difficulties in pursuing their cases through the criminal justice system.

Over the past decade, initiatives related to victims of crime have become a top priority within the federal Ministry of the Solicitor General. The Ministry and other federal departments have actively supported demonstration and research projects to improve victim assistance. Several programs have been set up and policies reviewed to emphasize the victims' perspective in the criminal justice system.

**THE YOUNG
OFFENDERS ACT**

- The Young Offenders Act can be viewed as a model for the kinds of initiatives developed in order to make the victim a beneficiary of the Court process. This Act establishes the authority of the Court to impose reparative sentences instead of focussing solely on punishing the offender. For example, the Young Offenders Act allows a judge to require that the offender pay a certain amount of money to the victim of his/her crime or provide other compensation, in time or in services. The offender can also be ordered to provide restitution or to engage in community services.

**EXISTING
PROGRAMS**

- The Ministry is at present funding the John Howard Society Victim Assistance Program in Vancouver, the Edmonton Police Department Victim Services Unit, the Calgary Police Department Victim Services Unit, the

Winnipeg Police Department Victim Assistance Program, the Kitchener/Waterloo Police Victim Assistance Program, the London Family Crisis Unit, the Ottawa Salvation Army Victims' Aid Program, and has supported many others. All these programs have in common their dedication to improve the response by the criminal justice system to victims and to enhance community awareness of and participation in this effort.

<p>COORDINATED POLICY</p>

- In 1981 Cabinet approved the undertaking of a joint initiative by the federal Department of Justice and the Ministry of the Solicitor General to assess victims needs and to promote improved services for victims of crime. In concert with the provinces a Federal/Provincial Task Force on Justice for Victims of Crime was formed late in 1981. In its report, published by the Ministry, the Task Force made 79 specific recommendations to improve services to victims.

II. MINISTRY INITIATIVES: CRIME PREVENTION

Of course, no greater help can be given victims than protection against their re-victimization, an aspect of crime prevention. Crime prevention programs have been developed and implemented by the Ministry of the Solicitor General in cooperation with other federal departments, the Canadian police community, provincial and municipal governments, and community representatives.

Because such programs depend on citizen participation and cooperation with the police, their development has also involved informing the public on how to prevent crime. The Ministry is developing an approach to crime prevention which is sensitive to local conditions and resources, which encourages local control and responsibility and which at the same time, uses the knowledge gained from programs carried out across the country.

The first Crime Prevention Week in November 1983 and the Solicitor General's Awards provided opportunity for all Canadians to learn more about what they and their communities can do to work with the police to prevent crime, and an opportunity as well to honour Canadians who have been working towards these ends. Crime Prevention Week and the Solicitor General's Awards will continue as annual events to maintain and nurture citizen and community involvement and participation in Crime Prevention.

<p>PREVENTION OF PROPERTY CRIMES</p>
--

All our statistical information indicates that most crimes are property crimes. Most prevention programs focus on these offences.

- ° There are three types of community-oriented projects operating in many areas throughout the country:
 1. Operation Identification for residential communities,
 2. Operation Provident for the business sector, and
 3. Neighbourhood Watch, or neighbours looking out for neighbours.
- ° The first two projects ask community members to mark their property with a unique series of numbers that identify goods belonging to a specific individual or business. Properly marked property is difficult for burglars to sell and can be more easily traced back to owners, once identified as stolen.
- ° In a Neighbourhood Watch Program neighbours watch over others' property especially during periods when risks of burglary are known to be highest. Any suspicious activity is reported to the police. For the program to be effective, each resident must take an active role in both security improvement and observation.

SUCCESS DEPENDS ON THE DEGREE OF PARTICIPATION

- ° 1979 - PORTAGE LA PRAIRIE, MANITOBA

An R.C.M.P. analysis of the crime situation in Portage La Prairie, Manitoba indicated a growing number of residential and commercial break-and-enters. Consequently,

the R.C.M.P. launched a crime prevention program. Both Operation Identification and Operation Provident were initiated. Seven months after implementation, it was found that:

1. business break-and-enters had decreased 68%, and
2. residential break-and-enters had decreased 48%.

Through 1980 and 1981,

3. offences against businesses continued to decrease,
4. offences against residences slightly increased.

However, MOST BUSINESSES AND RESIDENCES THAT HAD BEEN BROKEN INTO HAD NOT PARTICIPATED in the program. Participation in either one of these prevention programs can prevent burglaries.

PARTICIPATION CAN BE INCREASED

- The preliminary findings of the Canadian Urban Victimization Survey indicate that with a concerted campaign it is possible to get the participation of at least 25% of the population in a given city, and much higher rates in some neighbourhoods within cities.

<p>PREVENTION OF VIOLENT CRIMES</p>
--

Violent crimes are a small percentage of total offences, but this does not make them any less serious when they do occur. Their occurrence can be reduced by minimizing risks.

Ministry efforts related to the prevention of violent crimes have focussed on the distribution of information and advice to police departments and the general public. Information on the following topics is available:

1. what to do if attacked
2. what kinds of routes to avoid when walking alone
3. how to assist strangers without endangering oneself
4. what to expect if resisting an assailant
5. what to tell the police about a suspect.

Our data have shown that although women are less likely than men to be victims of assault, they are more likely to be victims of domestic assault or even a series of domestic assaults. Their fears of revenge by the offender, their concerns about how others might treat their problems, and often their economic dependence all increase their vulnerability. The federal Ministry of the Solicitor General has funded a number of projects on wife battering. One of these stands out for its prevention aspects.

* 1980 - THE COORDINATING COMMITTEE ON FAMILY VIOLENCE,
LONDON, ONTARIO

This committee, formed of representatives from the criminal justice system, social service agencies, and other professional groups likely to be called upon by battered women, has used federal funding to gather information on wife battering in London. Because of the need for a coordinated effort, the Committee has involved the local police, Provincial Crown prosecutors, Justices of the Peace, Judges, Probation Officers, representatives from the local transition house and mental health and social services.

As a result primarily of the work done by the Coordinating Committee and the Senate Investigation into Family Violence, the London Police Department has implemented a policy in which police officers must charge spouses in those cases where there is evidence of physical abuse. The Calgary Police Department has adopted the same policy.

The Committee has also lent its support to a number of other initiatives:

- °° better information to women about their rights and the services available to them

- °° better information to physicians and other professionals, to improve their responses in cases of wife battering
- °° the establishment of a treatment centre for men who beat their wives.

CRIME PREVENTION AND YOUTH

Almost all data sources have consistently shown that a disproportionate amount of crime is committed by young people. Crime prevention initiatives designed for them have included:

1. special programs developed by police departments to prevent youth from coming in conflict with the law, to facilitate police liaison with social agencies dealing with juveniles, and to promote participation in the prevention of juvenile crime
2. youth employment opportunities created and funded by private enterprise and the public sector
3. existing programs extended to special needs groups (i.e. Natives and persons in remote, northern areas)
4. community-based projects such as counselling, supervised recreational activities, and social support networks offering help and guidance to young people.

CRIME PREVENTION INITIATIVES HAVE HAD POSITIVE EFFECTS

- 1978 - THE SAINT JOHN YOUTH PROJECT, NEW BRUNSWICK

The Saint John Youth Project was started by the police chief, in cooperation with the City of Saint John and the federal Ministry of the Solicitor General. Three programs were involved:

- °° The School Liaison Program, in which police officers patrol school property, participate in extra-curriculum activities, meet with staff and make formal class presentations on subjects ranging from alcohol and drug abuse to descriptions of the criminal justice system.

- The Diversion Program, which refers first offenders (non violent, property delinquencies) to a community-based program involving voluntary settlement agreed to by the victim, the community, the young offender and his/her parents.
- The Community Support Program, which encourages citizens to spend time with young people who have been in conflict with the law or are experiencing personal problems.

An Advisory Committee, with representatives from appropriate government, community and private agencies, was also set up to support the Saint John Youth Project.

After almost 2 years of operation, it was found that the project had been successful in

- a) improving the liaison between social agencies and the police department
- b) increasing the acceptance of the Youth Division of the Saint John Police Department both by the public and by police officers outside this division
- c) reducing school vandalism reported to police and the number of juveniles charged in Family Court.

- THE YOUTH EMPLOYMENT PROGRAM, ALL ACROSS CANADA SINCE 1976

The federal Ministry of the Solicitor General has been involved in the planning and management of a range of summer employment projects for youth across the country. These are associated with provincial corrections, provincial, regional and municipal police forces and private agencies. They provide young people with training and experience while working in their communities. A majority of the projects directed by this Ministry are in the area of community crime prevention. Community interest and support have been positive.

THESE AND OTHER MINISTRY PROJECTS CONFIRM THAT CRIME PREVENTION CAN BE MADE TO WORK, AND THAT THE BEST APPROACHES REQUIRE SHARED RESPONSIBILITY - A COMMITMENT FROM ALL LEVELS OF GOVERNMENT, VOLUNTARY ORGANIZATIONS, THE COMMUNITY AND INDIVIDUAL CITIZENS.

III. OTHER MINISTRY INITIATIVES

Victims of Crime and Crime Prevention have been two high priorities of the federal Ministry of the Solicitor General. Future issues of Selected Trends in Canadian Criminal Justice will focus on other priorities such as Natives and criminal justice, Enterprise Crime, Corrections Policy, and Policing in the eighties.

(2) Statistics Canada, Estimates of Population by Sex and Age for Canada and the Provinces, Annual, Catalogue #91-202
(3) Statistics Canada, Crime and Traffic Enforcement Statistics, Annual, Catalogue #85-205.

NOTE: All rates in this table are calculated per 100,000 general population. Rates published in Statistics Canada publication Crime and Traffic Enforcement Statistics, Annual Catalogue #85-205 prior to 1970 were calculated on the population aged 7 and over.

TABLE 2

SELECTED TYPES OF INCIDENTS REPORTED AND NOT REPORTED
TO THE POLICE, IN NUMBERS⁽¹⁾ AND PERCENTAGES,
SEVEN CANADIAN CITIES, 1981

TYPE OF INCIDENT	REPORTED TO THE POLICE		NOT REPORTED TO THE POLICE	
	NUMBER	%	NUMBER	%
PERSONAL OFFENCES				
Sexual Assault	6,600	38	10,600	62
Robbery	22,100	45	27,200	55
Assault	99,000	34	187,000	66
Personal Theft	103,000	29	247,000	71
HOUSEHOLD OFFENCES				
Break & Enter	146,000	64	82,000	36
Motor-Vehicle Theft	21,500	89	2,700	11
Attempted M.-V. Theft	6,800	42	9,300	58
Household Theft	186,000	44	232,000	56
Vandalism	74,000	35	139,000	65

(1) Numbers under 50,000 rounded to nearest 100, and others rounded to nearest 1000.

Source: The Canadian Urban Victimization Survey, 1982

TABLE 3

REASONS FOR NON REPORT TO THE POLICE, BY TYPE
OF REASON, SEVEN CANADIAN CITIES, 1981

REASON	FREQUENCY(1)	%
Too Minor	606,000	66
Police Couldn't Do Anything	563,000	61
Inconvenience	224,000	24
Nothing Taken	179,000	19
Personal Matter	123,000	13
Reported to Another Official	109,000	12
Negative Attitude of Police	74,000	8
Protect Offender	60,000	6
Fear Revenge	40,000	4
Number of Incidents Unreported	937,000	58 of total

(1) Numbers rounded to nearest 1000.

Source: The Canadian Urban Victimization Survey, 1982

TABLE 4
TOTAL INCIDENTS⁽¹⁾, IN NUMBERS AND RATES PER 1,000
POPULATION/HOUSEHOLDS, BY TYPE OF INCIDENT AND SEX OF VICTIM,
SEVEN CANADIAN CITIES, 1981

TYPE OF INCIDENT	TOTAL NUMBER ⁽²⁾	RATES PER 1,000 POPULATION/HOUSEHOLD ⁽³⁾		
		TOTAL	MALES	FEMALES
PERSONAL OFFENCES				
Sexual Assault	17,200	3.5	0.8	5.8
Robbery	49,400	10.0	13.0	7.0
Assault	286,000	57.0	79.0	39.0
Personal Theft	350,000	70.0	66.0	74.0
HOUSEHOLD OFFENCES				
Break & Enter	227,000	94		
Motor-Vehicle Theft	40,600	17		
Household Theft	417,000	172		
Vandalism	213,000	88		

- (1) Reported and not reported to the police.
(2) Numbers under 50,000 rounded to nearest 100, and others rounded to nearest 1,000. These may not be consistent with totals in other tables because of rounding.
(3) Rates are calculated per 1,000 population for personal offences, and per 1,000 households for household offences. Total male population = 2,357,000, total female population = 2,618,900, and total households = 2,424,900.

NOTE: The statistical data on juveniles processed by the police vary substantially depending on the procedures, definitions and rules used for recording juvenile offenders. In 1979, these counting practices changed appreciably, and an increase in juvenile criminal activity was recorded. In that year, the rates of juveniles dealt with by the police (per 100,000 juveniles in Canada) for delinquencies with violence increased tremendously (183%); they reached a peak in 1980, and decreased slightly (19.6%) in 1981. For delinquencies against property, the 1977-81 period was also marked by a high increase (123%), most of which occurred in 1979. These changes were almost entirely due to modifications to the administrative procedures.
